

# First Measurement of Double-Differential Charged Current $\nu_{\mu}$ -Argon Scattering Cross Sections in Kinematic Imbalance Variables

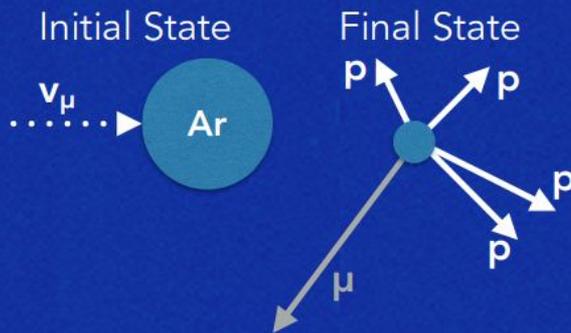

Afroditi Papadopoulou

On behalf of the  collaboration

NuINT 2022

# $\mu$ BooNE

Color scale shows deposited charge

10 cm

BNB DATA : RUN 5211 EVENT 1225. FEBRUARY 29, 2016

- Largest available neutrino-argon data set with ~500k recorded neutrino interactions

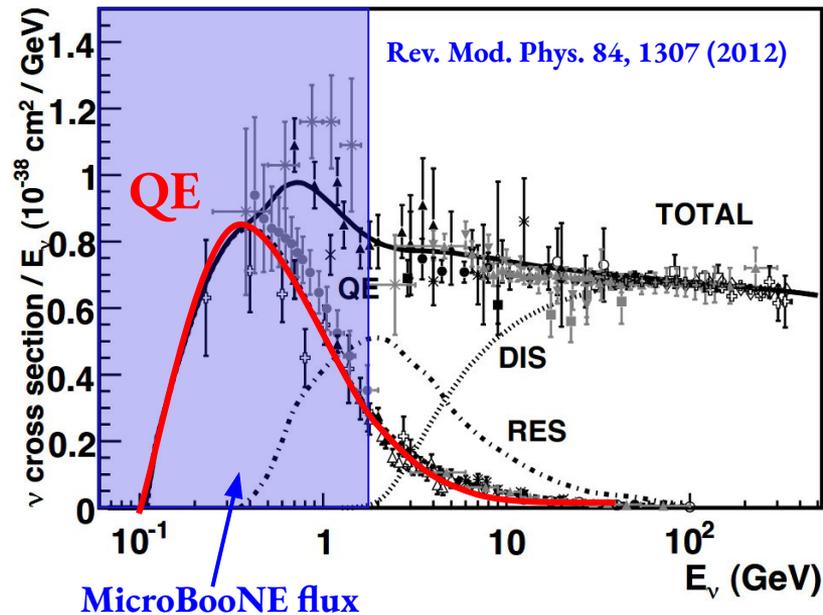

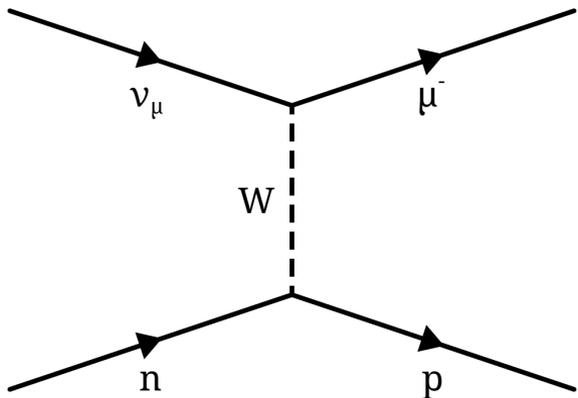

- ~40 published and active cross-section analyses

See talks by [L.Cooper-Troendle](#), [A.Szelc](#), [M.Kirby](#), [R.Fine](#), [C.Thorpe](#)

- Many focus on topologies with protons

See talk by [M.Kirby](#)  
(2 proton analysis)

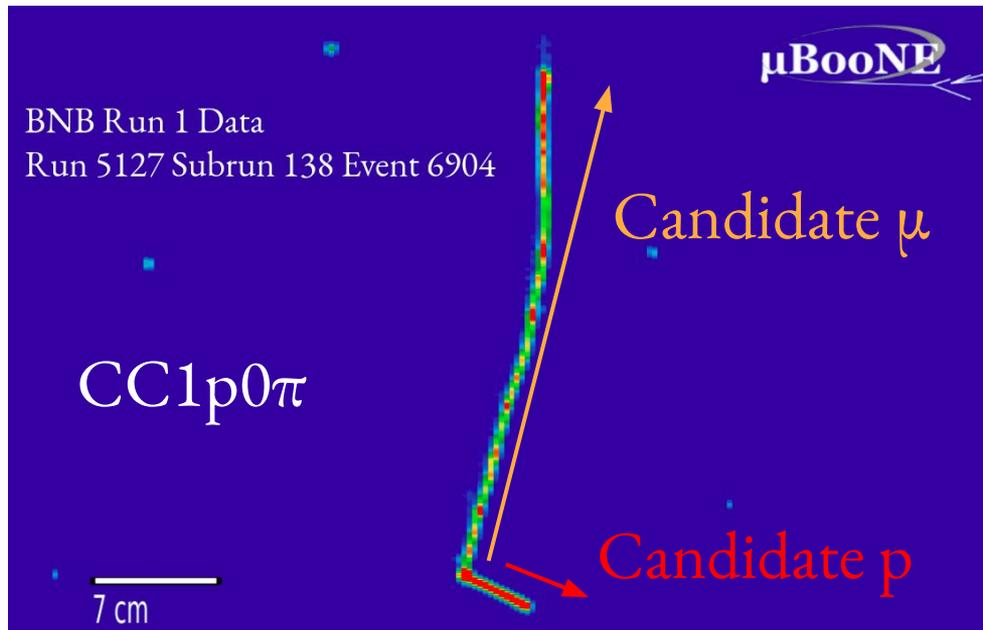

# Charged Current Quasi-elastic (CCQE) Interactions

- Simple single muon-proton events
- Dominant at MicroBooNE energies

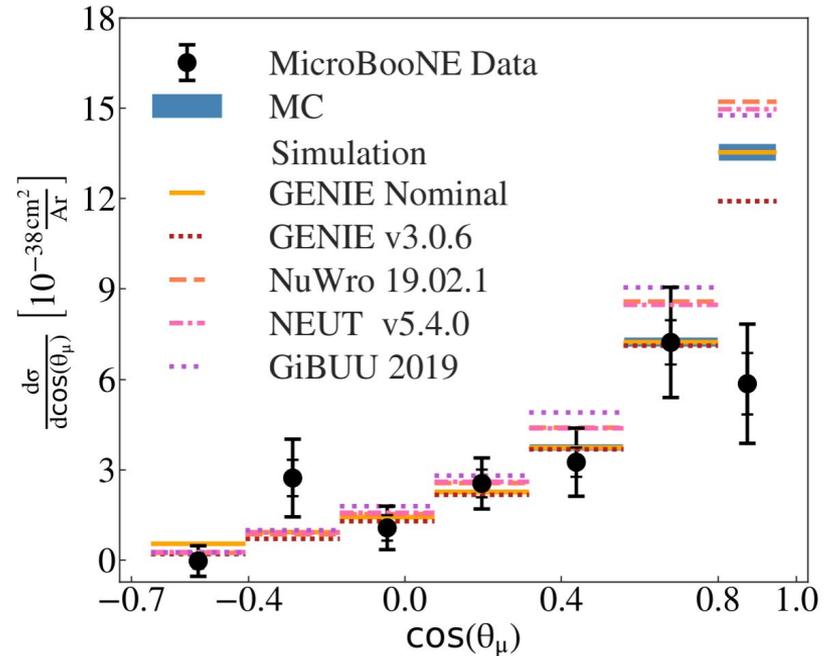

# Quasielastic-like Signal Definition

- 1 muon ( $P_{\mu} > 100 \text{ MeV}/c$ )
- 1 proton ( $P_p > \mathbf{300 \text{ MeV}/c !!!}$ )
- No  $\pi^{\pm}$  ( $P_{\pi} > 70 \text{ MeV}/c$ )
- No  $\pi^0$

# Previous Results

- First measurement of neutrino-argon CCQE-like cross sections
- Powerful cosmic background rejection and high CC1p0 $\pi$  signal purity
- Need for improved modeling!

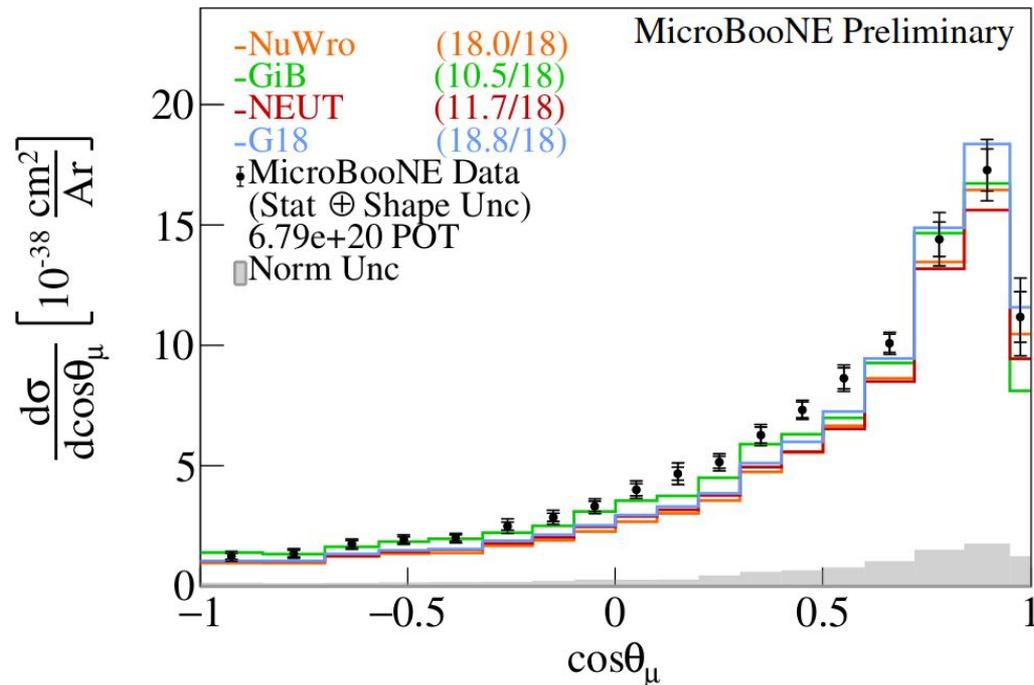

Phys. Rev. Lett. 125, 201803 (2020)

# New MicroBooNE Results\*

G18 = GENIE v3.0.6 G18\_10a\_02\_11b

Now look at kinematic variables to  
isolate specific nuclear effects!

