

Status of THz generation and electro-optical detection at DELTA

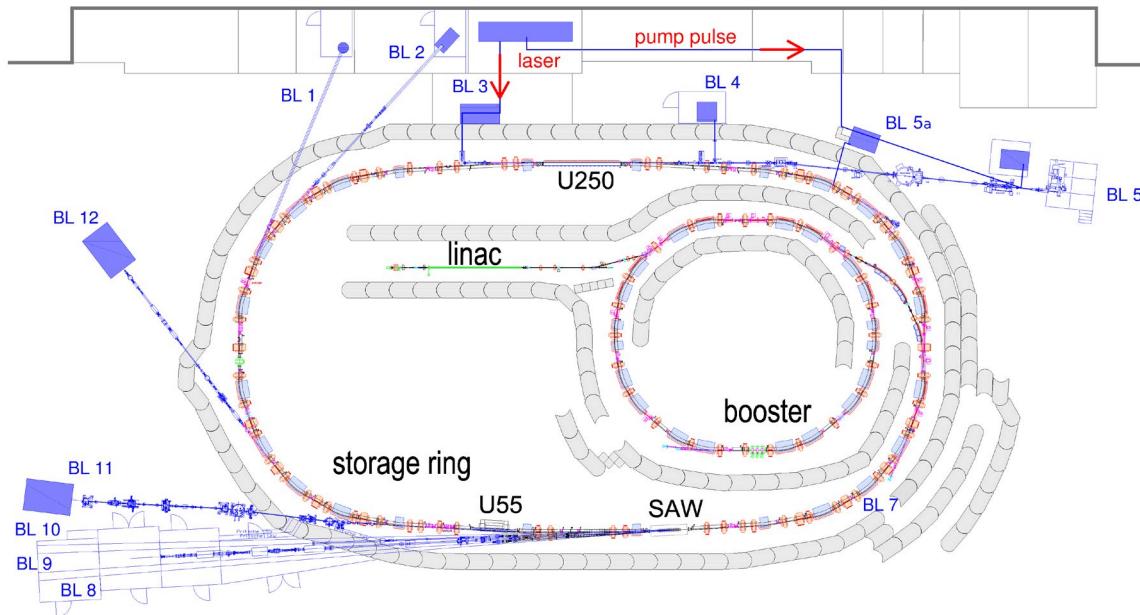

11th Workshop on Longitudinal Electron Bunch Diagnostics, Université de Lille

29.06.2022

VIVEK VIJAYAN

vivek.vijayan@tu-dortmund.de

DELTA Storage Ring

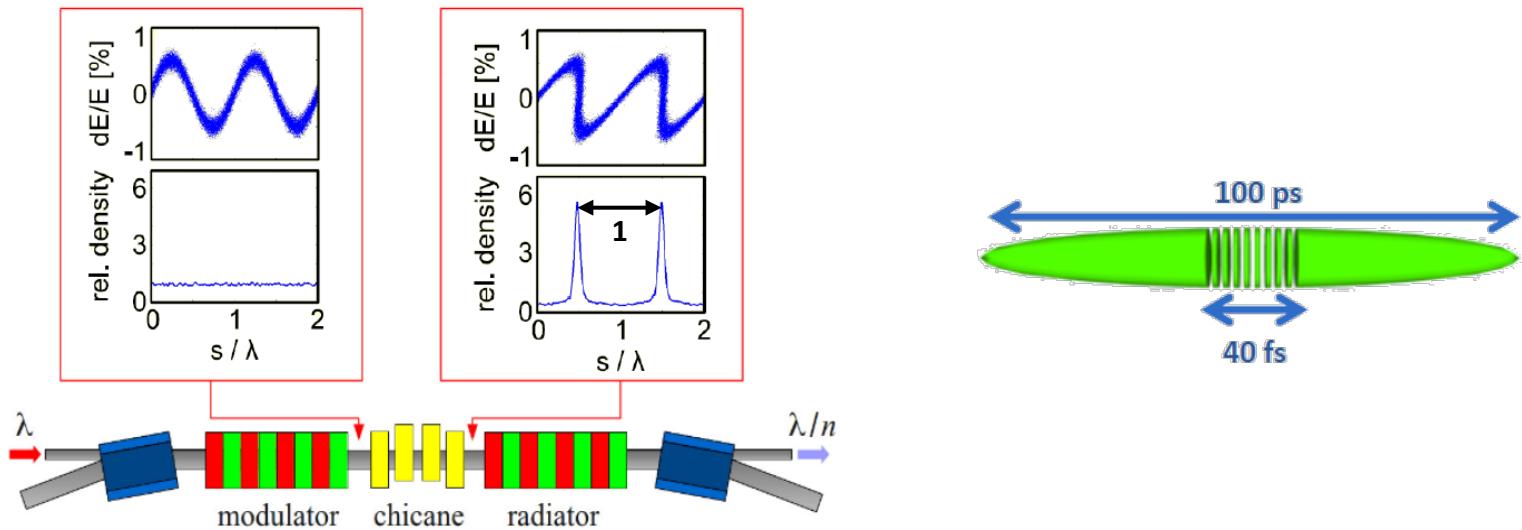

DELTA

Electron energy	1.5 GeV
Circumference	115.2 m
Hor. emittance	16 nm rad
Energy spread $\Delta E/E_0$	7e-4
