

LA FRANCE AU CERN

16^{ème} édition

Suisse
Genève
18-19 novembre 2020

► AVANT - PROPOS

État fondateur du CERN, la France est très engagée dans les projets de l'Organisation et tout particulièrement dans les grandes expériences ATLAS, CMS, LHC-b etc. ainsi que dans le grand projet d'amélioration HL-LHC (High Luminosity Large Hadron Collider). En tant que membre du CERN, la France participe pour 15 % au budget de l'Organisation.

Les physiciens, les ingénieurs et les techniciens du CNRS / IN2P3 (Centre national de la recherche scientifique / Institut national de physique nucléaire et de physique des particules) et du CEA / Irfu (Commissariat à l'Énergie atomique et aux Énergies alternatives / Institut de recherche sur les lois fondamentales de l'univers) sont depuis longtemps aux avant-postes de la recherche en physique des particules et collaborent activement avec les équipes du CERN.

L'industrie française joue également un rôle important : plus de 4000 entreprises françaises ont répondu à des appels d'offre du CERN depuis 2011 et le montant des contrats de fournitures, de services et d'utilités est en moyenne de l'ordre de 110 M CHF par an (soit environ 102 M EUR), hors fourniture de l'électricité.

Les 18 et 19 novembre 2020, près d'une vingtaine d'entreprises présentent leurs technologies innovantes au CERN dans le cadre de la 16^{ème} édition de l'exposition industrielle « La France au CERN ». Depuis une vingtaine d'années, cet événement représente une plateforme privilégiée pour la promotion du savoir-faire français dans le domaine des hautes technologies et de la coopération avec les décideurs du CERN.

L'événement « la France au CERN » est organisé, pour la première fois en numérique, par Business France, l'agence nationale au service de l'internationalisation de l'économie française.

Business France tient à remercier sincèrement Mme Fabiola Gianotti, M. Frederick Bordry, M. Thierry Lagrange, M. Anders Unnervik, M. Jérôme Pierlot, Mme Merethe Morer-Olafsen, S.E.M. François Rivasseau, M. Damien Brintet, M. Antoine Daël, M. Nicolas Berton ainsi que l'Agence Auvergne-Rhône-Alpes Entreprises, pour leur aide et leur soutien dans l'organisation de cet événement.

► BUSINESS FRANCE

Business France is the national agency supporting the international development of the French economy, responsible for fostering export growth by French businesses, as well as promoting and facilitating international investment in France.

It promotes France's companies, business image and nationwide attractiveness as an investment location, and also runs the VIE international internship program.

Business France has 1,500 personnel, both in France and in 58 countries throughout the world, who work with a network of partners.

Since January 2019, as part of the reform of the state support system for exports, Business France has given private partners responsibility for supporting French SMEs and mid-size companies in the following markets: Belgium, Hungary, Morocco, Norway, the Philippines and Singapore.

LE CERN

Le CERN

Fondé en 1954, le CERN est situé de part et d'autre de la frontière franco-suisse, près de Genève. Il est l'une des premières organisations à l'échelle européenne et compte aujourd'hui 23 États membres.

Le CERN, l'Organisation européenne pour la recherche nucléaire, est l'un des plus grands et des plus prestigieux laboratoires scientifiques du monde. Il a pour vocation la physique fondamentale, la découverte des constituants et des lois de l'Univers. Il utilise des instruments scientifiques très complexes pour sonder les constituants ultimes de la matière : les particules fondamentales. En étudiant ce qui se passe lorsque ces particules entrent en collision, les physiciens appréhendent les lois de la Nature.

Les instruments qu'utilise le CERN sont des accélérateurs et des détecteurs de particules. Les accélérateurs portent des faisceaux de particules à des énergies élevées pour les faire entrer en collision avec d'autres faisceaux ou avec des cibles fixes. Les détecteurs, eux, observent et enregistrent le résultat de ces collisions.