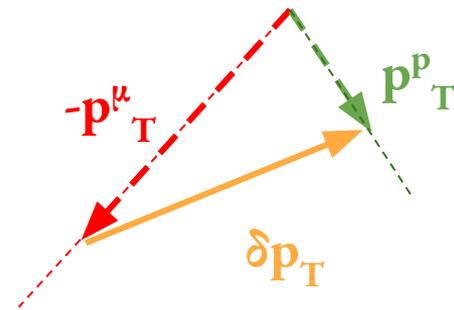

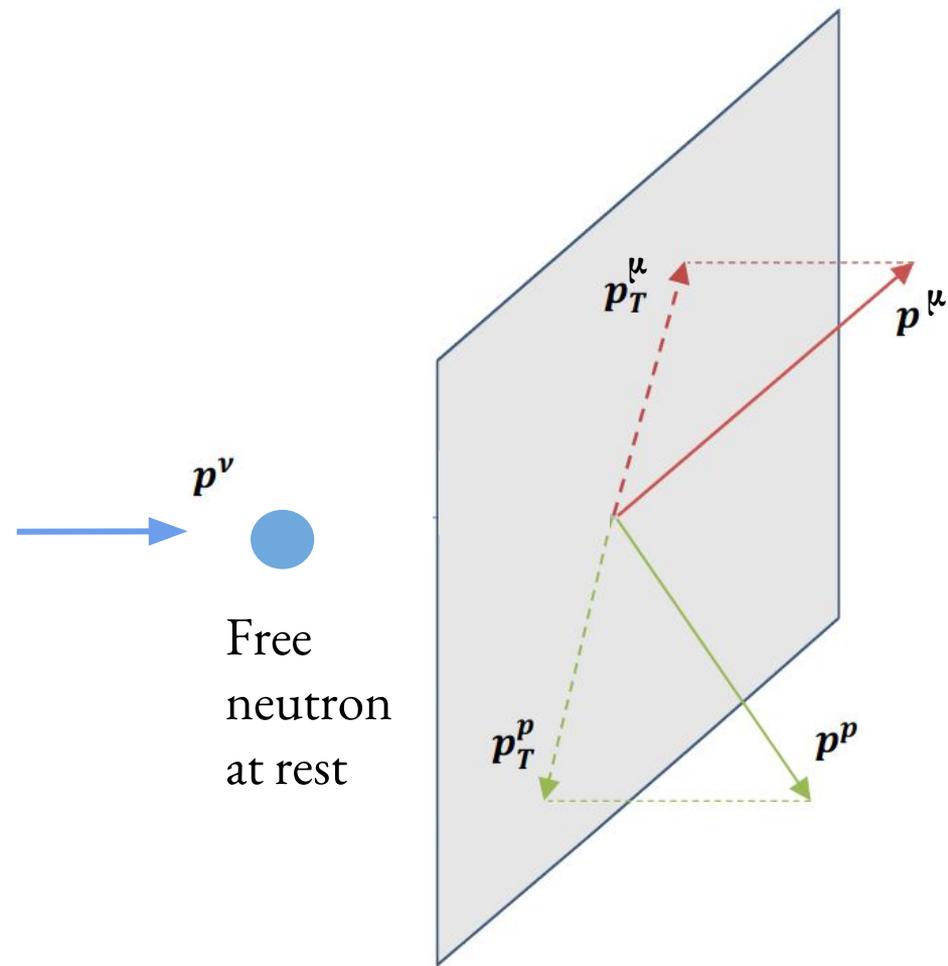

MICROBOONE-NOTE-1108-PUB (2022)