Beam current	130 mA (mb) 15 mA (sb)
Bunch length	80 ps
Revolution frequency	2.6 MHz

Ti-Sapphire Laser

Wavelength	800 nm
Pulse length (FWHM)	40 fs
Pulse energy	8 mJ
Repetition rate	1 kHz

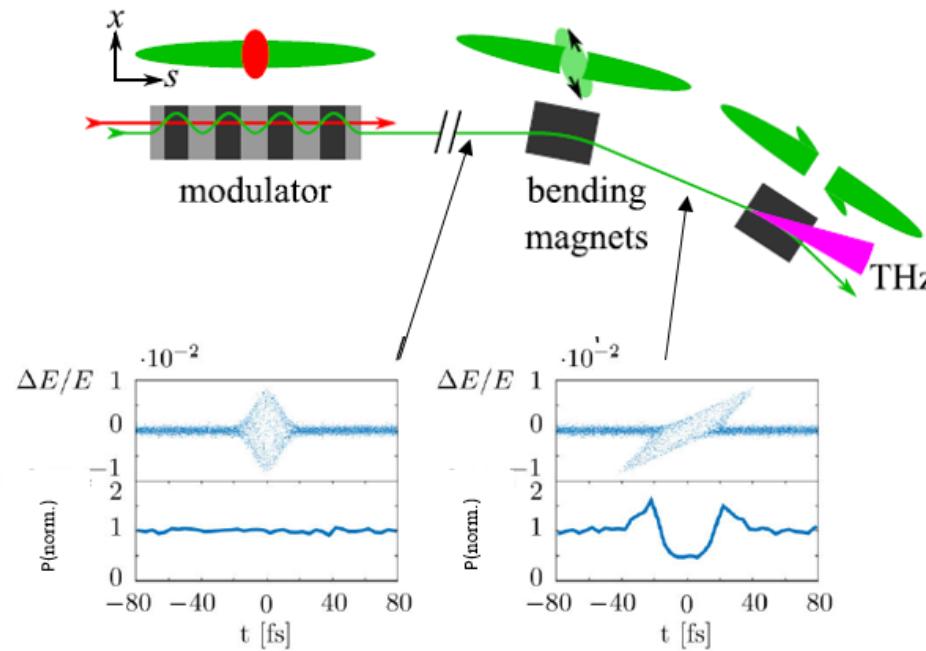

The Short-Pulse Facility at DELTA

Production of ultrashort VUV pulses employing coherent harmonic generation (CHG) scheme

Masters thesis, Robert Molo (2011)