Le grand collisionneur de hadrons (LHC)

Le LHC est l'accélérateur de particules le plus grand et le plus puissant du monde. Il a démarré le 10 septembre 2008 et est le dernier maillon du complexe d'accélérateurs du CERN. Il consiste en un anneau de 27 kilomètres de circonférence formé d'aimants supraconducteurs et de structures accélératrices qui augmentent l'énergie des particules qui y circulent.

À l'intérieur de l'accélérateur, deux faisceaux de particules circulent à des énergies très élevées et à une vitesse proche de celle de la lumière avant de rentrer en collision l'un avec l'autre. Les faisceaux circulent en sens opposé, dans des tubes distincts placés sous un vide très poussé (ultravide). Ils sont guidés le long de l'anneau de l'accélérateur par un puissant champ magnétique, généré par des électroaimants supraconducteurs. Ces derniers sont composés de bobines d'un câble électrique spécial fonctionnant à l'état

supraconducteur, c'est-à-dire conduisant l'électricité sans résistance ni perte d'énergie. Pour cela, les aimants doivent être refroidis à -271°C, une température plus froide que celle de l'espace interstellaire. C'est la raison pour laquelle une grande partie de l'accélérateur est reliée à un système de distribution d'hélium liquide qui refroidit les aimants ainsi que d'autres systèmes annexes.

Des milliers d'aimants de types et de tailles différents sont utilisés pour diriger les faisceaux le long de l'accélérateur. Parmi eux, les aimants principaux, dont 1232 aimants dipolaires de 15m de long, utilisés pour courber la trajectoire des faisceaux, et 392 aimants quadripolaires de 5 à 7m de long qui concentrent les faisceaux. Juste avant la collision, un autre type d'aimant est utilisé pour "coller" les particules les unes aux autres, de façon à augmenter les probabilités d'une collision. Ces particules sont si minuscules que les faire entrer en collision revient à lancer deux aiguilles éloignées de 10km, l'une contre l'autre.

Le LHC à haute luminosité

Le projet de Grand collisionneur de hadrons à haute luminosité (LHC à haute luminosité) vise à pousser les performances du LHC à leur maximum pour augmenter le potentiel de découvertes après 2027. L'objectif est d'accroître la luminosité d'un facteur 10 par rapport à sa valeur nominale. Le LHC à haute luminosité a été déclaré projet prioritaire en 2013 dans le cadre de la stratégie européenne pour la physique des particules.

Le LHC à haute luminosité, qui devrait être mis en service fin 2027, permettra aux physiciens d'étudier les mécanismes connus en détail, comme le boson de Higgs, et d'observer de nouveaux phénomènes très rares qui pourraient se manifester. À titre d'exemple, le LHC à haute luminosité produira chaque année au moins 15 millions de bosons de Higgs, contre environ trois millions en 2017.

Auvergne-Rhône-Alpes is the first industrial region in France. Our experts have a very sound knowledge of the regional ecosystem and can help you identify the right partner or service provider. Contact us if you are looking for a specific skill.

Auvergne-Rhône-Alpes Entreprises is the economic development agency of Auvergne-Rhône-Alpes Region, in France. With its 130 experts in 11 local branches, it helps companies to grow, at every stage of their development, in our region, in France and on international markets.

Our missions:

- Promote the Auvergne-Rhône-Alpes region, its assets and advantages and its economic development
- Assist new companies in their set-up in Auvergne-Rhône-Alpes: technical and financial support, networking.
- Support companies in their investment, training and jobs, innovation, export, access to finance and European projects. For example by organizing regional booth in trade shows and business conventions.
- Contribute to the dynamics of regional clusters

From the design to the production of microelectronic and electronic assemblies and sub-assemblies, ADTP brings its customers' projects to life. With its complementary design office and production site, the company is involving in an innovative ecosystem to develop a smarter and more responsible industry.

Throughout the life cycle of their product, we support our customers by offering a complete offer based on 4 key phases: product design, industrialization, production and sustainability.

ADTP's development strategy is focused on 4 target markets with professional electronics needs: industrial, transport of person (railway, sustainable mobility, cable transportation), energy and research / instrumentation.