\* See backup slide 21 for analyses differences

# Transverse Kinematic Imbalance (TKI)

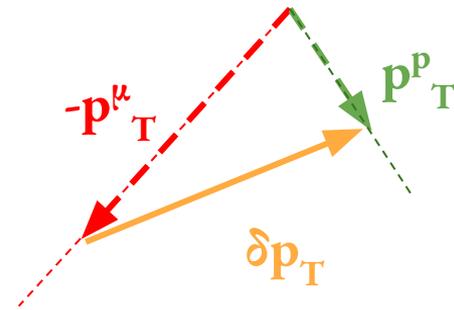

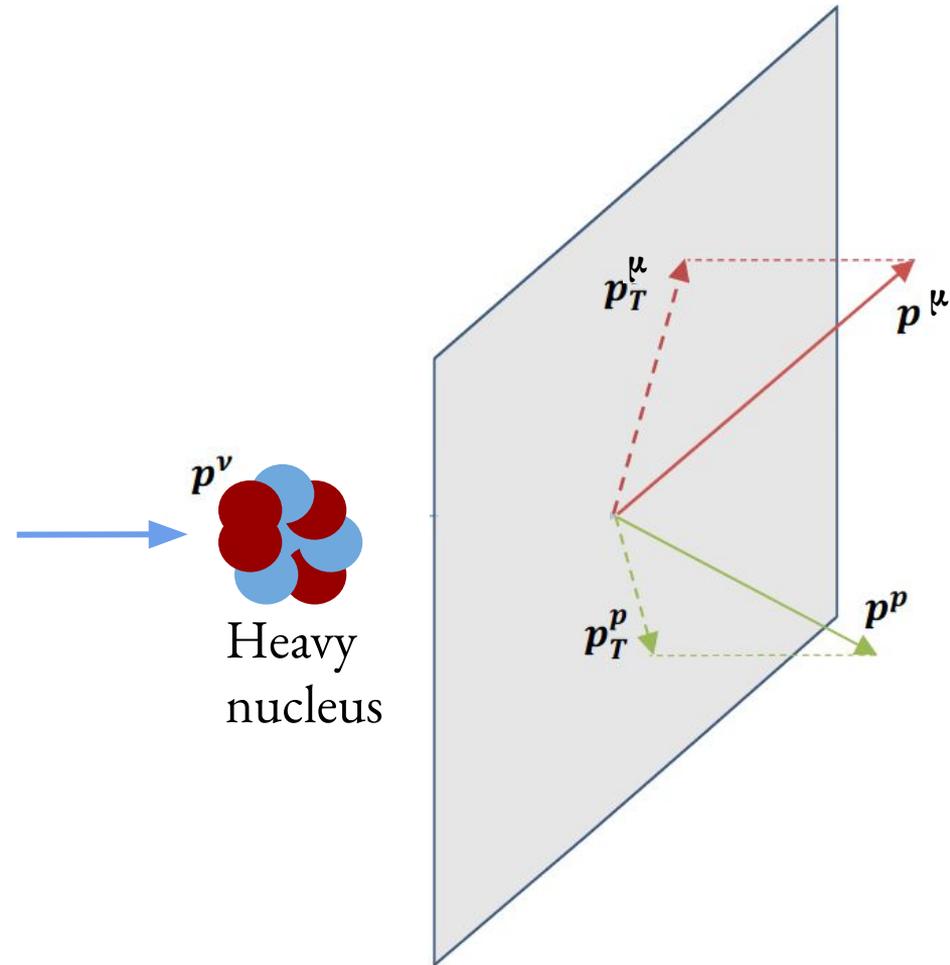

# Transverse Kinematic Imbalance (TKI)

- $\delta p_T = |p_T^\mu + p_T^p| = 0$

Transverse projections  
equal and opposite due to  
momentum conservation

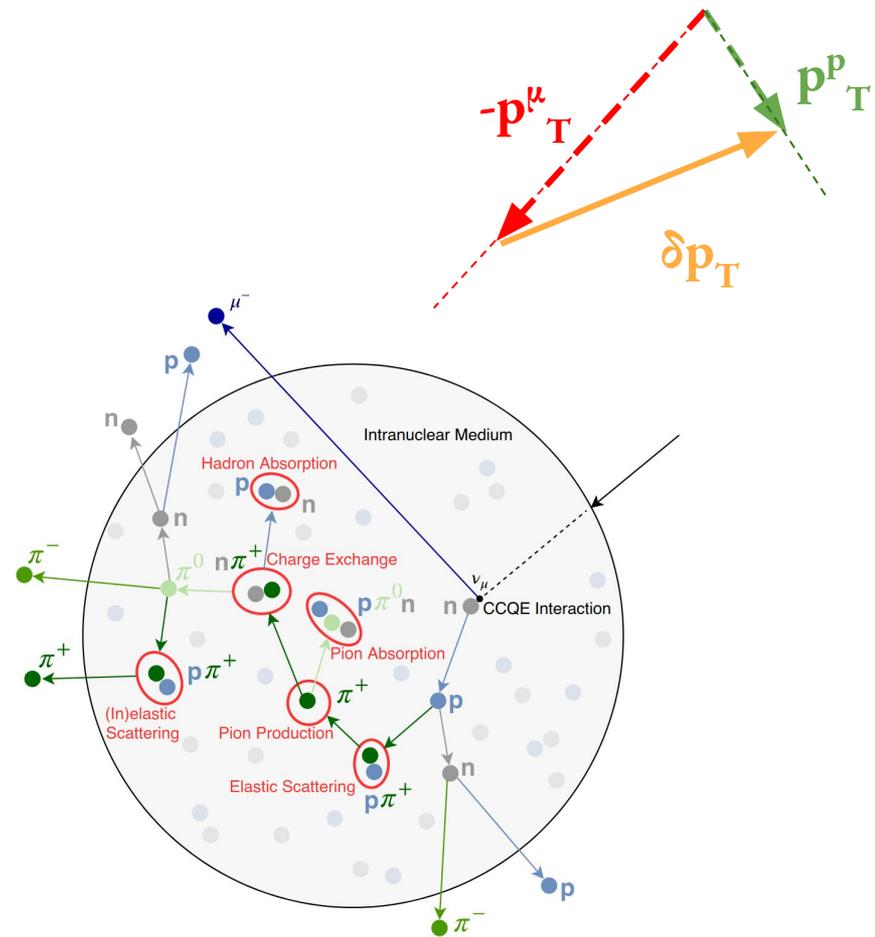

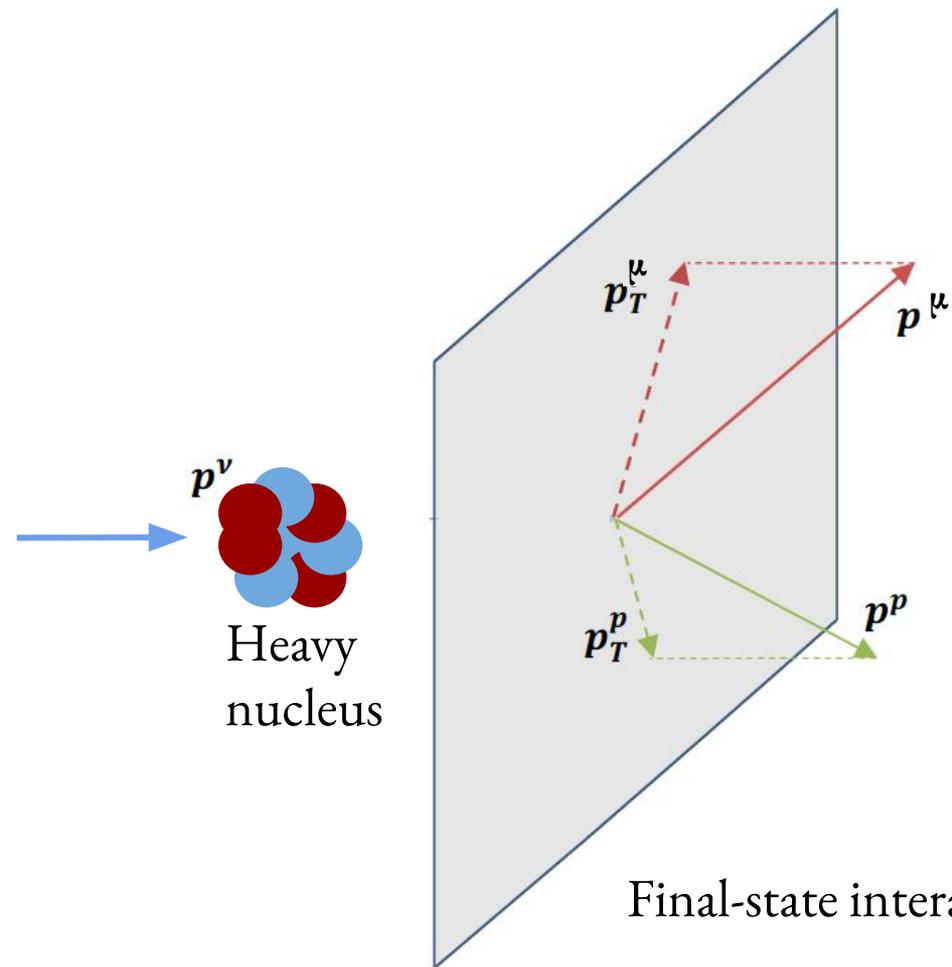

# Transverse Kinematic Imbalance (TKI)

- $\delta p_T = | \mathbf{p}_T^\mu + \mathbf{p}_T^p | > 0$

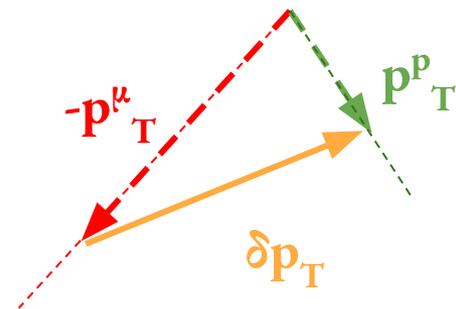

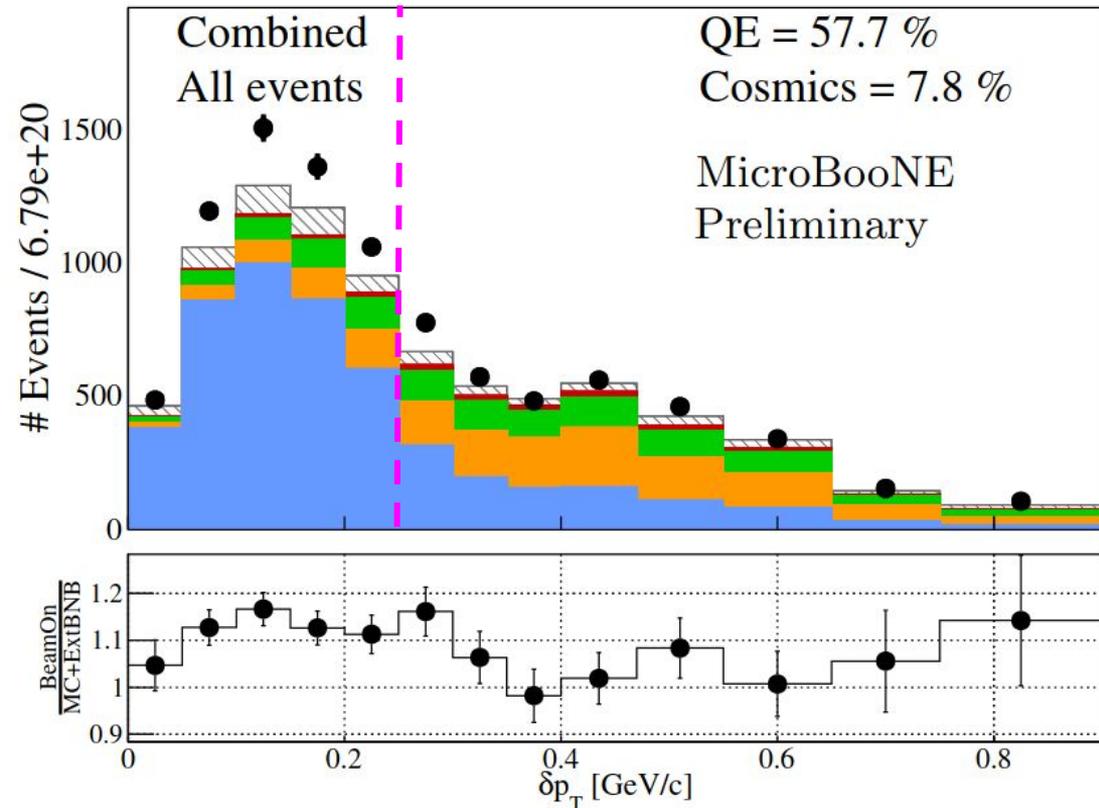

Transverse missing momentum  
due to initial nucleon motion  
and other nuclear effects

# Transverse Kinematic Imbalance (TKI)

arXiv:2201.04664

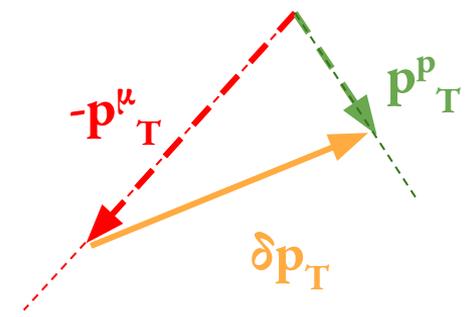

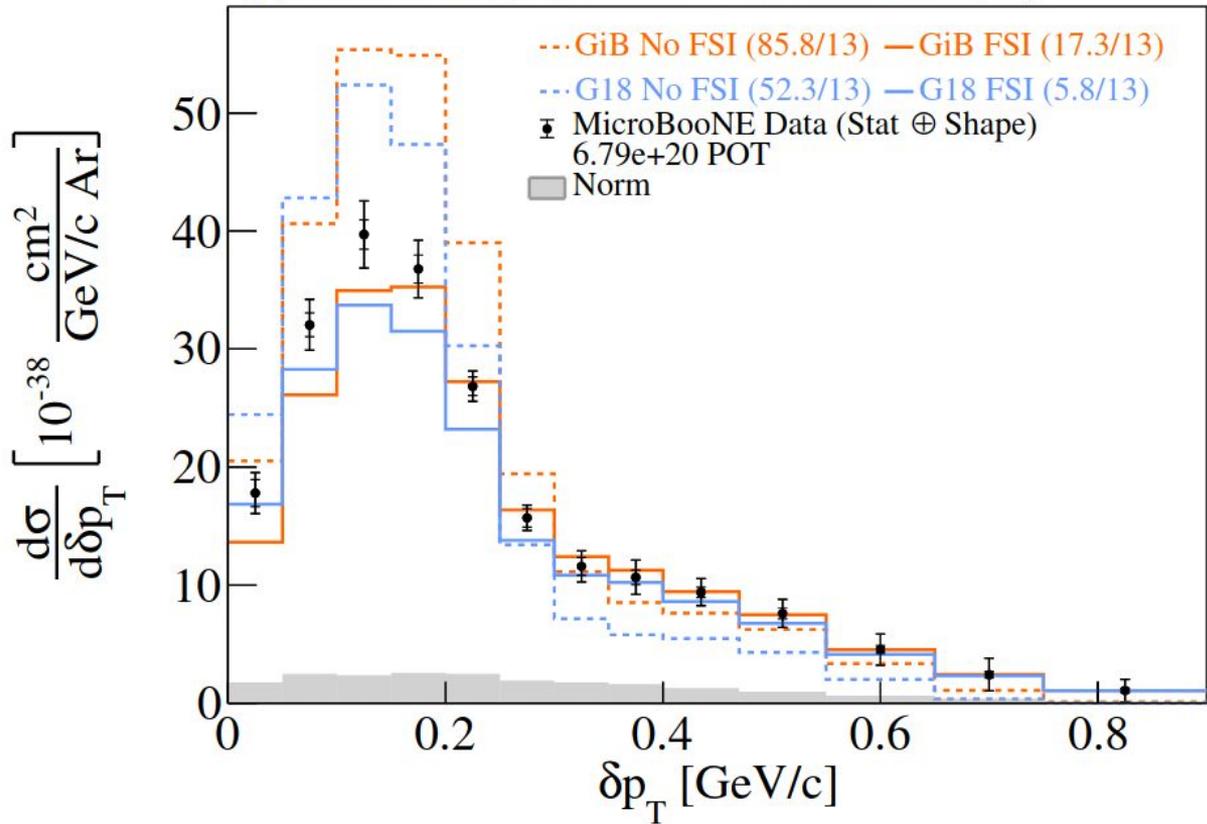

# Transverse Missing Momentum $\delta p_T$

- **QE** dominance in peak below Fermi momentum ( $\sim 250$  MeV/c)
- **MEC/RES** mainly in high momentum tail

