Next steps: organisation

Are "we" sufficiently representative of the European lattice community?

- ● Would a new mailing list be useful (GDPR?!) via opt in …. Is the "lattice hadrons" mailing list reasonable

How should we organise an executive structure to provide an external-facing community view to feed in to decisions on policy, hardware etc.

- ● How would this be formed?

Later: **if** community access is realised can we agree to distribute resources within the community a la USQCD?