ADVANCE ENGINEERING

www.advance-eng.fr

ADVANCE Engineering offers support to nuclear operators in providing highly skilled engineers and technicians for new-build, operating facilities and decommissioning.

Design & Engineering:

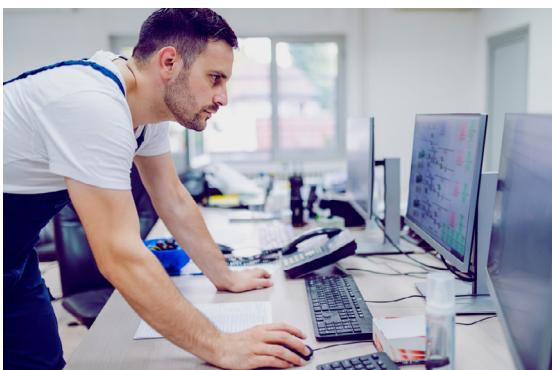

- Conceptual studies, basic and detailed design
- Engineering, design and calculation in HVAC – electrical – mechanical – civil work – layout – nuclear safety – radiation protection – piping

Project Management:

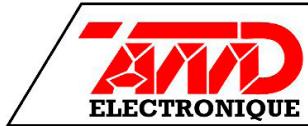

- Work supervision
- Work management, control and coordination, on-site safety
- Cost control, scheduling contract and resources management

Commissioning:

- After maintenance or facility modification
- For new build

French PME, located in Haute-Savoie (Arve Valley), specialized in connector manufacturing in many business sectors such as : Aeronautics, Industry, Nuclear, space.....

We use to develop or to adapt all together some specifical contacts to meet your own requirements but also a large range of standard contacts: MIL-C, Signal, Power, Coaxial.....from Ø 1 to 20 mm, quantity from 1 to 500 000 parts.

In order to simplify the supply chain, we manage for you all the different steps of production:

Screw-cutting, Heat treatment, Surface treatment, Color code marking, Assembly, Control at each step of the manufacturing process and unit packaging.

AXON' CABLE

AXON' CABLE

2, route de Châlons en Champagne

France

Armand HATTAT

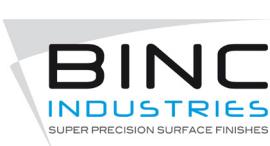

Sales Engineer
Tel.: +33 3 26 81 72 82
a.hattat@axon-cable.com

www.axon-cable.com

As an expert in wires, cable assemblies and connectors, Axon' Cable offers high performance interconnects for challenging markets including research centers and energy applications. Made with rectangular or circular connectors, cable assemblies which can be very close to the particle beam are radiation resistant. For any applications requiring resistance to high temperatures, Axon' Cable offers a large range of equipment wires insulated with PTFE, ETFE, FEP, polyimide or special compounds. They meet the severe requirements of scientific or nuclear applications and can be used as instrumentation, control and sensor cables in nuclear plants or in particle detectors. The French group employs 2300 staff worldwide.

BINC INDUSTRIES (MMP TECHNOLOGY)

BINC INDUSTRIES

10, rue du Champ Dolin
69800 SAINT-PRIEST
France

Frédéric BAJARD

COO
Tel.: +33 6 22 42 40 78
frederic.bajard@bincindustries.com

MMP TECHNOLOGY = Advanced roughness for high-tech industries aiming highest surface performance !

BINC INDUSTRIES supplies the innovative deburring and polishing process named MMP technology®. Its selective removal of roughness enables to obtain and control the super-finishes of surfaces at a level of homogeneity and reproducibility never reached before.

MMP TECHNOLOGY®, is a mechanical-physical-catalyst surface treatment applied to items placed inside a treatment tank. It can provide highly accurate selective surface finishes. The roughness level achieved by MMP TECHNOLOGY® can provide mechanical, physical, flow, chemical.... properties to the parts.