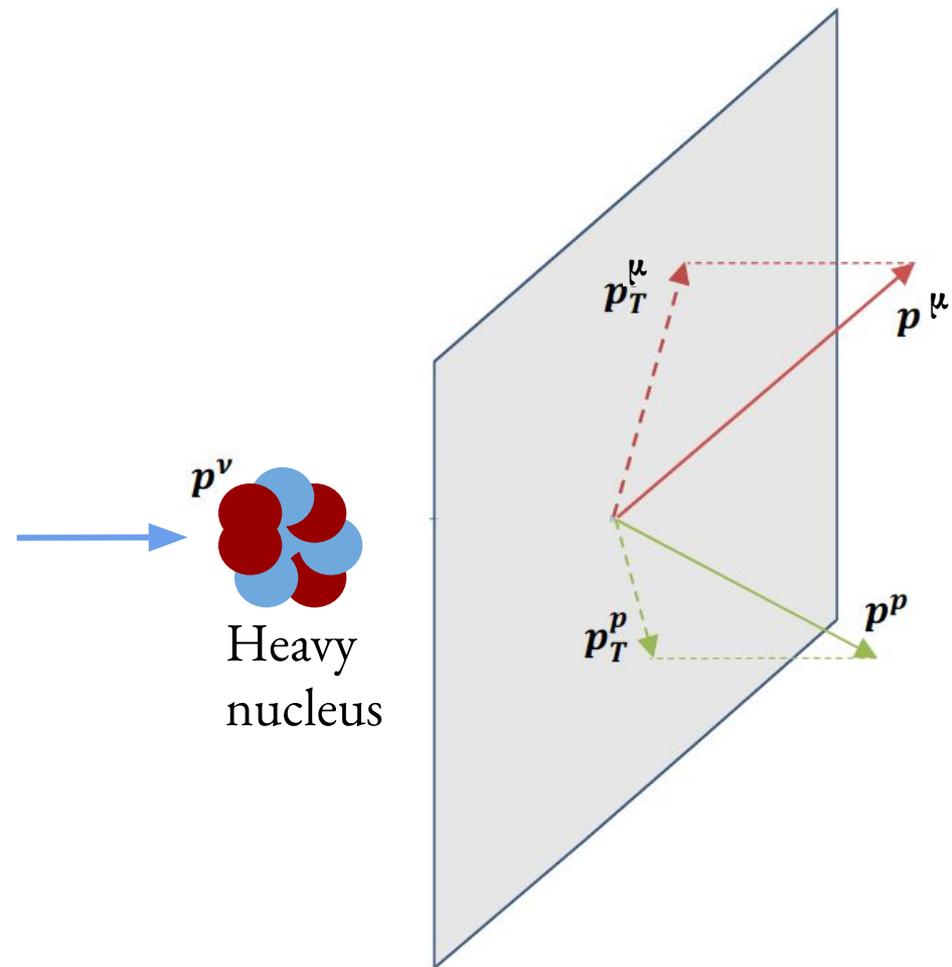

# Transverse Missing Momentum $\delta p_T$ Cross Section

All events, MicroBooNE Preliminary

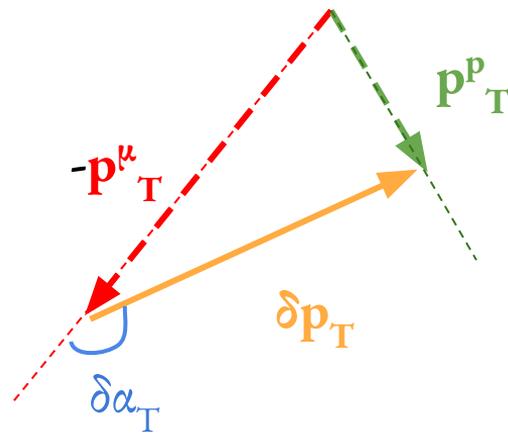

- First neutrino-argon differential cross section in  $\delta p_T$
- Sensitive to initial nucleon motion & proton FSI modeling
- Data favors FSI addition