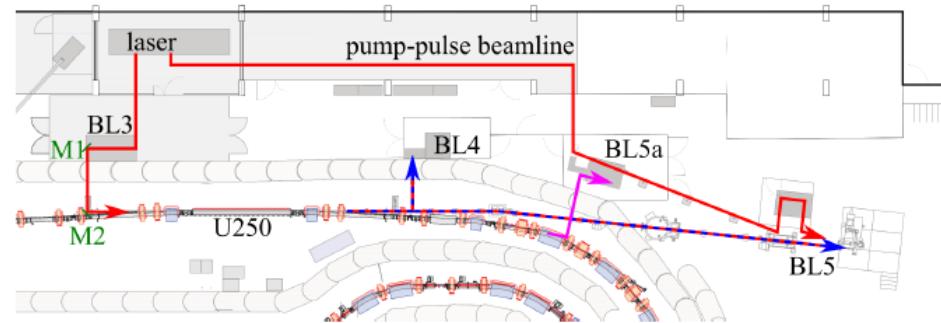

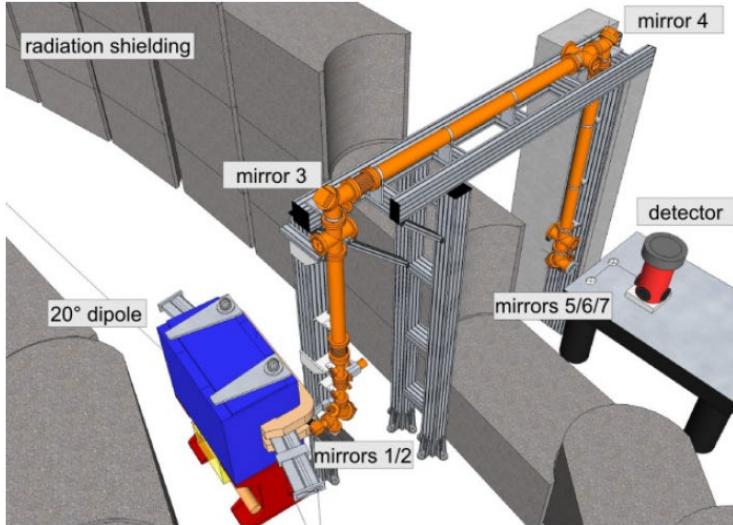

Generation of THz Radiation

Energy-modulated electrons leave a short dip in the longitudinal charge density giving rise to coherent emission of THz radiation

R. Niemczyk, Konstruktion eines Aufbaus für elektrooptische Fernfeld-Messungen an der Terahertz-Strahllinie bei DELTA Masterarbeit, Technische Universität Dortmund (2016).
P. Ungelenk, Generation and Detection Schemes for Laser-Induced Coherent Terahertz Radiation at the Electron Storage Ring DELTA, Dissertation, Technische Universität Dortmund (2015).

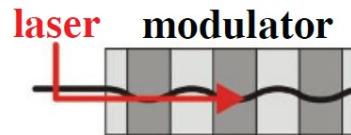

THz Beamline at DELTA

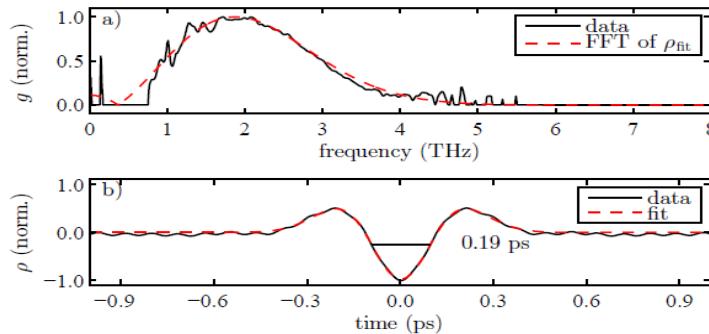

The first 20-degree dipole after the U250 undulator is the extraction point of the THz radiation

*Markus Höner, Optical Design and Construction of a Dedicated THz Beamline at DELTA and Study of Laser-Electron Interaction, diploma thesis, Technische Universität Dortmund (2011).

