ROOT Issues
=> Github?

Axel Naumann, 2020-03-24

Content

- What's Considered
- ROOT @ Jira
- Collected feedback from team
- Github Issues: Quick Intro
- Project Management with Github Issues
- Experiments
- Conclusion

What's Considered

New Bug Reports @ Github

- Github offers "Issues" for bug reports; data is exportable
- New bug reports would have to be entered there
  - Jira closed for bug submission, only handling of existing bugs
- Will not migrate existing bugs from Jira into Github
  - No need (assumption: Jira will be kept)
  - Saves lots of extra effort

ROOT @ Jira

Projects @ sft.its.cern.ch

- ROOT #1 with >10k issues
  - Out of 24k total on that Jira instance
- LHCb Deployment: 4k
- CORAL / COOL: 3k
- All others < 3k

Projects

- 19 projects in total
- Lots of cross-talk
  - Resolution state
  - Labels
- Coordination of ROOT settings vs the others

- Unresolved
- Fixed
- Completed
- Won't Fix
- Duplicate
- Incomplete
- Not Needed
- Cannot Reproduce
- Clarified
- Ready for test
- Not a Bug
- Deployment/Config Problem
- Expired
- Done
- None
- Cancelled
- Invalid
- Postponed
- Remind
- Work in progress
- Need Info
- Won't Do
- Done, untested
- Fixed - Deployed
- Fixed, waiting for confirmation
- Moved
- Fixed - Not deployed
- Unresolved

Team Feedback

Why to Stay With Jira

- Binding ourselves even more to commercial platform that we don’t control
- Not sure to which extent github can replace project management (e.g. bug report plots) - see this meeting
- We cannot customize the Github interface
- We would have to live with two systems (JIRA and Github issues) for quite some time (forever?)
- Would need to combine issue stats from Jira (old issues) and Github (new)

Why to move

- Philippe cannot edit Jira tickets in his Firefox; works for Github
- Lower barrier to entry for physicists to report ROOT bugs
  - No need for CERN account
  - Report templates, see e.g. https://github.com/numba/numba/issues/new/choose
- Project management features of GitHub Issues such as milestones, checklists, progress bars - see this meeting

Why to move

- Publicly visible, tighter integration between bug reports, PRs and code: cross-references, issues auto-closed by PRs, branch-dependent URLs
- Better notification emails: targeted; relevant info
- Markup language consistent with "the rest of the world": github PR reviews (obviously), Jekyll, codimd
- More streamlined interface

What's that?!

Github Issues: Quick Intro

New Issue

Issue: Bug Report

Create a report to help us improve Numba. If this doesn't look right, choose a different type.

Title

Write | Preview

```
<!--

Thanks for opening an issue! To help the Numba team handle your information
efficiently, please first ensure that there is no other issue present that
already describes the issue you have
(search at https://github.com/numba/numba/issues?&q=is%3Aissue).

For more general "how do I do X?" type questions, please speak to us in real
time on https://gitter.im/numba/numba or post to the Numba mailing list
https://groups.google.com/a/continuum.io/forum/#!forum/numba-users.

-->

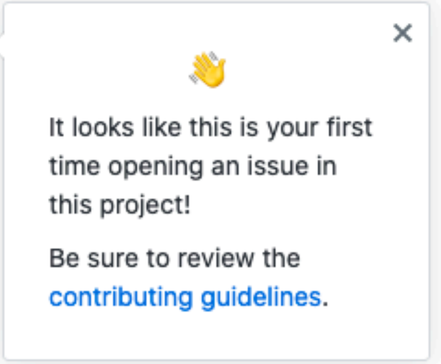
## Reporting a bug
```

Attach files by dragging & dropping, selecting or pasting them.