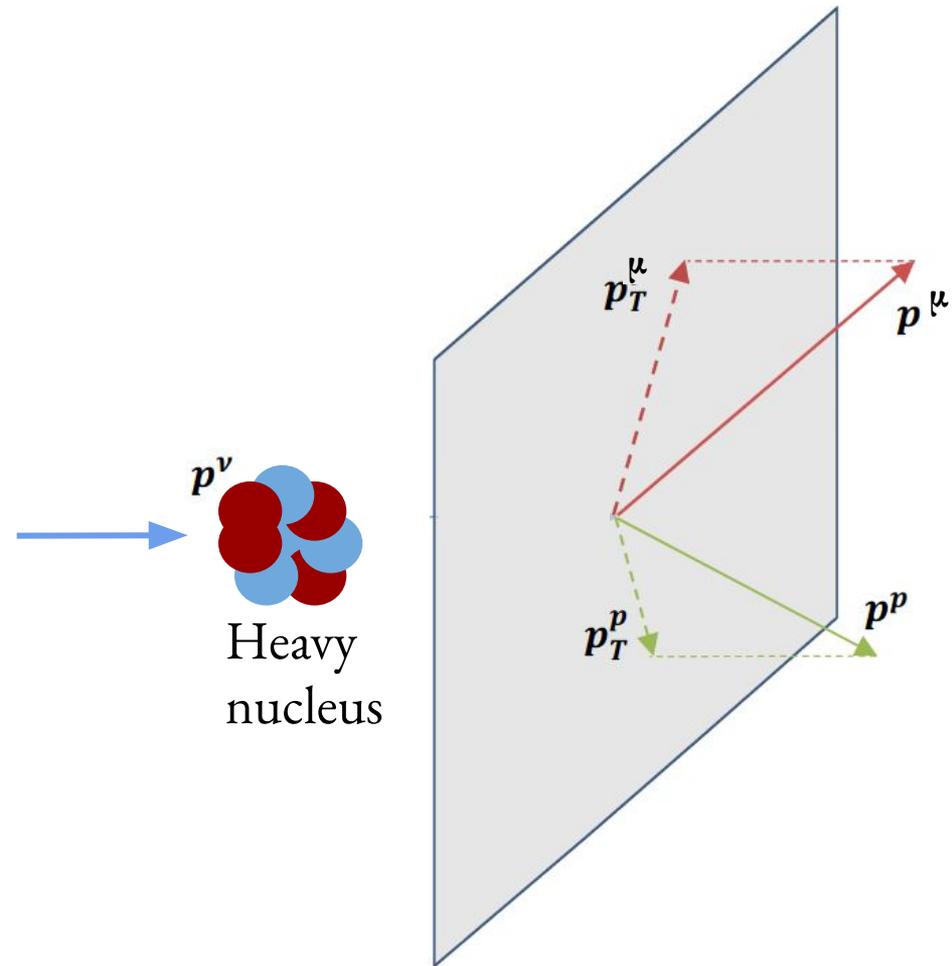

# Transverse Kinematic Imbalance (TKI)

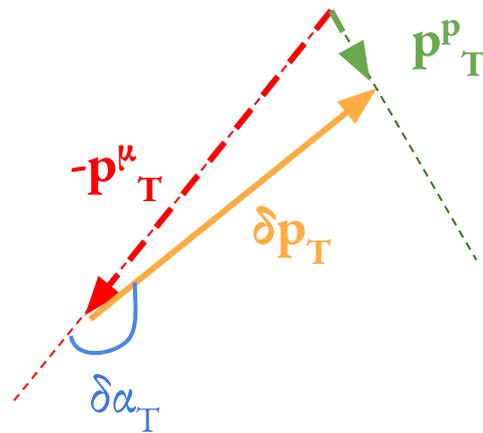

Orientation of the imbalance ( $\delta\alpha_T$ )  
also meaningful

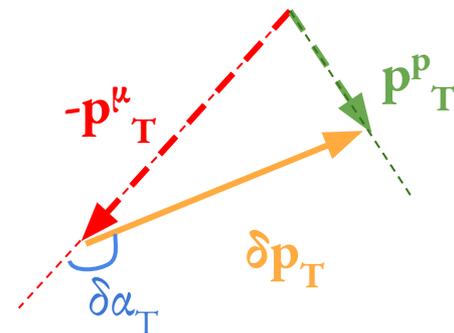

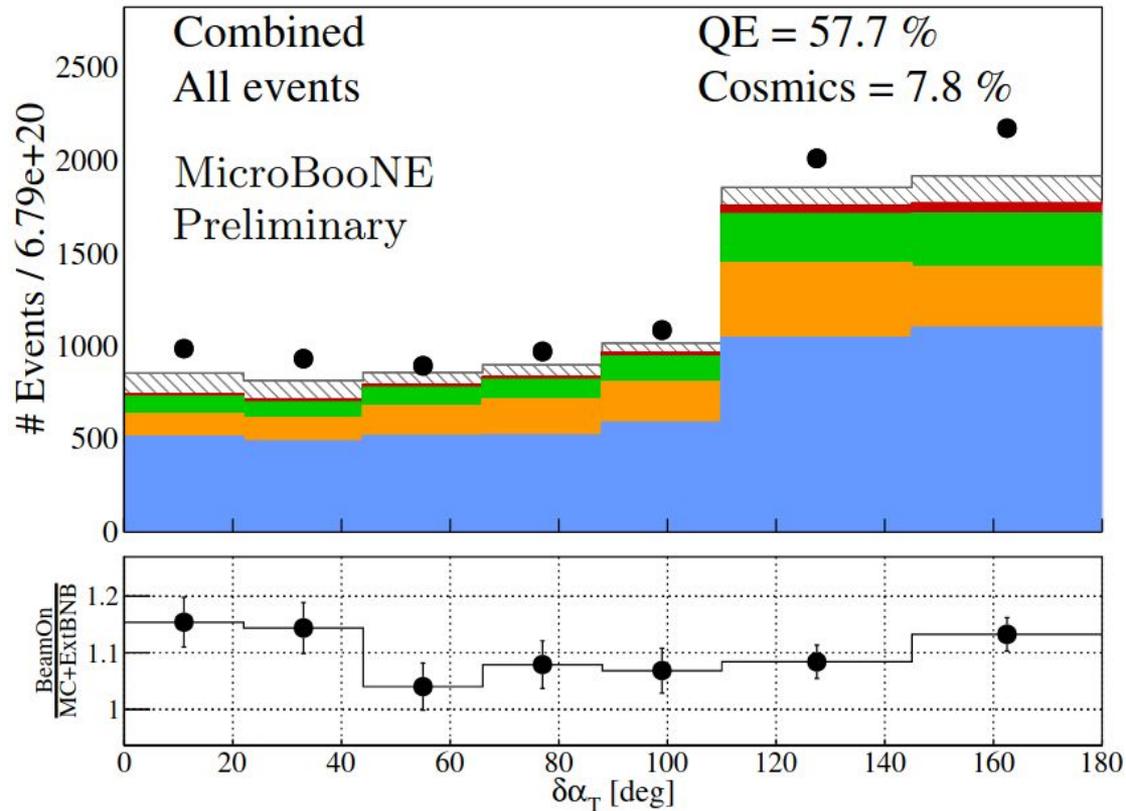

# Transverse Kinematic Imbalance (TKI)

High  $\delta\alpha_T$  values correspond to proton deceleration due to FSI

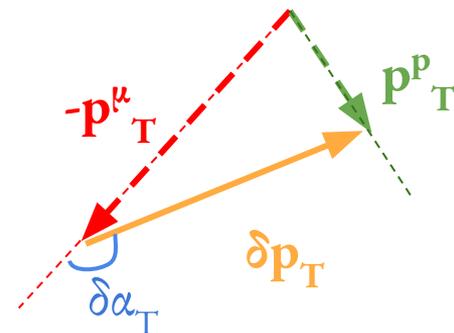

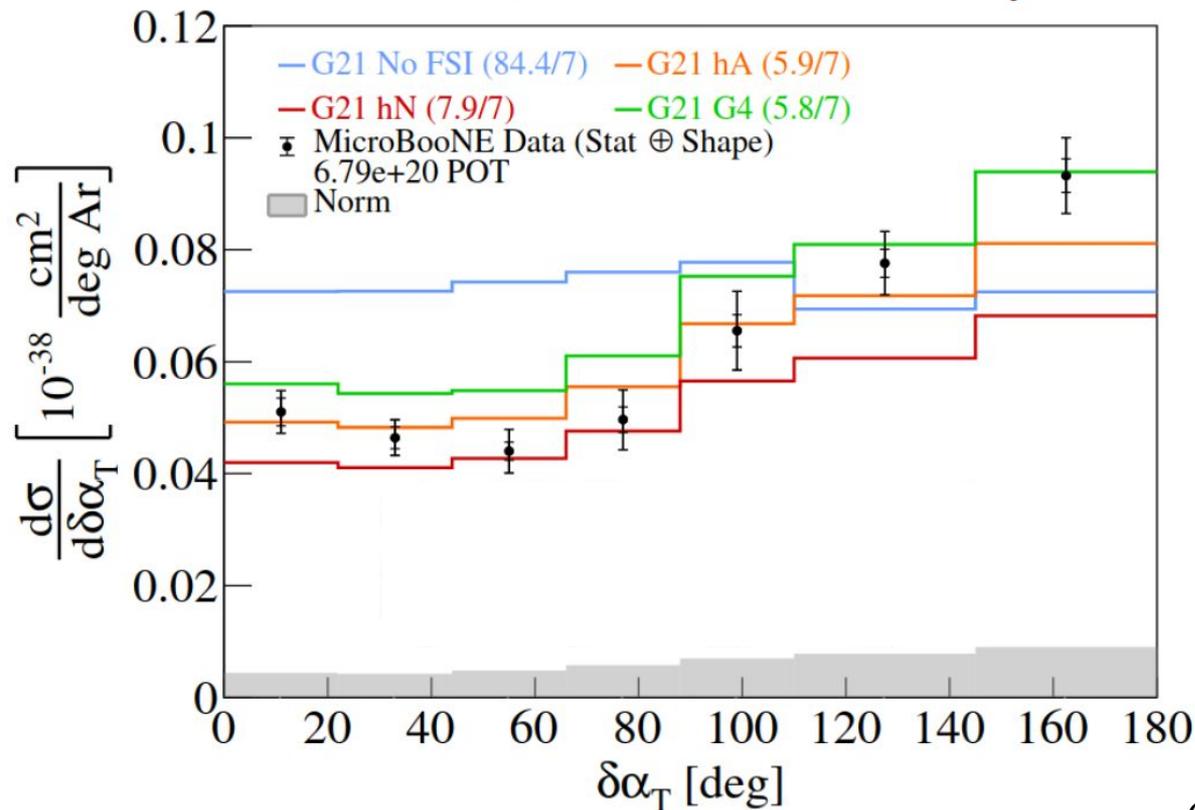

# Transverse Orientation $\delta\alpha_T$

- $\delta\alpha_T$  asymmetry due to proton FSI
- **MEC/RES** fractional contribution enhanced in  $\sim 180^\circ$  region

# Transverse Orientation $\delta\alpha_T$ Cross Section

All events, MicroBooNE Preliminary

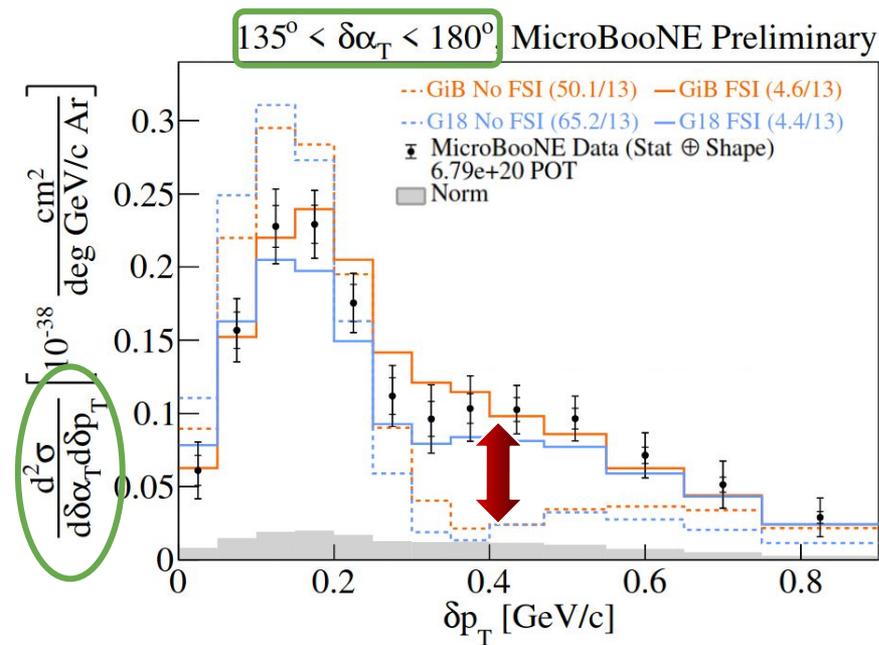

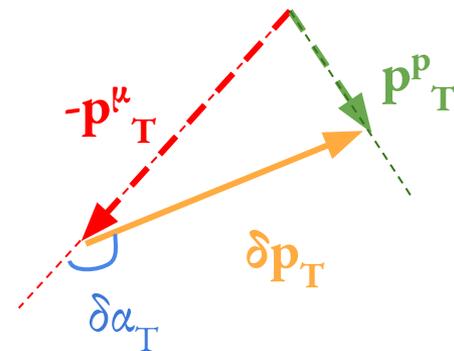

- First neutrino-argon differential cross section in  $\delta\alpha_T$
- Sensitive to proton FSI modeling
- Data favors FSI addition
- Shape differences observed

G21 = GENIE v3.0.6 G21\_11b\_00\_000

hA/hN/G4 = FSI modeling options

# High Statistics → Into the Multiverse!

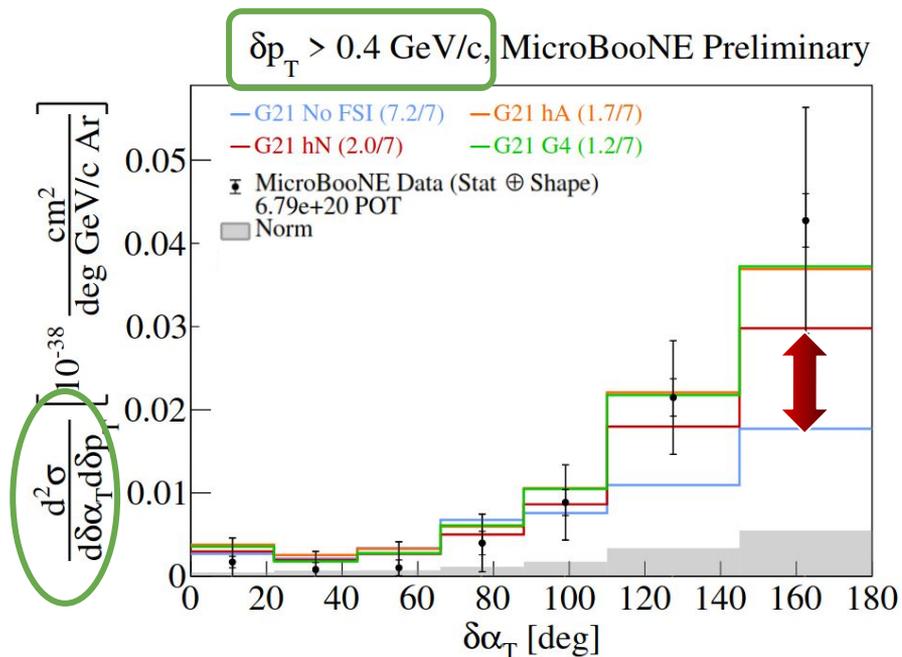

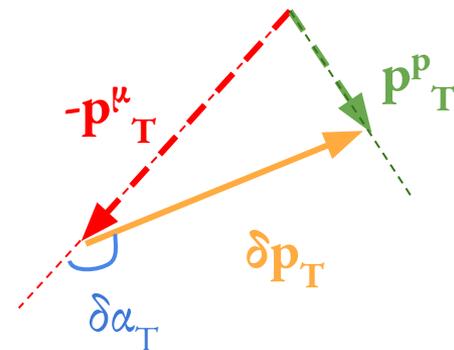

- **Extension to 2D** for the first time on any neutrino target
- Probe regions with greater model discrimination power

- FSI predictions in good agreement with data
- Minimal no-FSI contributions at high  $\delta p_T$
- High  $\delta\alpha_T$  & high  $\delta p_T$  part of phase-space ideal to test FSI / multinucleon effect sensitivity

# High Statistics → Into the Multiverse!

- **Extension to 2D** for the first time on any neutrino target
- Probe regions with greater model discrimination power

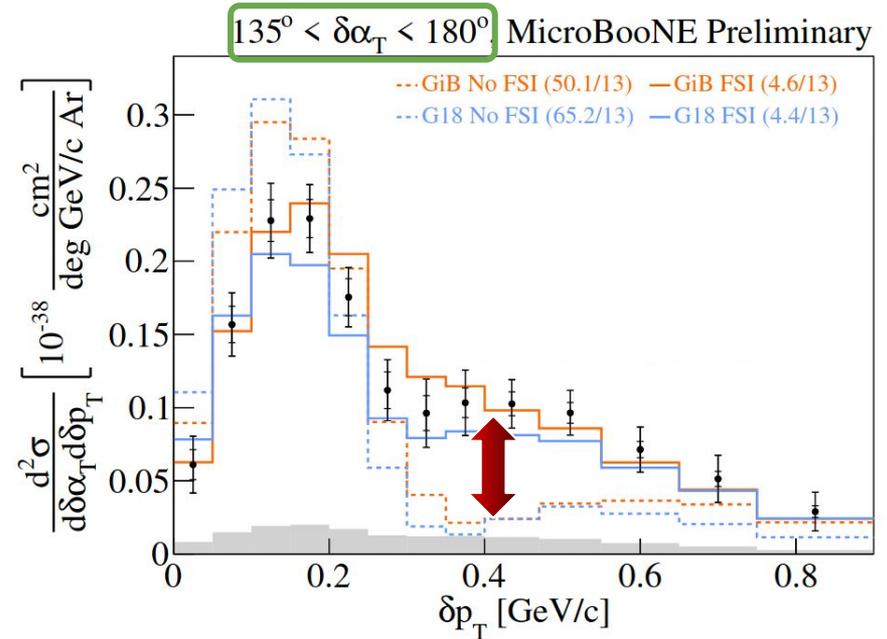

- No-FSI contribution lower than FSI ones
- High  $\delta \alpha_T$  & high  $\delta p_T$  part of phase-space ideal to test FSI / multinucleon effect sensitivity

