

ALICE

# VS tests

Massimo Lamanna

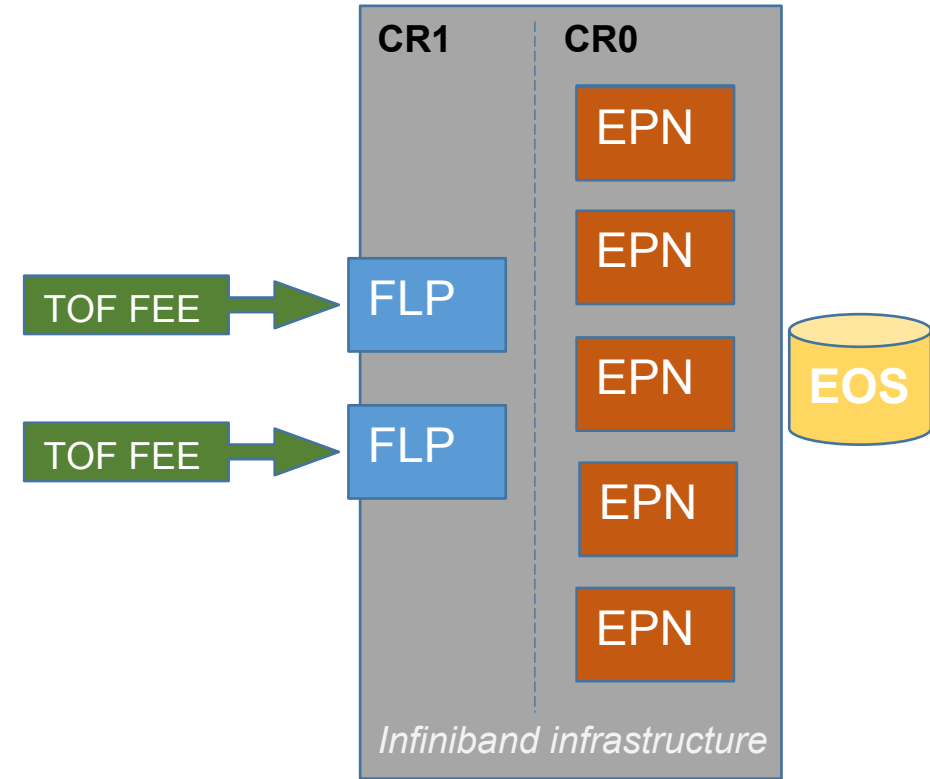

for the O2 Vertical-Slice Test Crew

Extension/update of the presentation at the VS integration meeting: <https://indico.cern.ch/event/895728/>

# VS tests

- Preparation
  - HW and SW on FLP and EPN
  - 2 TOF FLPs moved to VS using their LTU
  - 5 EPN nodes (config + orchestrator process)
- Thu + first part of Fri
- Part 1 (more manual)
  - **FEE** → **CRU** → **readout** → **sTFbuilder**
  - **FEE** → **CRU** → **readout** → **sTFbuilder** → **sTFsender** → **TFbuilder**
- Part 2 (use of ECS and use of QC)
  - ECS to control the FLP part
  - ECS to control QC on FLP (some residual problem)
- This exceeded the minimal goals as stated in Jira
  - **Congrats to all parties!!!**

# Data

- About 300 data files (45 GB) on each of the 5 EPNs
  - ~1500 files in total corresponding to 15,000 TFs (10 TFs in a file)
    - 225GB in total
  - About 350 s acquisition
    - 22ms TF
    - 600 MB/s (300 MB/s per FLP; 2.5 Gb/s to be compared with the 70+ Gb/s measured qualifying the nodes in the FLP EDR/PRR.
- File moved to EOS
  - Asynchronously via external script
  - Dirs structure being standardised (important for detector commissioning)

## Sample files given to TOF

- Understand the format
- Verify the absence of data corruption (TOF team)
- Access to the entire repository prepared (as for TPC)

Readout data since SOR

193 kB

Readout current data rate

0 bps

Readout data over time since SOR

Readout data rate since SOR

# MCH

- 2 FLPs
- 41 EPNs
- Data:
  - 5000 files
  - 7TB

# Next steps (March-beginning of April)

- **Week 10**
  - First TOF test (two-click run)
- **Week 11**
  - MCH test: focus on QC/DPL; EPN controls?
- **Week 12**
  - VS tests (12 FLPs + 90 EPNs?)
  - Sources: CRUs (no detectors)
- **Week 13**
  - HMPID tests: CRORC detector
- **Week 14**
  - *TOF tests reloaded*
  - *Compressor? QC?*

# Lessons learned

- **Informal post-mortem meetings being organised**
  - Write down observed problems
- **Integration glitches more than principle problems: e.g.**
  - QC could start but we could not retrieve data
    - Plus high CPU usage
  - In a start/stop/start sequence sTFbuilder crashed
    - To be investigated
- **Simple instructions needed**
  - Avoid **all** experts on-line even when everything is smooth
    - Part of the growth process
  - N.B. exceptional commitment and responsiveness from all the teams