Styling with Markdown is supported

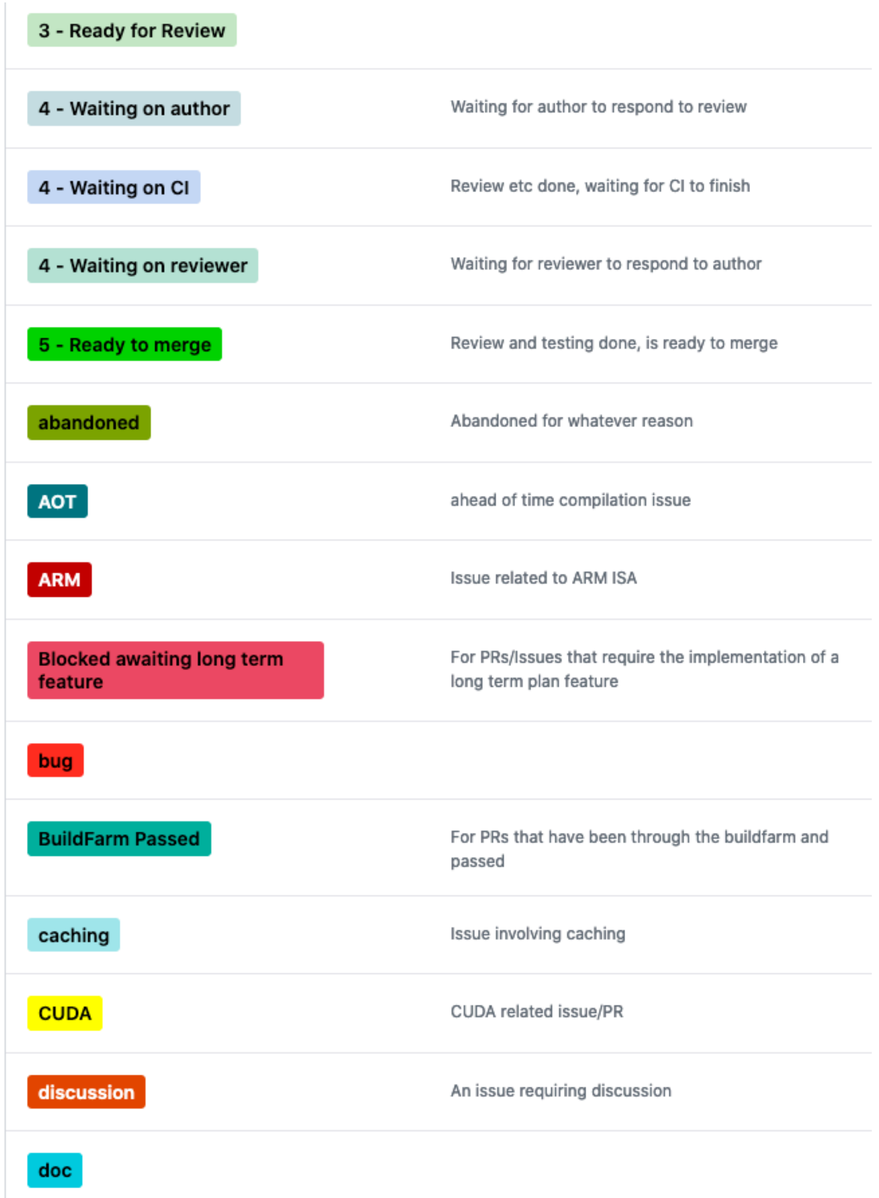
Submit new issue

Remember, contributions to this repository should follow its contributing guidelines.



