

BNL Analysis Facility Usage

Light usage over the last month (avg ~400 cores)

156 batch users registered

Jupyter resources available on HPC (shared compute with harvester instance)

3 months jobdata

BNL Analysis Facility Updates

GPFS filesystem had some issues in February, but with minor impacts

Eventual migration to Lustre within next FY

Jupyter instance updated to allow passing custom Slurm parameters and option exists to have custom kernels displayed based on Slurm Account selected.

Storage and compute resources unchanged since [last update](#) (overview [here](#))