THz as a Diagnostic Tool

As a diagnostics tool for the laser-electron overlap

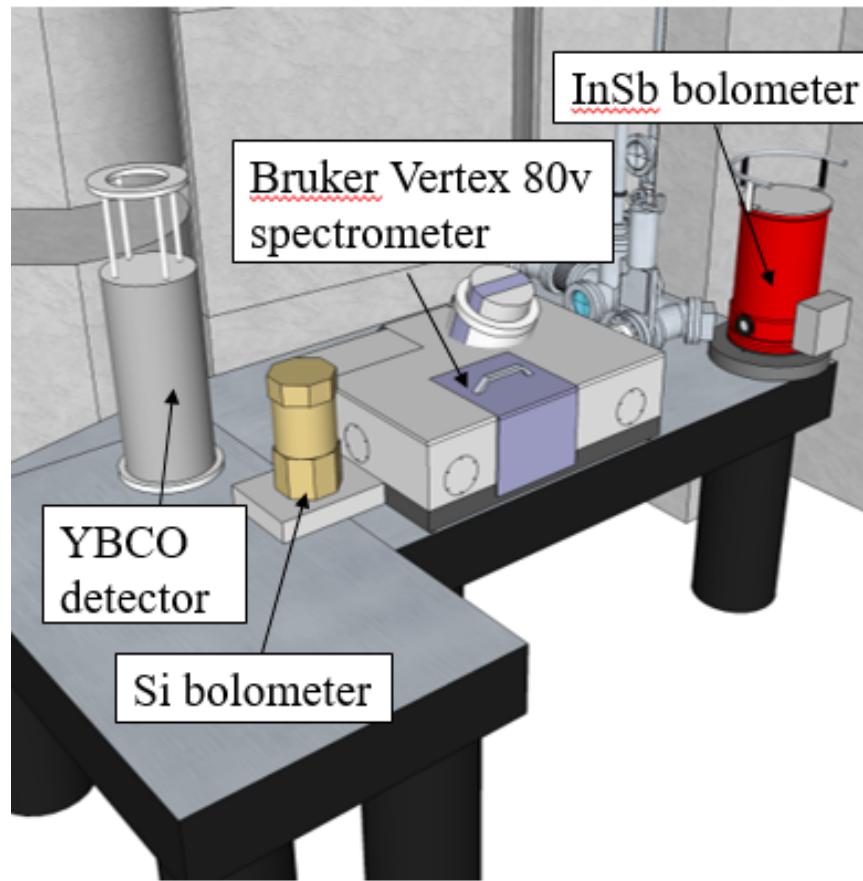

Information about the laser-induced density modulation

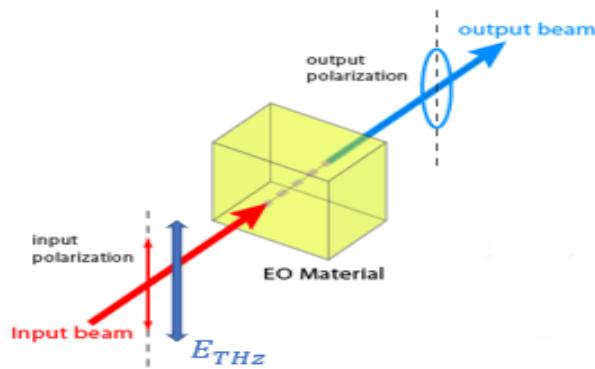

Studies of the Electron beam Dynamics, Turn-By-Turn Observation of Laser-Induced THz Radiation

THz Detectors at DELTA

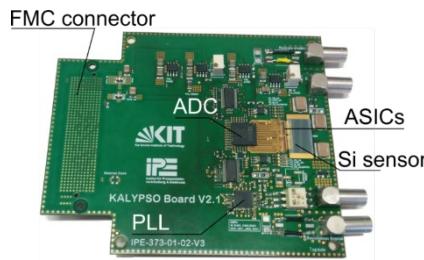

Electro-Optical (EO) Detection

Better temporal resolution

Amplitude and phase information of THz radiation

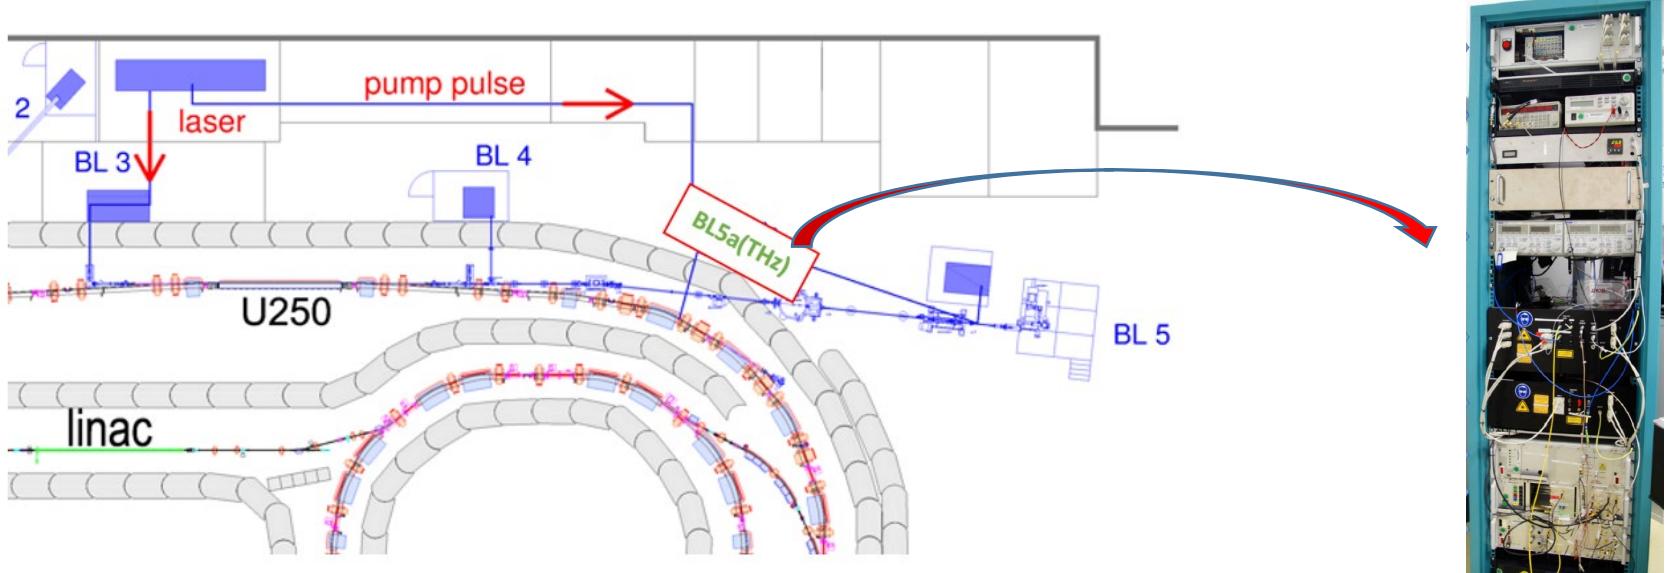

Courtesy : ANKA ,KIT

Electro-Optical Spectral Decoding : Turn-by-turn observation of THz profile with the help of KALYPSO developed by IMS, KIT