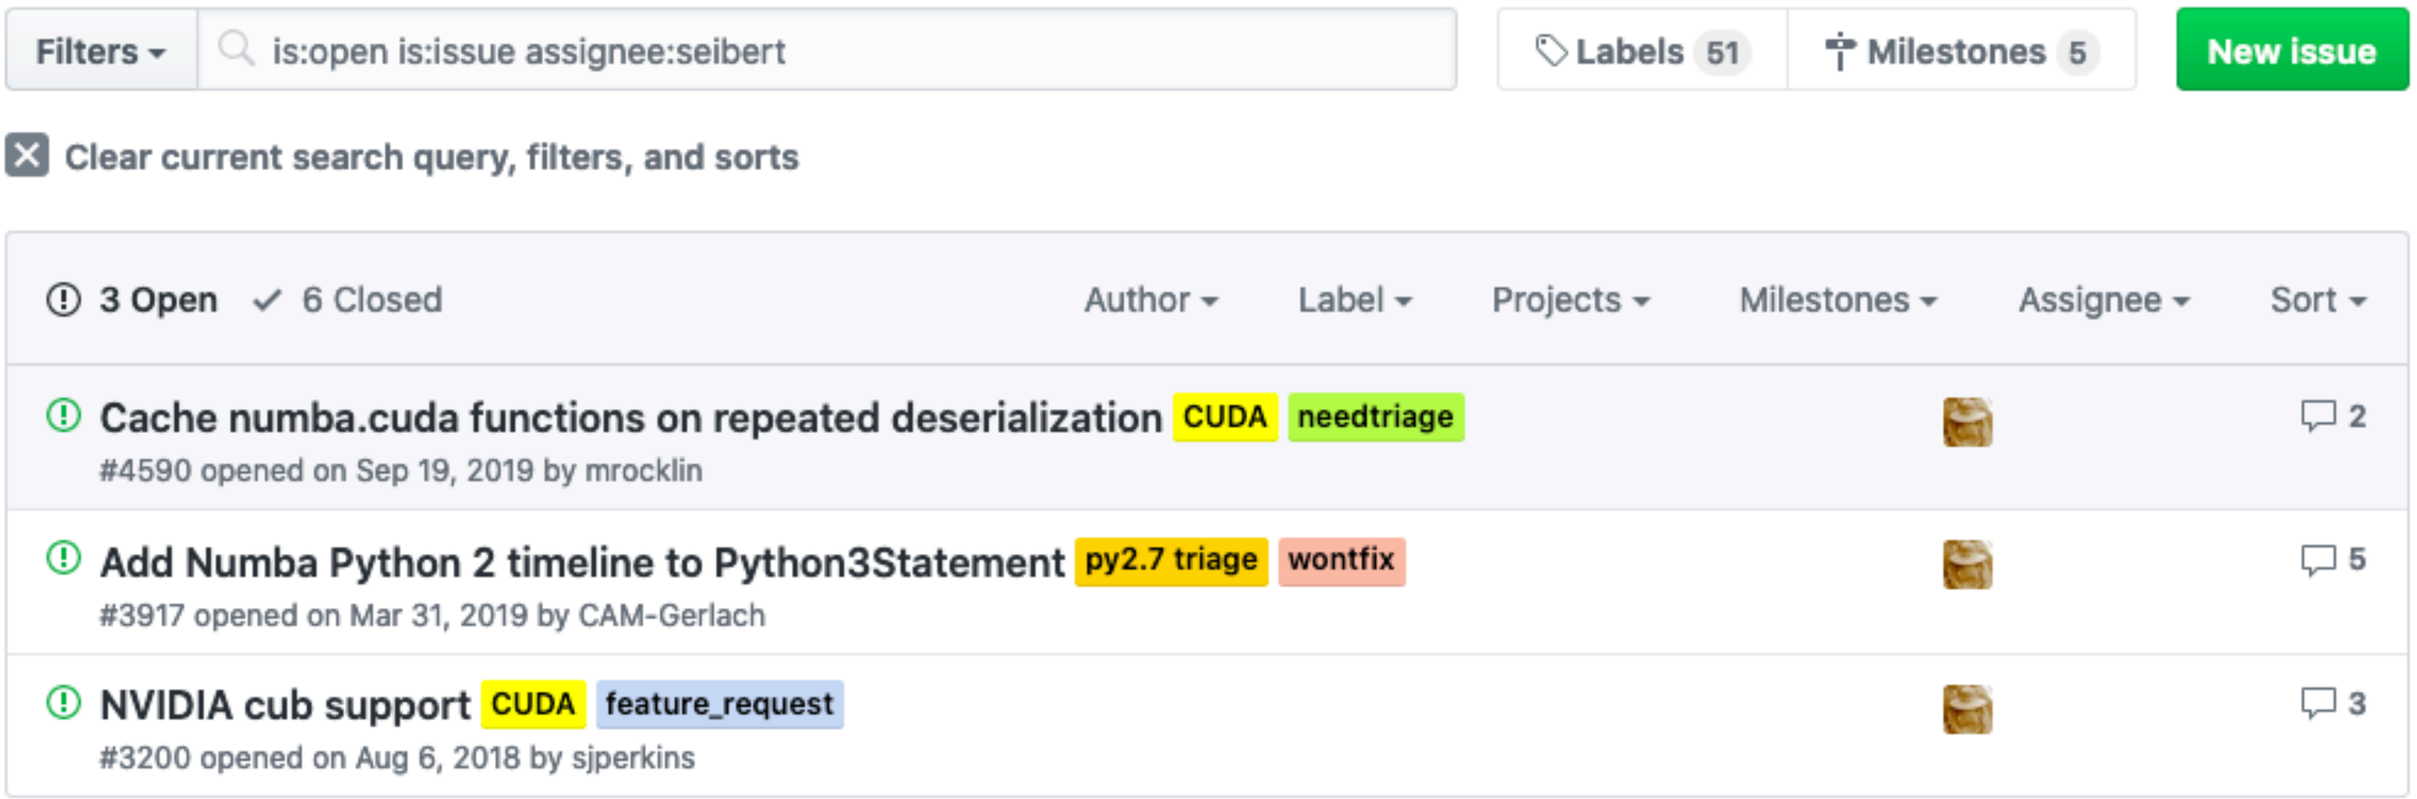
Issue Labels

- Used for triaging, prioritization, and labelling
  - Example from https://github.com/numba/numba/labels