BOSSON DECOLLETAGE

guillaume.retourne@bosson-decolletage.com

Bosson Décolletage is a family company based in the Arve valley in Haute-Savoie. Proud of our 55 years of existence, we produce high-tech mechanical parts for the automotive, hydraulic, miniature engine and all types of industry. We work 100% in export with Germany, Czech Republic, United Kingdom, USA, Italy, Korea, etc.

Our know-how, our agility, our quality and our people have been the keys to our success for 55 years.

Our production capacity is based on medium and large series.

Our quality management has access to the Automotive production standards: 5S, Kanban, Kayzen, PDCA...

We develop thanks to our know-how, ourselves our range of products, our tools, thanks to our design office.

Régis BRENOT

Technical Salesman
Tel.: +33 6 11 98 07 44
regis_brenot@bradycorp.com

www.cepelec.com

For more than 30 years, Cepelec has been supporting industrial manufacturers by providing value-added solutions for:

- Reliability of electronic boards assembly processes: equipments, soldering solutions, DES control, trainings (IPC-A-610...)
- Risks identification and Lockout Tagout solutions: consignment solutions, safety audit, printers and labels, electrical authorization and lockout tagout training
- Analysis and treatment of laser pollution: analysis of particles and pollutants, extraction systems, filters...

Knowing how you work is essential for us, we always do an on-site diagnosis. Following this, a complete proposition with expertises, trainings and technical solutions is detailed to you, accompanied by a long term relationship.

CNC'DEC

Adjuster
Tel.: +33 6 05 82 26 14

CNC'DEC has a solid experience in the machining of stainless steel, titanium and extra-alloys and technical plastics. Our series range from 30 to 5000 pieces and from ø 1 to 40 mm.

Located in the Arve valley between Chamonix and Annecy, the business has always found its place in a very competitive world. Working in a wide variety of panel such as medical, sports, capital goods, etc., we know the requirements of each sector to advise you as good as possible on the design of your products, taking care manufacture and final quality.

CNC'DEC, a company with experience in the panel of machining, will be able to help you in the life of your products through the co-design, production and industrialization of products.

We are listening to you!

