

# Wrap-up

Ray Veness

# Actions

- What to do with the extra year?
  - Do we delay the installation in the LHC?
  - Do we delay the deliverables from HL-UK2?
- Where/if do we test different gases (N<sub>2</sub>/Ne)
  - HEL test stand?
  - LHC?
  - What other equipment do we need?
- Signal to noise
  - We need to agree on a clear definition
  - What was this value in the LHC during run 2 (ions/protons)
  - What do we expect in run 3
  - What do we expect in the final instrument (better location?)

# Actions

- Cooling the image intensifier
  - Still on the 'to-do' list...?
- Optical systems
  - We need to make a plan of what is available and when, and where we want to use them
- Pumping speed and pumps for the v3 system
  - Sit down and agree what is needed
- Acceptance criteria
  - Missing re-definition of the curtain variation across thickness
  - How to define a profile?
- Can we make a silicon microchannel gas jet?
  - And if so, who?
- Specification for the BGV
  - Gas density and variation.