S. Casalbuoni et al., Phys. Rev. ST Accel. Beams 11, 072802 (2008)

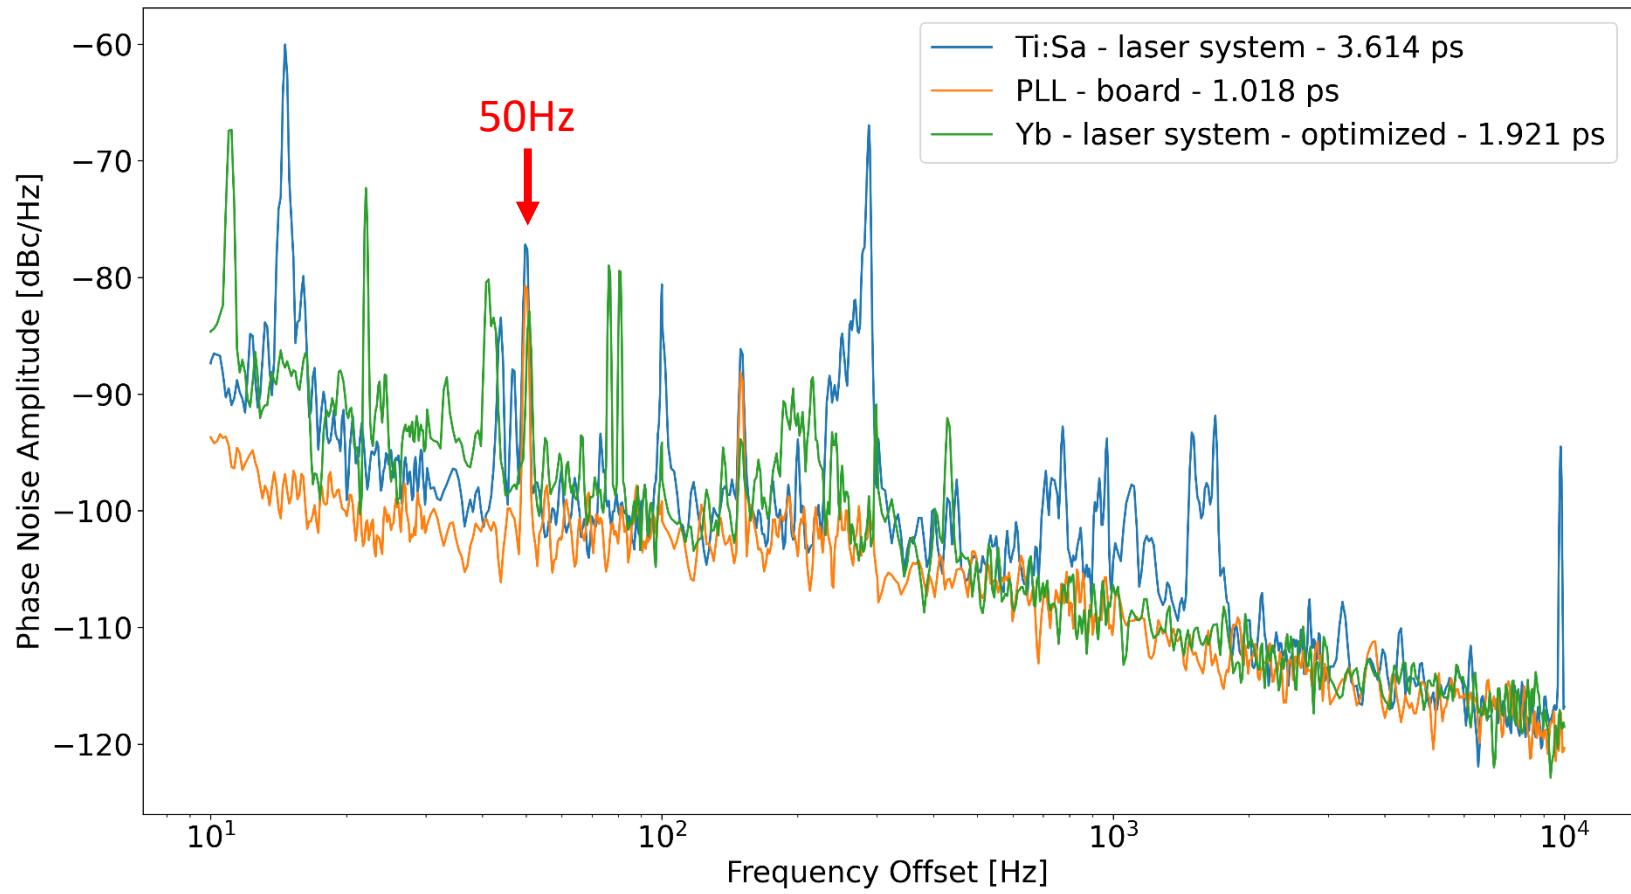

EO Detection Using 1030 nm Fiber Laser

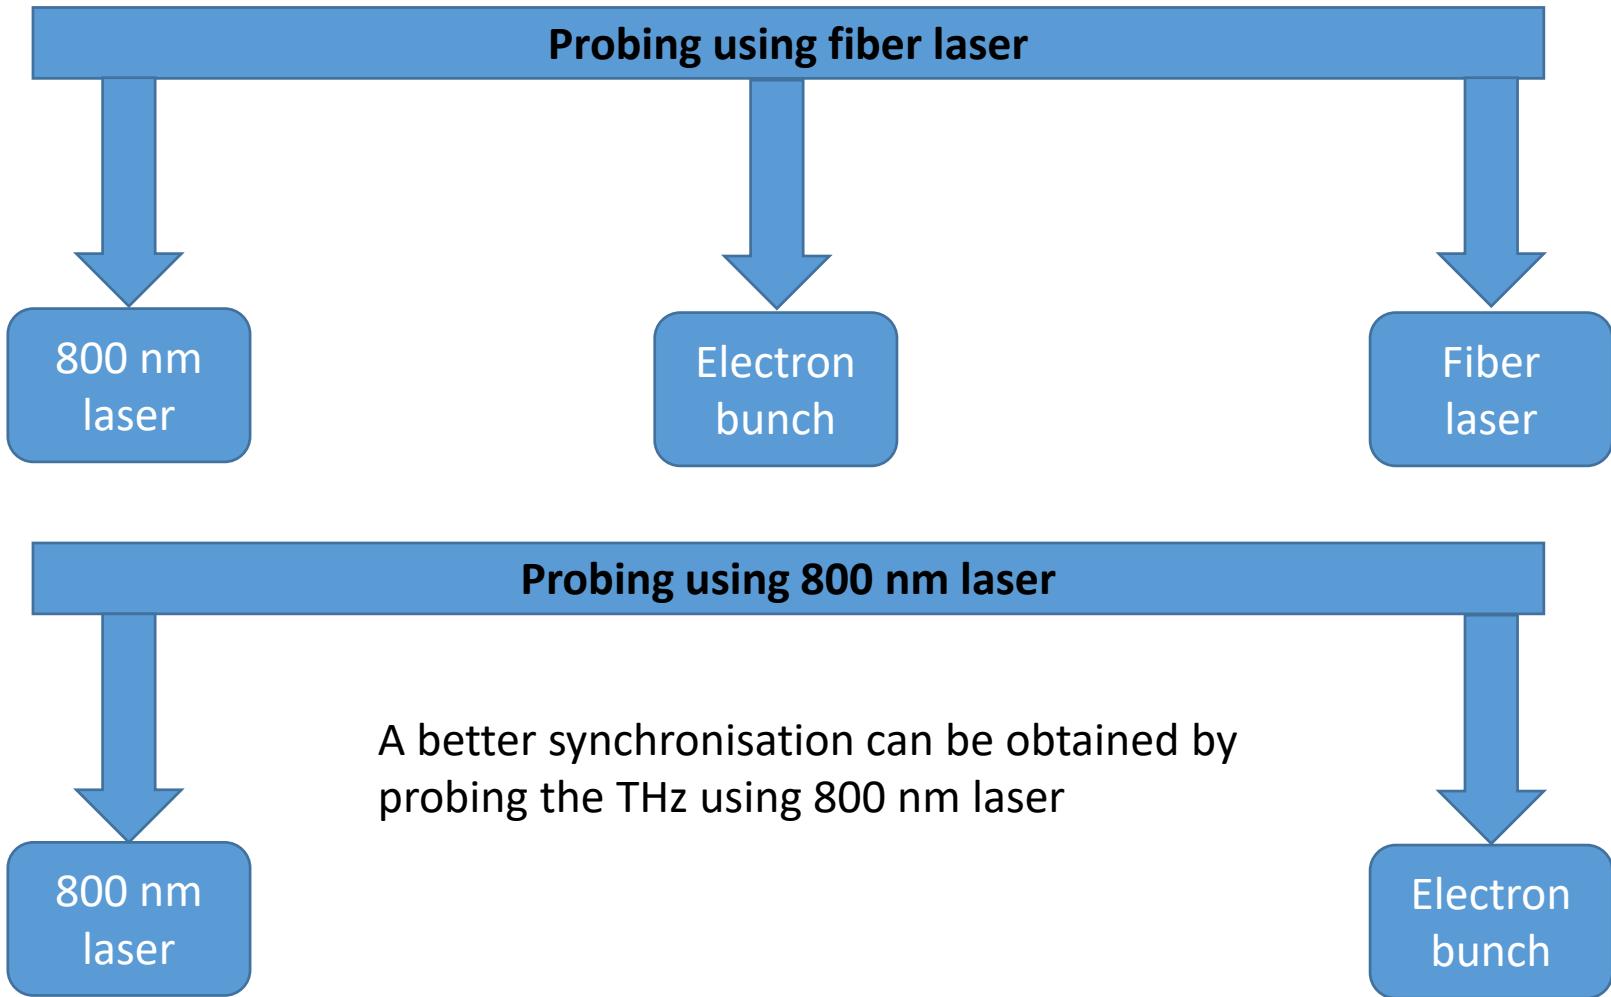

Yb-doped fiber laser system at DELTA

Could not detect EO signal because of the relative arrival time jitter between the laser pulses and electron bunch