HIGH-END TECHNOLOGICAL PARTS from 1 to 80 mm. DIFFERENT FROM OTHERS

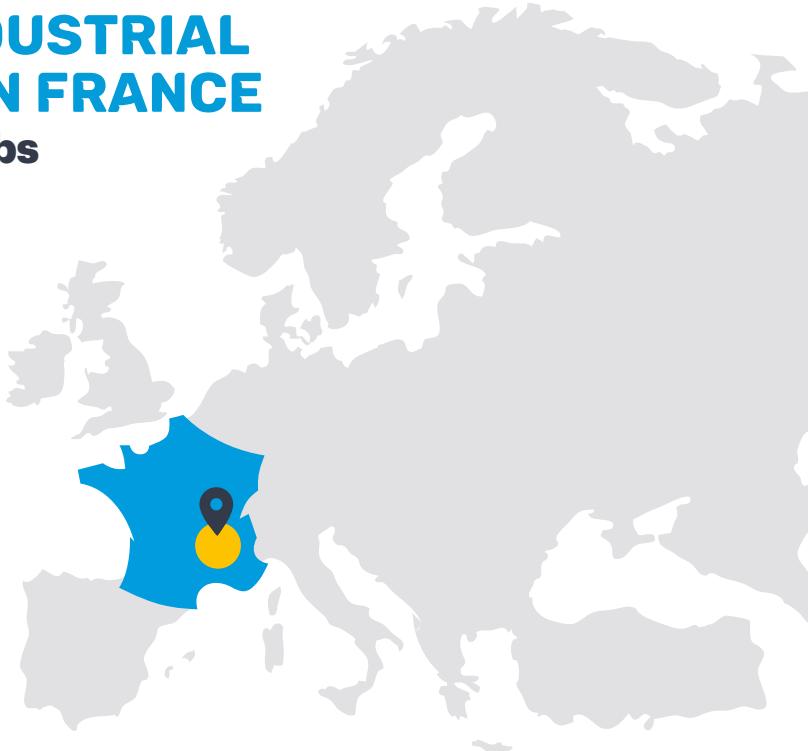

- Work on product definition before execution
- Work with customers and material manufacturers to develop mechanical characteristics and coating solutions of new electrical and magnetic contacts
- Machine difficult materials, lead-free copper, refractory alloys, titanium
- Deliver parts made to desired geometry: single and multiple bending, "spring" shapes
- Innovative R&D solutions
- Integrate artificial intelligence, machine learning, competitiveness, flexibility, real time monitoring, flow efficiency, traceability
- Implement computer models to automate, control and trap appearance non-conformity
- Develop technical design data exchange
- Focus: Quality & Cost
- Respect environment

Trading and maintenance of technical solutions in the field of industrial transmissions

- Proven technical experience: existence since 1989 with 1000+ customers & Brand policy with more than 300 suppliers and about twenty reference partner brands
- An independent sized company: Located in Chavanod (Annecy), 20 people with complementary skills
- Maintenance 4.0: On-site with comprehensive care to ensure the best advice thanks to connected device

(Corrective, Preventive, Predictive and Prescriptive maintenance with stock of critical parts: 600 electric motors, 200 gearbox, etc.)

Solcera is an independent French company, with 2 facilities in the Paris area that serve challenging markets such as nuclear, aeronautics & space, defense, energy, scientific research. Formerly known as Vermetal, the Moissy-Cramayel location provides a variety of precision components, using ceramic-to-metal and glass-to-metal technologies. We have been co-developing with particle accelerators and large scientific instruments worldwide, supplying components such as ceramic parts, feedthroughs, connectors, RF antennas. More recently, Solcera has been producing even more challenging parts such as cover-flanges fitted with 18 to 48-low and high voltage feedthroughs, meeting CERN requirements in terms of pressure, voltage, and leak tightness.

Technetics Group is the leader of custom-designed High-Performance Sealing Solutions in Demanding Environments for critical applications in the fields of research, energy, life sciences, flow control, aerospace, semiconductor and others. Today's sealing requirements for UHV and UHP are more demanding than ever before. Through extensive research at MAESTRAL®, a joint R&D laboratory TECHNETICS/CEA, we have developed high-performance seals and sealing solutions to solve these demanding applications. Technetics currently supplies the major engineering and research centers. Due to their strong strategic stake, Technetics' seals and sealing solutions enhance the sub-assemblies in which they are fitted.

Only 30 min from Geneva, TECHNICIMES provides innovative and tailor-made solutions in the area of complex mechanical systems.

Thanks to 30 years of experience (with multinational key accounts, startups, laboratories), we bring together technical expertise (kinematics, low temperature sealing, magnetic flux, locking systems, under pressure systems) and transverse expertise (eco-design, UX-design, project management) to achieve safe and reliable solutions.

Our customers appreciate our agility and ability to integrate multidisciplinary innovative projects at each step (from functional specifications to equipment implementation). Meeting the challenging expectations of customers evolving in constraint environments is at the heart of our DNA.

Velan France is one of the world's leading valve manufacturer of high performance valve for nuclear, LNG and cryogenic applications. With more than 40 years of field experience and technical expertise we are able to supply any major project requiring first class quality and perfect reliability. Our cryogenic control valves and safety relief valves have been supplied for super conductivity applications, particle accelerators, nuclear fusion, rocket launching pads, Helium and Hydrogenic liquefiers.

VIOLET INDUSTRIES is designing and producing specific metallic racks. Our both sites located in France, near Annecy and in Romania, near Brasov with 150 people working all together. We help you to package and transport your products along your supply chain.

Racks, trolleys, boxes, containers are one of the products we design to store and handle your production whatever it is: nuclear waste, truck parts, counterweights for the earthmoving industry, syringes for medical care or air conditioning amenities.

We can do a tailor-made design with Solidworks and Simulation Software.

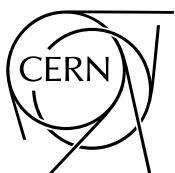

All the production is integrated in our 18 000 m² covered workshops with every step of production from cutting to painting.
