CERN Cloud Infrastructure status update

Thursday, 15 October 2020 10:10 (20 minutes)

CERN's private OpenStack cloud offers more than 300,000 cores to over 3,500 users with services for compute, multiple storage types, baremetal, container clusters, and more.

The cloud supports CERN's web and administration services and is the tier 0 site in the WLCG.

This update will cover the evolution of the cloud over the past year, and the plans for the upcoming year.
