MKB test preparation

- Started this week preparing B2, should be ready by end of the week, EC and KSC teams working in parallel of SW preparation and cleaning
- Important to check vacuum signals and validate the interlock → Christophe will start the PLC and contact Eric Page for the validation
- 3 weeks of pulsing in the planning from next week onwards
- B1 will be delayed due to an exchange of a vacuum pump in week 10, pulsing possibility confirmed for this later weeks (13 onwards)
- Check with first results from B2 if we shall/can move the decision point to have also the results from B1. This is also a fct of the prize offer and delivery time.

AOB

The envisaged new capacitors (larger) fit mechanically into the generator. Waiting for the prize offer.
