

Dear Colleagues,

We are pleased to announce that the International Workshop on Heavy Flavour Production in Nuclear Collisions (HF-WINC2020) will be held in Torino, Italy, from Monday October 12th 2020 to Thursday October 15th 2020.

The conference will take place in the University headquarters in the very center of the city.

This workshop is the eighth one of a series, whose previous editions took place at Brookhaven National Laboratory in 2005, followed by Lawrence Berkeley National Laboratory in 2007, University of California, Los Angeles, in 2009, Purdue University in 2011, Utrecht University in 2012 and Lawrence Berkeley National Laboratory in 2015 and 2017.

The purpose of this workshop is to bring together theorists and experimentalists working on the production of quarkonium and open heavy-flavour in nuclear collisions and their role in the study of the properties of hot QCD matter. Experimental results from the LHC and RHIC experiments and the most recent theory developments in this field will be discussed, together with future directions for the heavy-flavor and quarkonium physics.

The workshop will have only plenary sessions, with invited and contributed talks. Ample time will be devoted to discussion.

The registration and the call for the abstract submission will be opened from May 1st to May 31st 2020 and the final program of the workshop will be circulated at the end of June. For reasons of space, and in the spirit of keeping a workshop format, the attendance will be limited to 100 participants.

More information on the workshop and practical details on the venue, the costs, the accommodation and how to reach Torino can be found in the workshop web page <https://indico.cern.ch/event/883427> which will be continuously updated in the next weeks/months.

The local organizing committee can be contacted via the mailing list hfwinc2020-loc@lists.infn.it.

Looking forward to welcoming you in Torino!

The HF-WINC2020 Local Organizing Committee