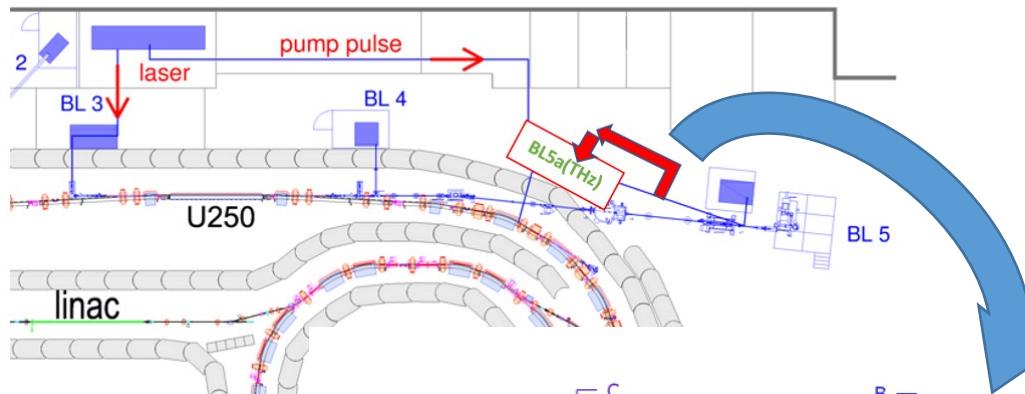

Phase noise measurement

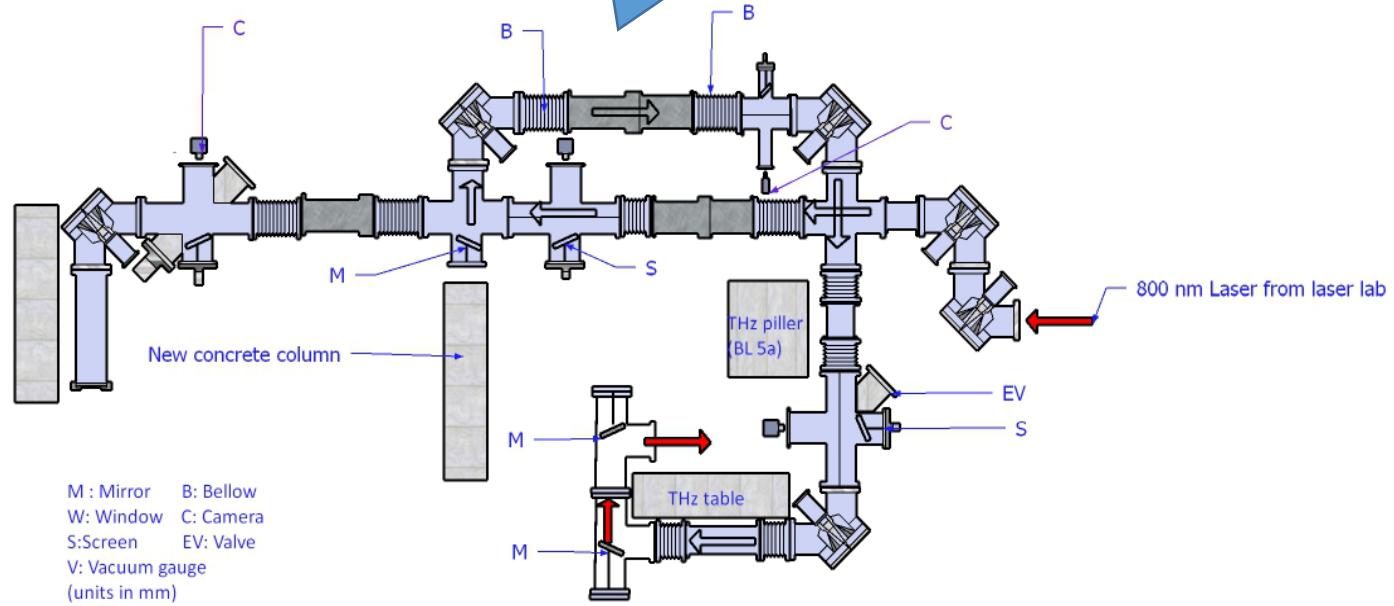

Sources of Jitter

Construction of new Laser-Beamline

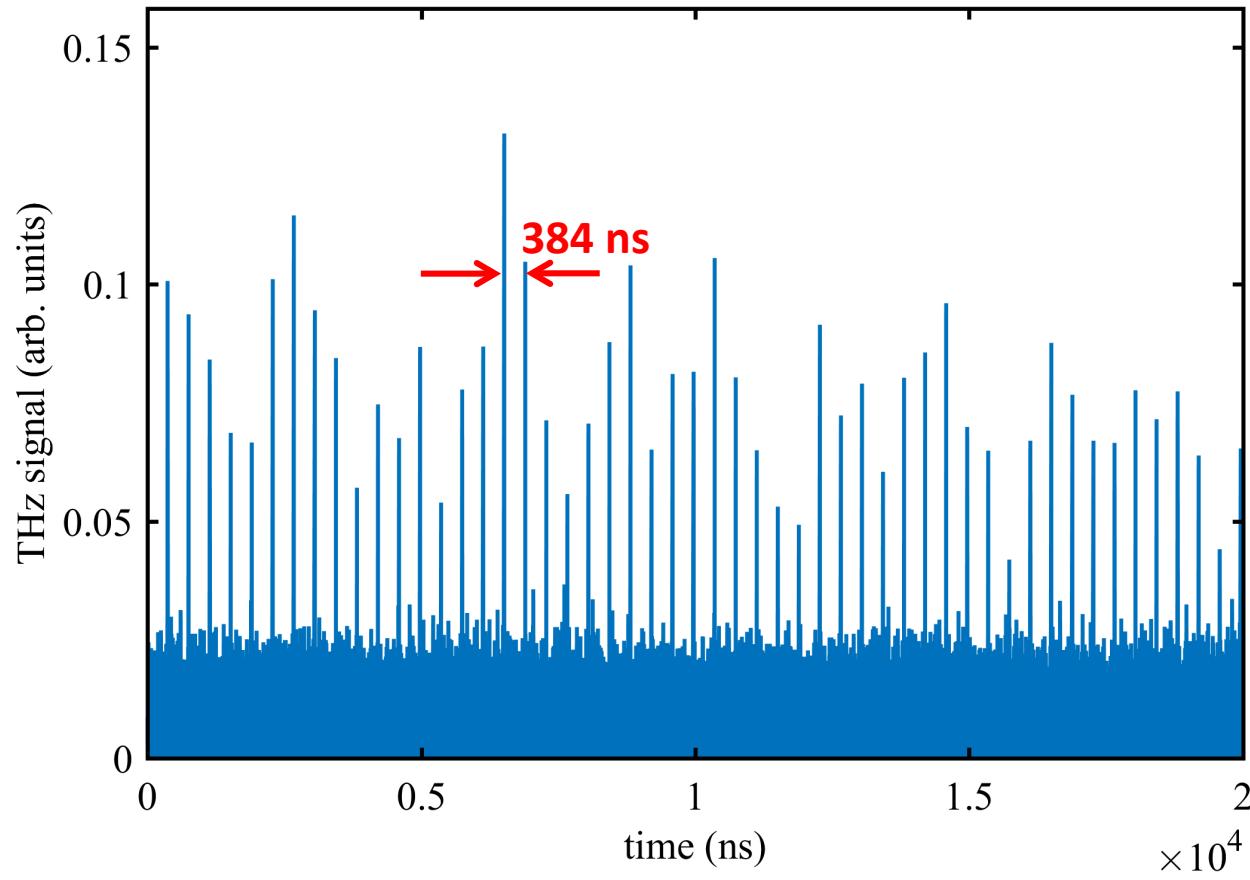

Construction of new beamline to guide 800nm laser to the THz lab

Recent Observation of Bursting THz at DELTA

Reduction of beam energy from 1492 MeV to 900 MeV

- THz bursts with repetition rate of 2.6 MHz

Thank You!