G21 = GENIE v3.0.6 G21\_11b\_00\_000  
hA/hN/G4 = FSI modeling options

# Summary

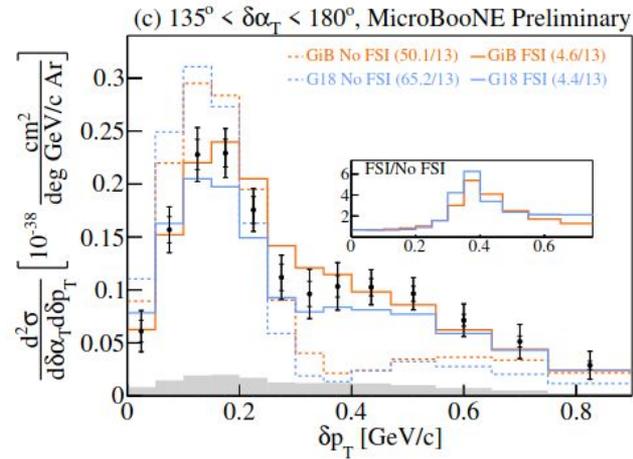

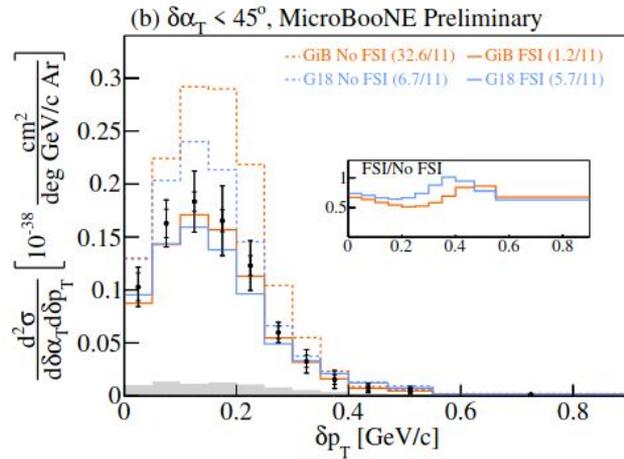

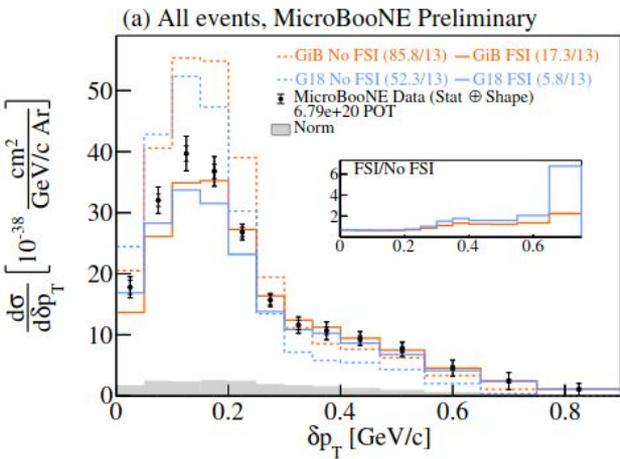

- First single-differential neutrino-argon cross section measurements in TKI
- First double-differential cross section measurement on any target in TKI
- Identified kinematic variables and phase-space regions with sensitivity to specific nuclear effects

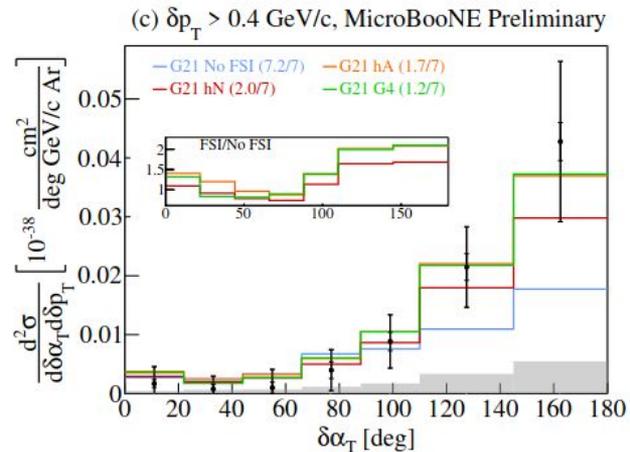

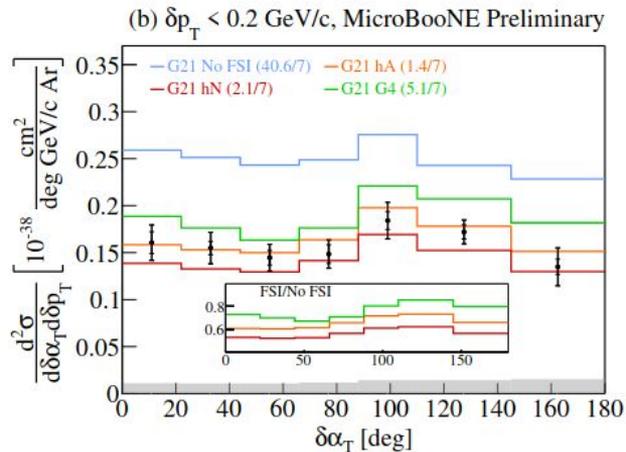

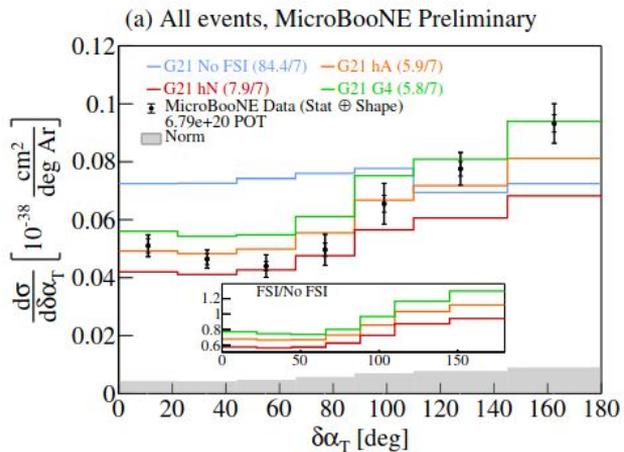

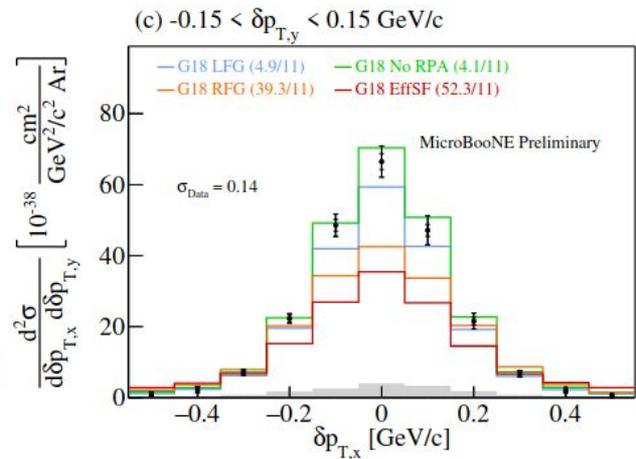

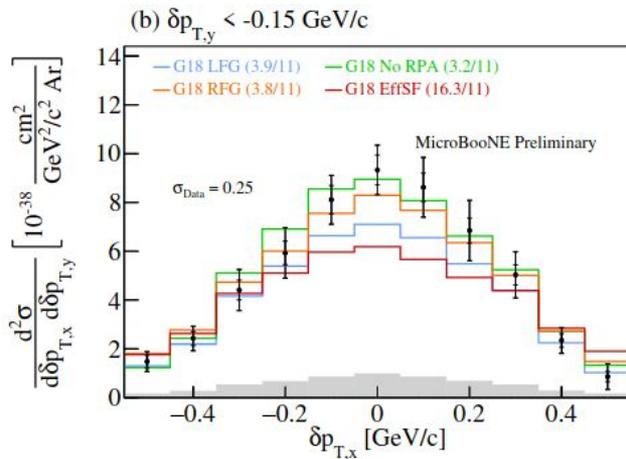

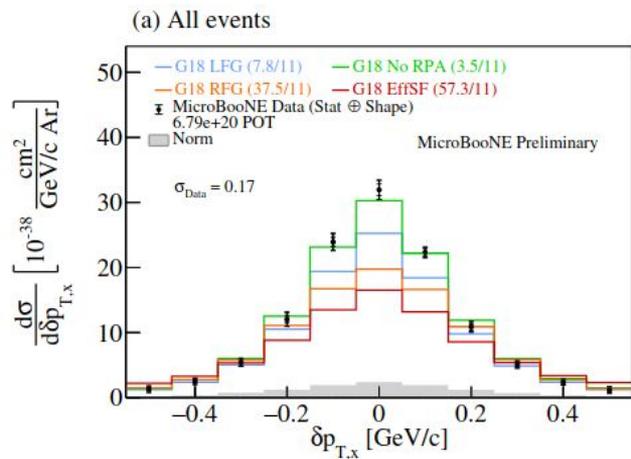

Thank you!

