

Topics for discussion: Higher-order kernels session

at “Taming the accuracy of event generators”, CERN, June 29 - July 03, 2020

1. higher order kernels and logarithmic accuracy (one zoom room w/ ER, PM)
what's the effect of recoil prescriptions (ER, PM)
2. relation to fixed-order subtraction and matching (one zoom room w/ SP)
relation between MSbar-like factorization and shower evolution scheme (SP)
3. veto algorithm with negative weights (postpone to Friday?)
4. accessing parton shower uncertainties (postpone?)

of course, discussion on other topics very welcome!
