Relativistic fluid dynamics of multiple conserved charges

Jan Fotakis
University of Frankfurt
fotakis@itp.uni-frankfurt.de

Harri Niemi, Etele Molnár, Moritz Greif, Gabriel Denicol, Dirk Rischke, Carsten Greiner
Motivation

Traditionally:

Viewed as ‘blob’ of **one type of matter** (single component) with **one velocity field**

- usually ‘blob’ of energy
  with conserved particle number
Motivation

Traditionally:

Viewed as ‘blob’ of **one type of matter** (single component) with **one velocity field**

- usually ‘blob’ of energy with conserved particle number

In general:

Consists of **multiple components** with **various properties** with **multiple velocity fields**

- with **multiple conserved quantities** (e.g. energy, electric charge, baryon number, strangeness, …)
- mixed chemistry → **coupled charge currents!**
Motivation

Increasing interest in the recent years ...

Fluid dynamics of multi-component systems

Hydrodynamics: macroscopic effective field theory of thermal matter close to local equilibrium

Here: single fluid velocity field \( u^\mu \)

Conservation of Energy and Momentum:
\[
\partial_\mu T^{\mu \nu} = 0
\]

Conservation of charge:
\[
\partial_\mu N^\mu_q = 0
\]
Fluid dynamics of multi-component systems

Hydrodynamics: macroscopic effective field theory of thermal matter close to local equilibrium

Here: single fluid velocity field $u^\mu$

Conservation of Energy and Momentum: \[ \partial_\mu T^{\mu\nu} = 0 \]

\[
T^{\mu\nu} = \sum_i T_i^{\mu\nu} = \epsilon u^\mu u^\nu - (P_0 + \Pi)\Delta^{\mu\nu} + \pi^{\mu\nu}
\]

$q$-th conserved charge (eg. B,Q,S)

Conservation of charge: \[ \partial_\mu N_q^{\mu} = 0 \]

\[
N_q^{\mu} = \sum_i q_i N_i^{\mu} = \mathbf{n}_q u^\mu + V_q^{\mu}
\]
Fluid dynamics of multi-component systems

**Hydrodynamics:** macroscopic effective field theory of thermal matter close to local equilibrium

**Here: single fluid velocity field** $u^\mu$

Conservation of Energy and Momentum: $\partial_\mu T^{\mu\nu} = 0$

$T^{\mu\nu} = \sum_i T_i^{\mu\nu} = \epsilon u^\mu u^\nu - (P_0 + \Pi) \Delta^{\mu\nu} + \pi^{\mu\nu}$

$q$-th conserved charge (eg. B,Q,S)

Conservation of charge: $\partial_\mu N_{[q]}^{\mu} = 0$

$N_{[q]}^{\mu} = \sum_i q_i N_i^{\mu} = n_q u^\mu + V_{[q]}^{\mu}$

$10 + 4N_{ch}$ degrees of freedom, $4 + N_{ch}$ equations $\rightarrow 6 + 3N_{ch}$ unknowns
Fluid dynamics of multi-component systems

Hydrodynamics: macroscopic effective field theory of thermal matter close to local equilibrium

Here: single fluid velocity field $u^\mu$

Conservation of Energy and Momentum: $\partial_\mu T^{\mu\nu} = 0$

$$T^{\mu\nu} = \sum_i T_i^{\mu\nu} = \epsilon u^\mu u^\nu - (P_0 + \Pi) \Delta^{\mu\nu} + \pi^{\mu\nu}$$

Conservation of charge: $\partial_\mu N_q^\mu = 0$

$$N_q^\mu = \sum_i q_i N_i^\mu = n_q u^\mu + V_q^\mu$$

10 + 4$N_{ch}$ degrees of freedom, 4 + $N_{ch}$ equations $\rightarrow$ 6 + 3$N_{ch}$ unknowns

What needs to be known:

- Equation of state $P_0 = P_0(\epsilon, n_q), \ T = T(\epsilon, n_q), \ \alpha_q = \mu_q / T = \alpha_q(\epsilon, n_q)$
- Equations of motion for dissipative fields & transport coefficients $\Pi, V_q^{\mu}, \pi^{\mu\nu}$
- Initial state
- Final state: freeze-out and $\delta f$-correction
Deriving fluid dynamics from kinetic theory

On basis of **DNMR theory**: derivation from the Boltzmann equation with method of moments

Fotakis et al., arXiv:2203.11549

Relativistic Boltzmann eq.

\[ k_i^{\mu} \partial_{\mu} f_{i,k} = C_i[f_i] \]

2nd-order (multi-component) hydro

\[ \vec{I}, \quad \vec{V}_{q}^{\langle \mu \rangle}, \quad \pi^{\langle \mu \nu \rangle} \]
Deriving fluid dynamics from kinetic theory

On basis of **DNMR theory**: derivation from the Boltzmann equation with method of moments

Also refer to: [Fotakis et al., arXiv:2203.11549]

relativistic Boltzmann eq.

\[ k_i^{\mu} \partial_{\mu} f_{i,k} = C_i[f_i] \]

\[ \hat{\Pi}, \hat{V}_q^{\langle \mu \rangle}, \hat{\pi}^{\langle \mu \nu \rangle} \]

\[ f_{i,k} = f_{i,k}^{(0)} + \delta f_{i,k} \]