# CCQE-like vs TKI

---

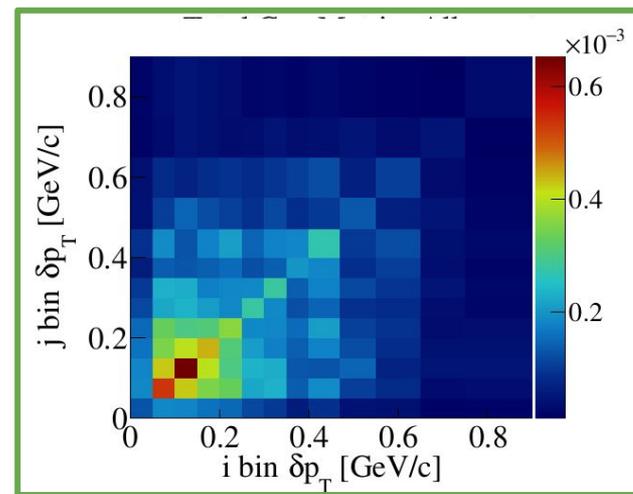

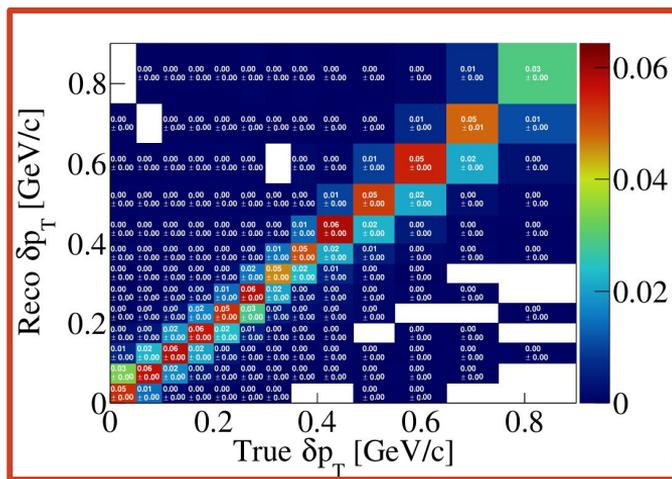

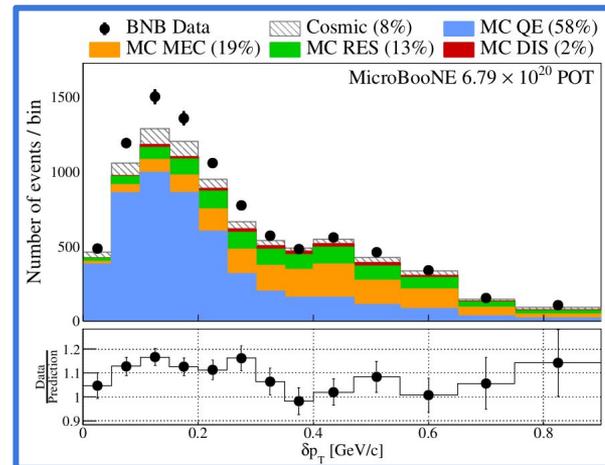

- 1 muon  $100 < P_{\mu} < \mathbf{1500}$  MeV/c
- 1 proton  $300 < P_p < 1000$  MeV/c
- No  $\pi^{\pm}$  ( $> 70$  MeV/c)
- No  $\pi^0$  of any momenta
  
- $-\mathbf{0.65} < \cos \theta_{\mu} < \mathbf{0.95}$
- $\cos \theta_p > \mathbf{0.15}$
  
- $|\Delta\theta_{\mu,p} - 90^{\circ}| < \mathbf{55^{\circ}}$
- $|\Delta\varphi_{\mu,p} - 180^{\circ}| < \mathbf{35^{\circ}}$
- $\mathbf{p_T} = |\mathbf{p_T}^{\mu} + \mathbf{p_T}^p| < \mathbf{350}$  MeV/c

- 1 muon  $100 < P_{\mu} < \mathbf{1200}$  MeV/c
- 1 proton  $300 < P_p < 1000$  MeV/c
- No  $\pi^{\pm}$  ( $> 70$  MeV/c)
- No  $\pi^0$  of any momenta
  
- $-\mathbf{1} < \cos \theta_{\mu} < \mathbf{1}$
- $-\mathbf{1} < \cos \theta_p < \mathbf{1}$

# Cross Section Extraction with Wiener SVD Unfolding

## Input Quantities

- Measurement (Data)
- Background (MC)
- Response Matrix (MC)
- Total Covariance Matrix (MC)

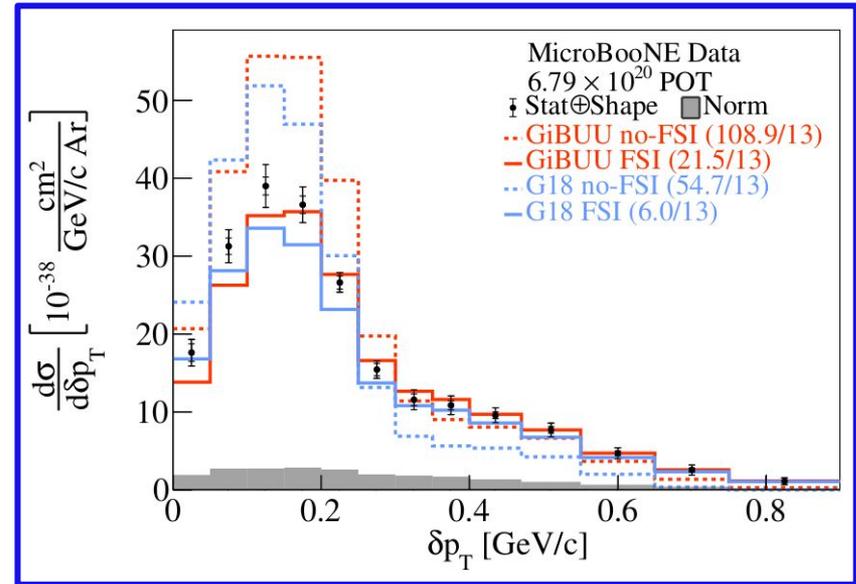

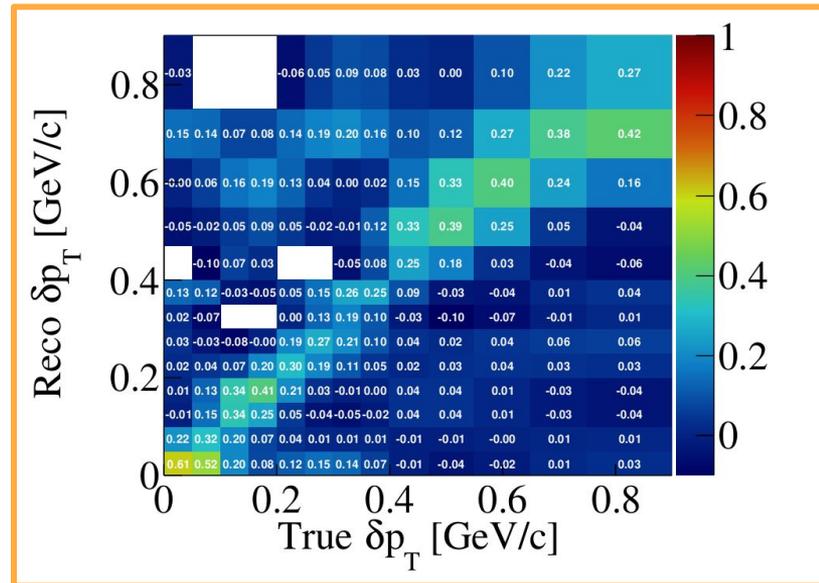

# Cross Section Extraction with Wiener SVD Unfolding

Output Quantities in Regularized Space

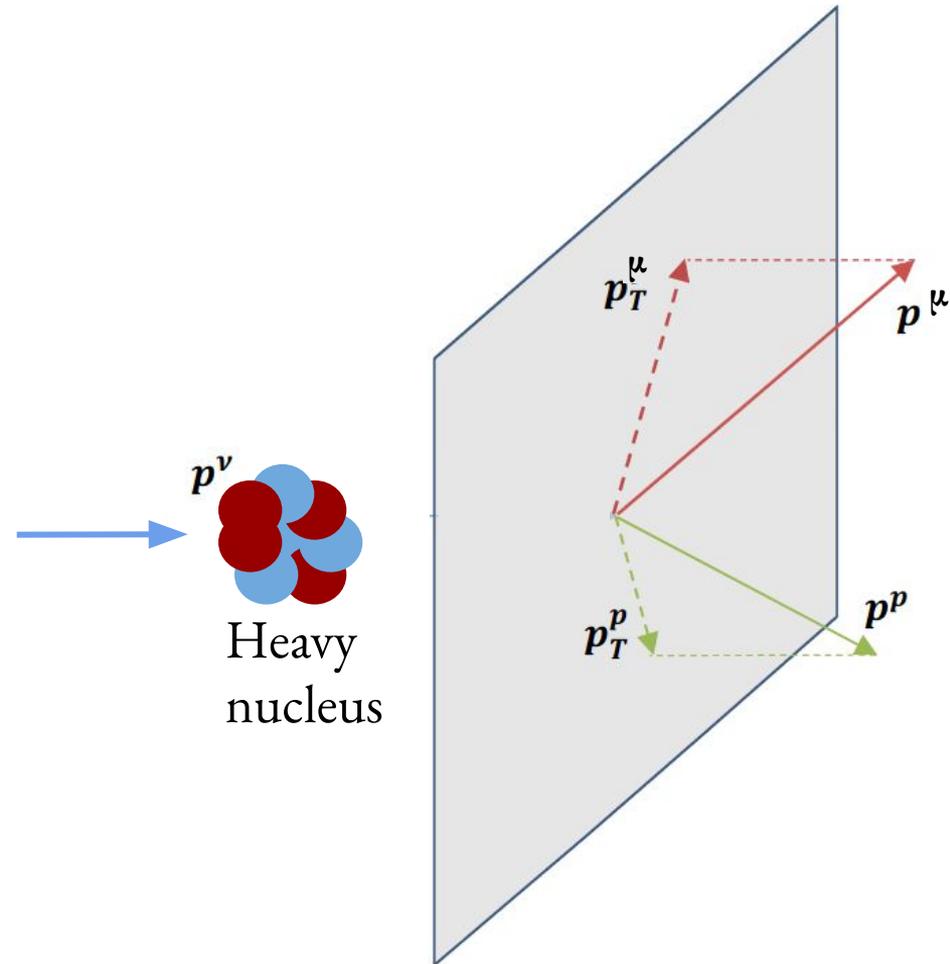

- Unfolded Data spectrum

- Smearing Matrix  $A_C$

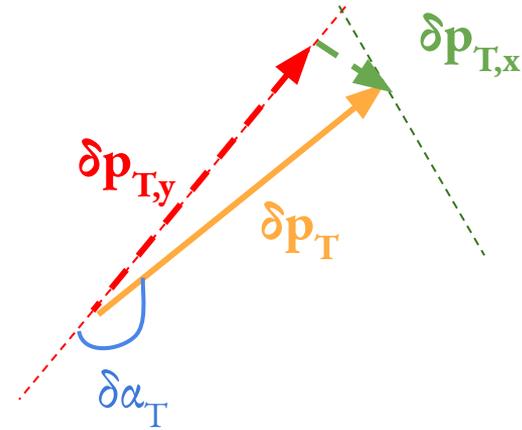

\*Applied on theory predictions and included in data release

# Transverse Kinematic Imbalance (TKI)

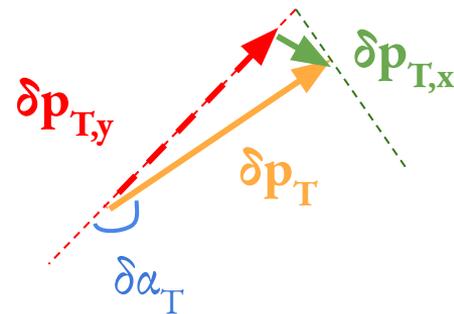

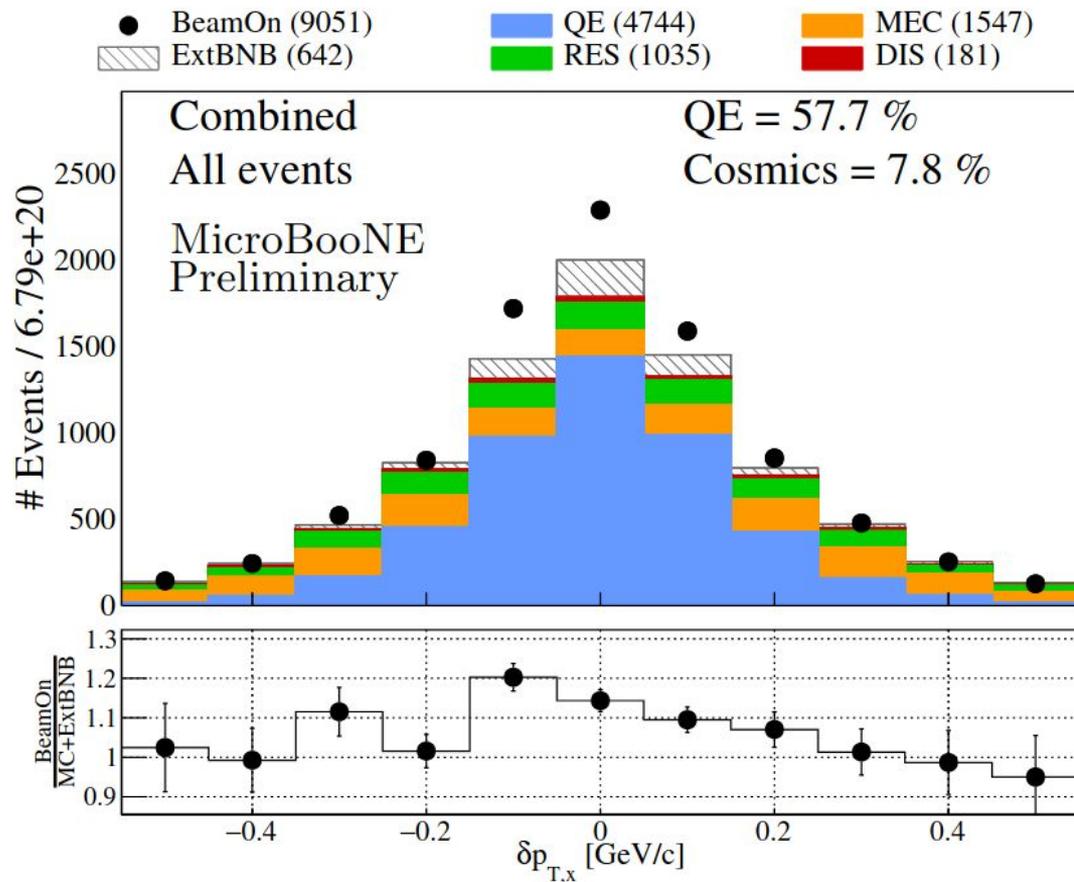

- Further handles over nuclear effects via transverse and longitudinal components

- $\delta$ -function if scattering on free nucleon
- Broad distribution due to scattering off heavy argon nucleon

# Transverse Component $\delta p_{T,x}$

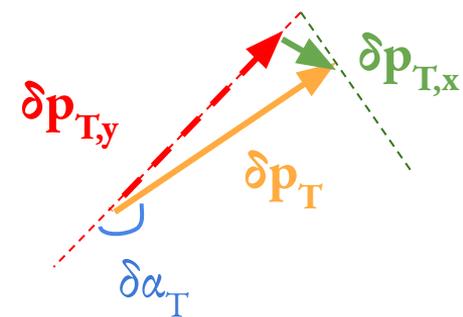

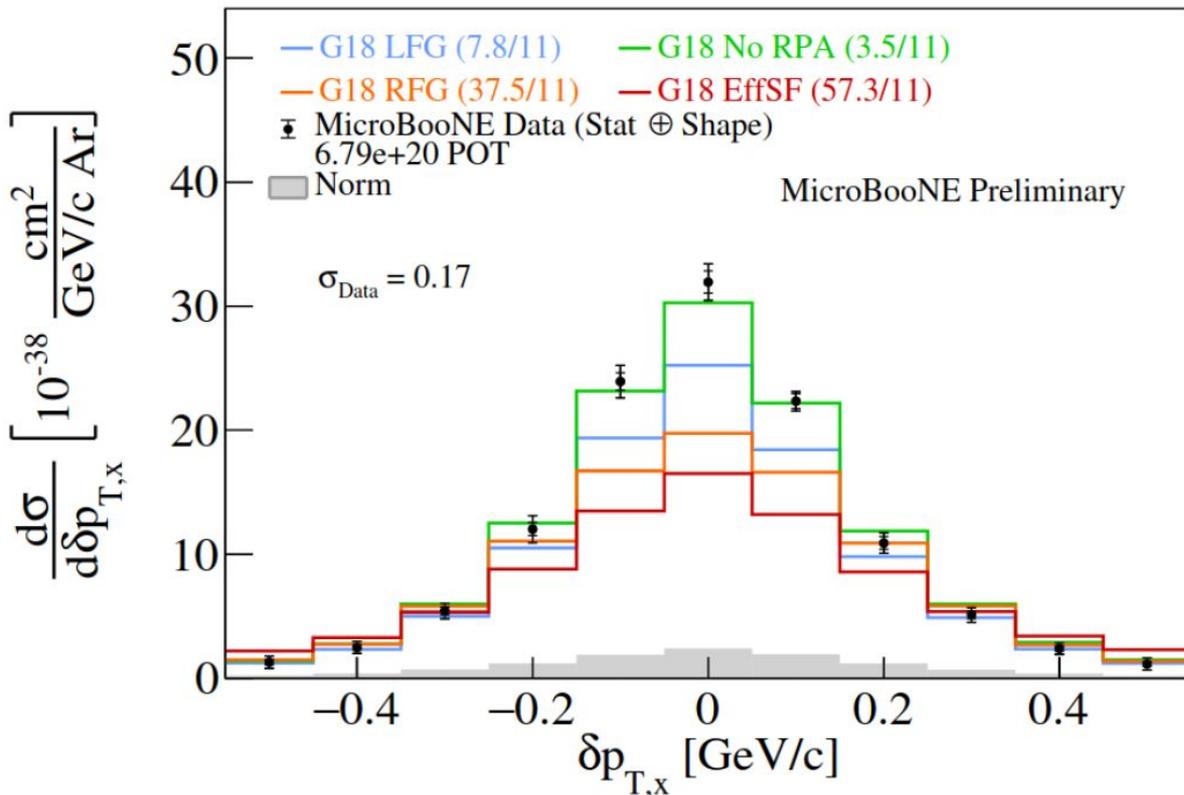

$$\delta p_{T,x} = \delta p_T \cdot \sin \delta \alpha_T$$

- Symmetric around 0 GeV/c
- **QE** dominance in central region
- **MEC/RES** events primarily in the tail

# Transverse Component $\delta p_{T,x}$ Cross Section

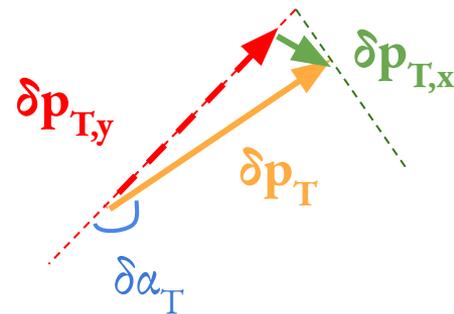

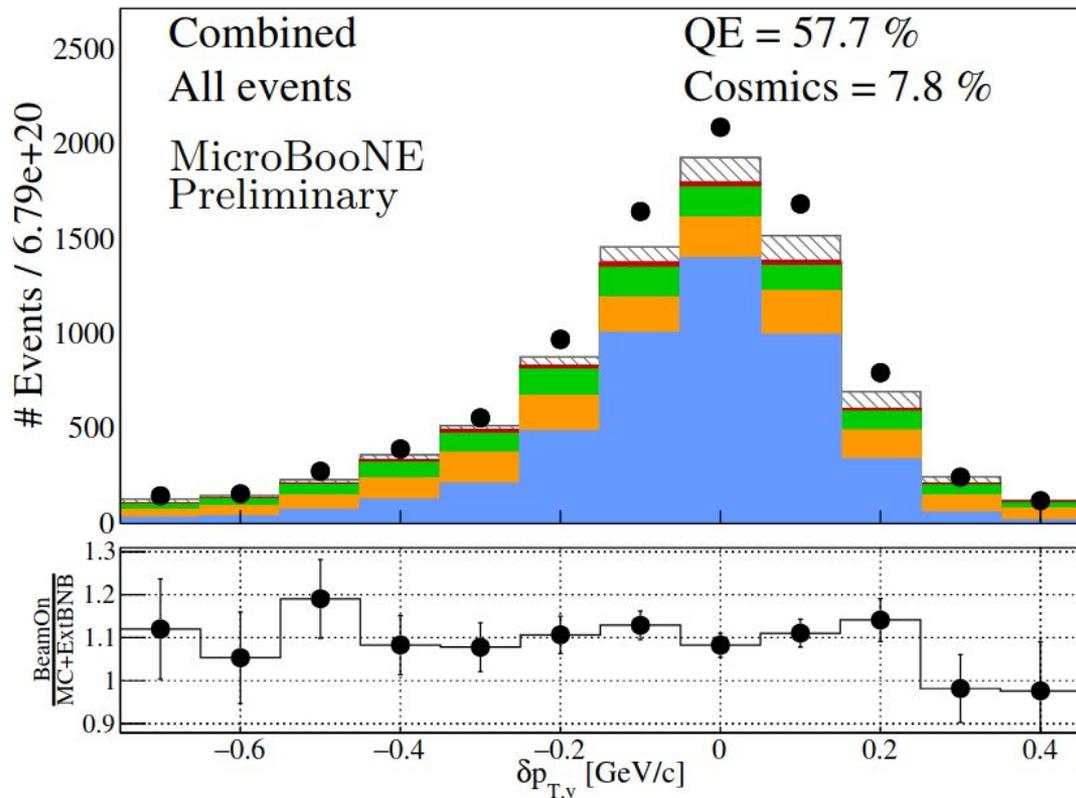

All events

$$\delta p_{T,x} = \delta p_T \cdot \sin \delta \alpha_T$$

- **G18 LFG** = GENIE v3.0.6  
G18\_10a\_02\_11a (G18) + uB Tune