2\textsuperscript{nd}-order (multi-component) hydro
Deriving fluid dynamics from kinetic theory

On basis of DNMR theory: derivation from the Boltzmann equation with method of moments

Fotakis et al., arXiv:2203.11549

relativistic Boltzmann eq.

\[ k_i^{\mu} \partial_{\mu} f_{i,k} = C_i[f_i] \]

2\textsuperscript{nd}-order (multi-component) hydro

\[ \hat{\Pi}, \quad \hat{V}_{q}^{(\mu)}, \quad \hat{\pi}^{(\mu \nu)} \]

Irreducible off-equilibrium moments obey Boltzmann eq.:

\[ f_{i,k} = f_{i,k}^{(0)} + \delta f_{i,k} \]

Problem: infinitely many coupled PDEs.

\[ \rho_{i,n}^{\mu \nu} = \sum_{i=1}^{N_{\text{species}}} \int \frac{d^3k_i}{(2\pi)^3} \frac{E_{i,k}}{F_{i,k}} E_{i,n}^{(\mu)} k_i^{(\mu \nu)} \delta f_{i,k} \]

Aim: Truncate in a well-defined manner (“perturbation theory”)
Deriving fluid dynamics from kinetic theory

Denicol et al., PRD 85, 114047 (2012)

On basis of **DNMR theory**: derivation from the Boltzmann equation with method of moments
Fotakis et al., arXiv:2203.11549

**Aim:** Truncate in a well-defined manner (perturbation theory)

“Order-of-magnitude approximation”:
relate them to the dissipative fields with constituent’s transport coefficients

$$\rho^{\mu\nu}_{i,n} = \frac{\eta_i,n}{\eta} \pi^{\mu\nu} + \mathcal{O}(2)$$

**Counting scheme:**
Gradients in velocity, temperature etc.  $\sigma^{\mu\nu} \sim \mathcal{O}(1), \mathcal{O}(Kn)$
Dissipative fields  $\pi^{\mu\nu} \sim \mathcal{O}(1), \mathcal{O}(Rn^{-1})$

Equations of motion with multiple conserved charges

$2^{nd}$-order (multi-component) hydro

$\dot{\Pi}, \dot{V}_q^{(\mu)}, \dot{\pi}^{(\mu\nu)}$

Relaxation equations

(Israel-Stewart-type causal theory)

$\tau_{II}\ddot{\Pi} + \Pi = S_{II}$

$\sum q' \tau_{qq'} \dot{V}_q^{(\mu)} + V_q^{\mu} = S_q^{\mu}$

$\tau_{\pi} \dot{\pi}^{(\mu\nu)} + \pi^{\mu\nu} = S_{\pi}^{\mu\nu}$

upcoming publication!

Hydrodynamic (1+1)D-simulation with SHASTA

\[ \Pi \equiv 0, \quad \pi^{\mu\nu} \equiv 0, \quad \tau_q \dot{V}_q^{(\mu)} + V_q^{\mu} = \sum_{q'} \kappa_{qq'} \nabla^\mu \left( \frac{\mu_{q'}}{T} \right) \]
Simplistic case study: no viscosity, diffusion only, no 2\textsuperscript{nd}-order terms, conserved B and S charge, classical, hadronic system (19 species), realistic binary elastic cross sections

Hydrodynamic (1+1)D-simulation with SHASTA

$$\Pi \equiv 0, \quad \pi^{\mu\nu} \equiv 0, \quad \tau_q \hat{V}_q^{(\mu)} + V_q^\mu = \sum_{q'} \kappa_{qq'} \nabla^\mu \left( \frac{\mu_{q'}}{T} \right)$$
Coupled charge-transport

Mixed chemistry couples diffusion currents and introduces charge-correlation through EoS

\[ \mu_S \equiv \mu_S(\epsilon, n_B, n_S) \]

e.g.:

\[ \nabla^\mu \alpha_S \sim \nabla^\mu n_B \]

Generation of domains of non-vanishing local net charge (here net strangeness)!

Second-order transport coefficients not consistent with assumed system

\[ \rightarrow \text{generation of unphysical charge currents} \]

Consistency is important in charge transport! Use multi-component expressions.
Conclusion

• Derived 2\textsuperscript{nd}-order relativistic fluid dynamic theory for multicomponent systems from the Boltzmann equation
• Transport coefficients given explicitly containing all information about particle interactions
• Mixed chemistry couples diffusion currents to each other \(\rightarrow\) coupled charge-transport
• Consistency of EoS, 1\textsuperscript{st} and 2\textsuperscript{nd} transport coefficients is important!
• Thermal features from LQCD can be adapted in transport coefficients with quasi-particle models
• Implemented derived fluid dynamic theory in (3+1)D-hydro code

Outlook

• Evaluate 2\textsuperscript{nd} order transport coefficients for more realistic systems
• Use more realistic initial state and equation of state
• Apply freeze-out routines, take \(\delta f\)-correction
• Find observables sensitive to charge-coupling \(\rightarrow\) investigate impact
Equation of state with multiple conserved charges

\[ P_0(T) \rightarrow P_0(T, \mu_B, \mu_Q, \mu_S) \]