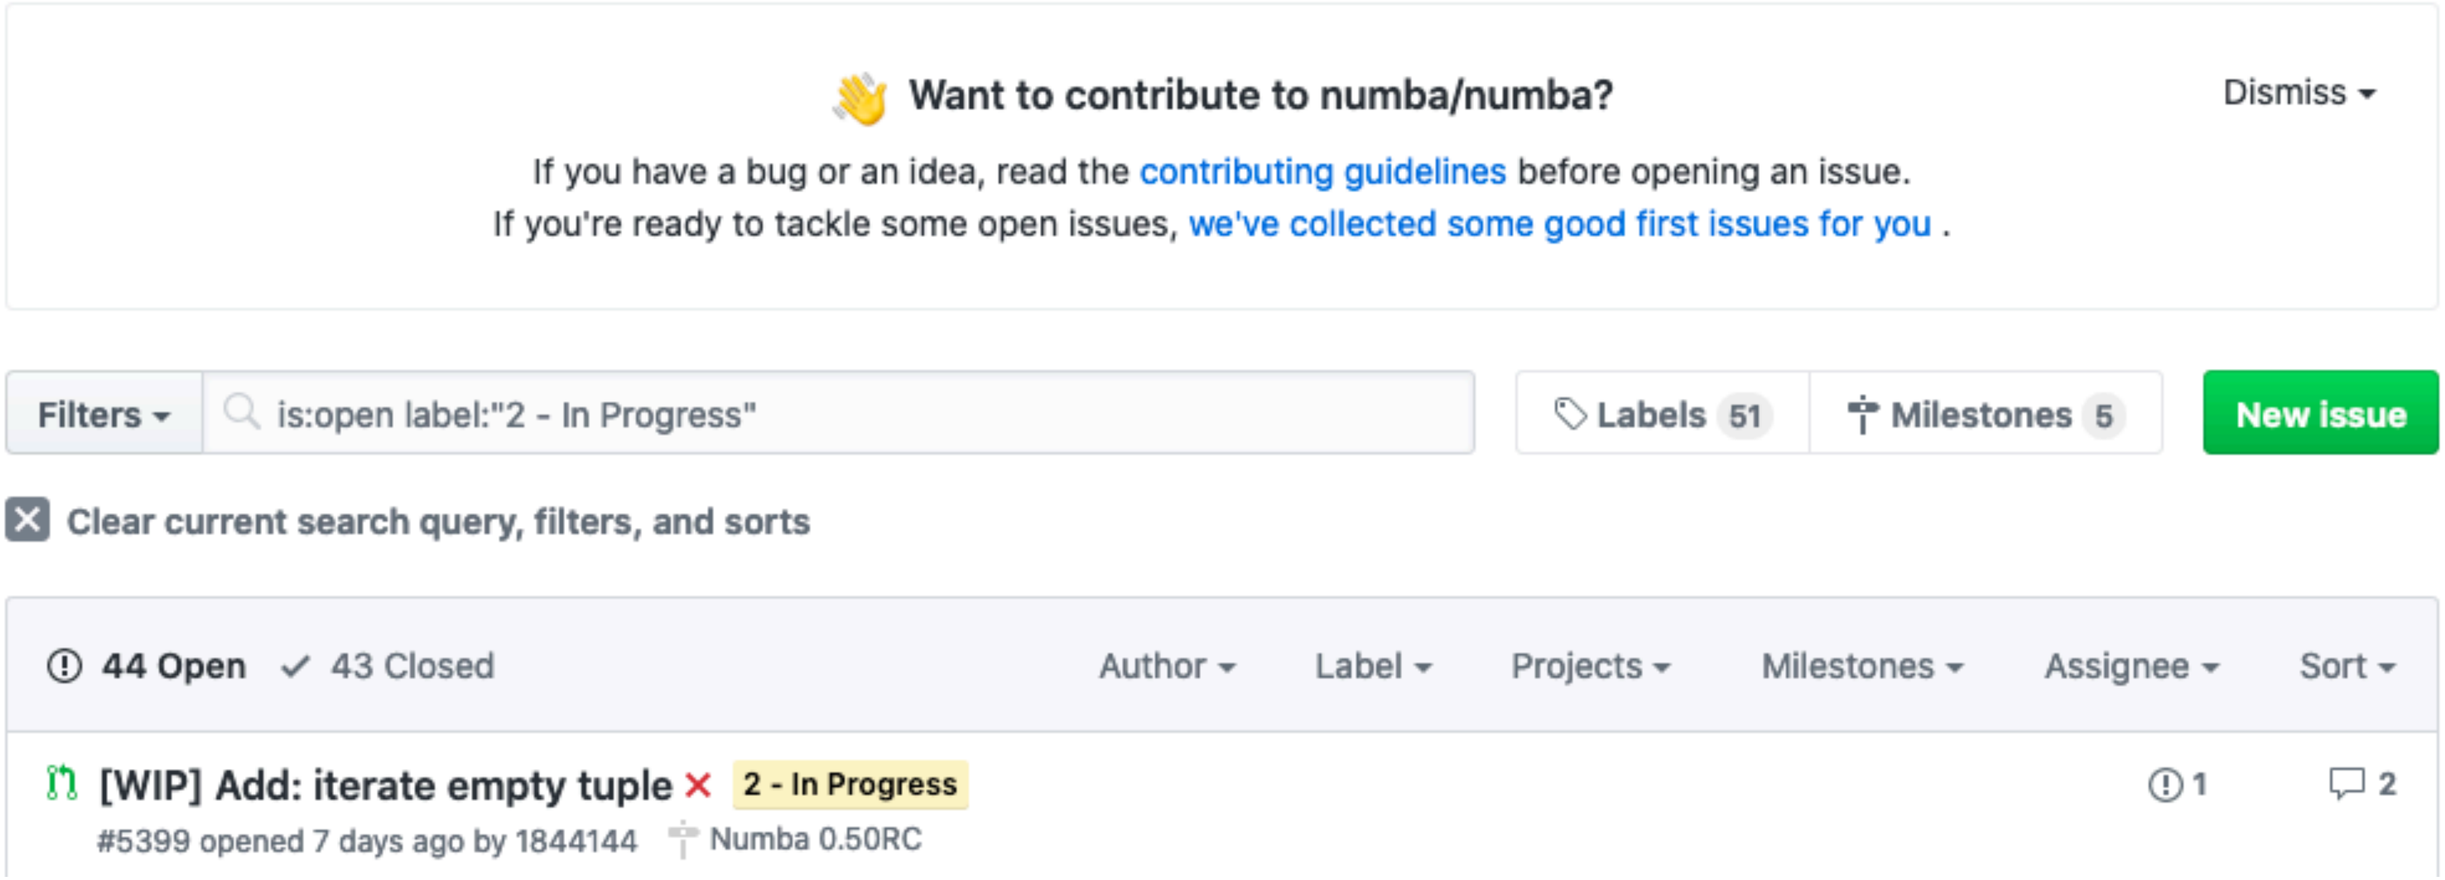


Issue Assignment

- Just like for PRs



Issue List



Want to contribute to numba/numba?
Dismiss
If you have a bug or an idea, read the contributing guidelines before opening an issue.
If you're ready to tackle some open issues, we've collected some good first issues for you .
Filters

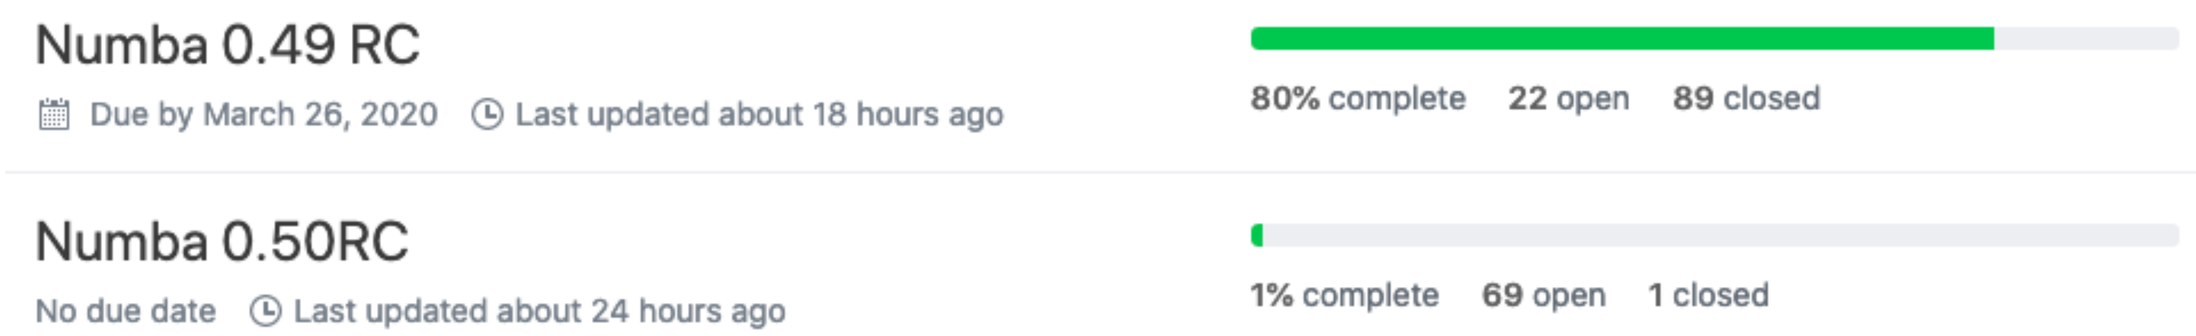
Advanced Filter

- Simple search box
- Advanced search features
  - Spans virtually all fields: milestone, assigned, author, created date, updated date, closed date...
  - Lots of logical connections: "links" (or doesn't); no assignee or label etc

Search only issues or pull requests
Search by the title, body, or comments
Search within a user's or organization's repositories
Search by open or closed state
Search by public or private repository
Search by author
Search by assignee
Search by mention
Search by team mention
Search by commenter
Search by a user that's involved in an issue or pull request
Search for linked issues and pull requests
Search by label
Search by milestone
Search by project board
Search by commit status
Search by commit SHA
Search by branch name
Search by language
Search by number of comments
Search by number of interactions
Search by number of reactions
Search for draft pull requests
Search by pull request review status and reviewer
Search by when an issue or pull request was created or last updated
Search by when an issue or pull request was closed

Milestones

- Similar to labels, plus stats
- We use those for PRs already



Project Management

Milestones, Again

- Similar to labels, plus stats
- We use those for PRs already

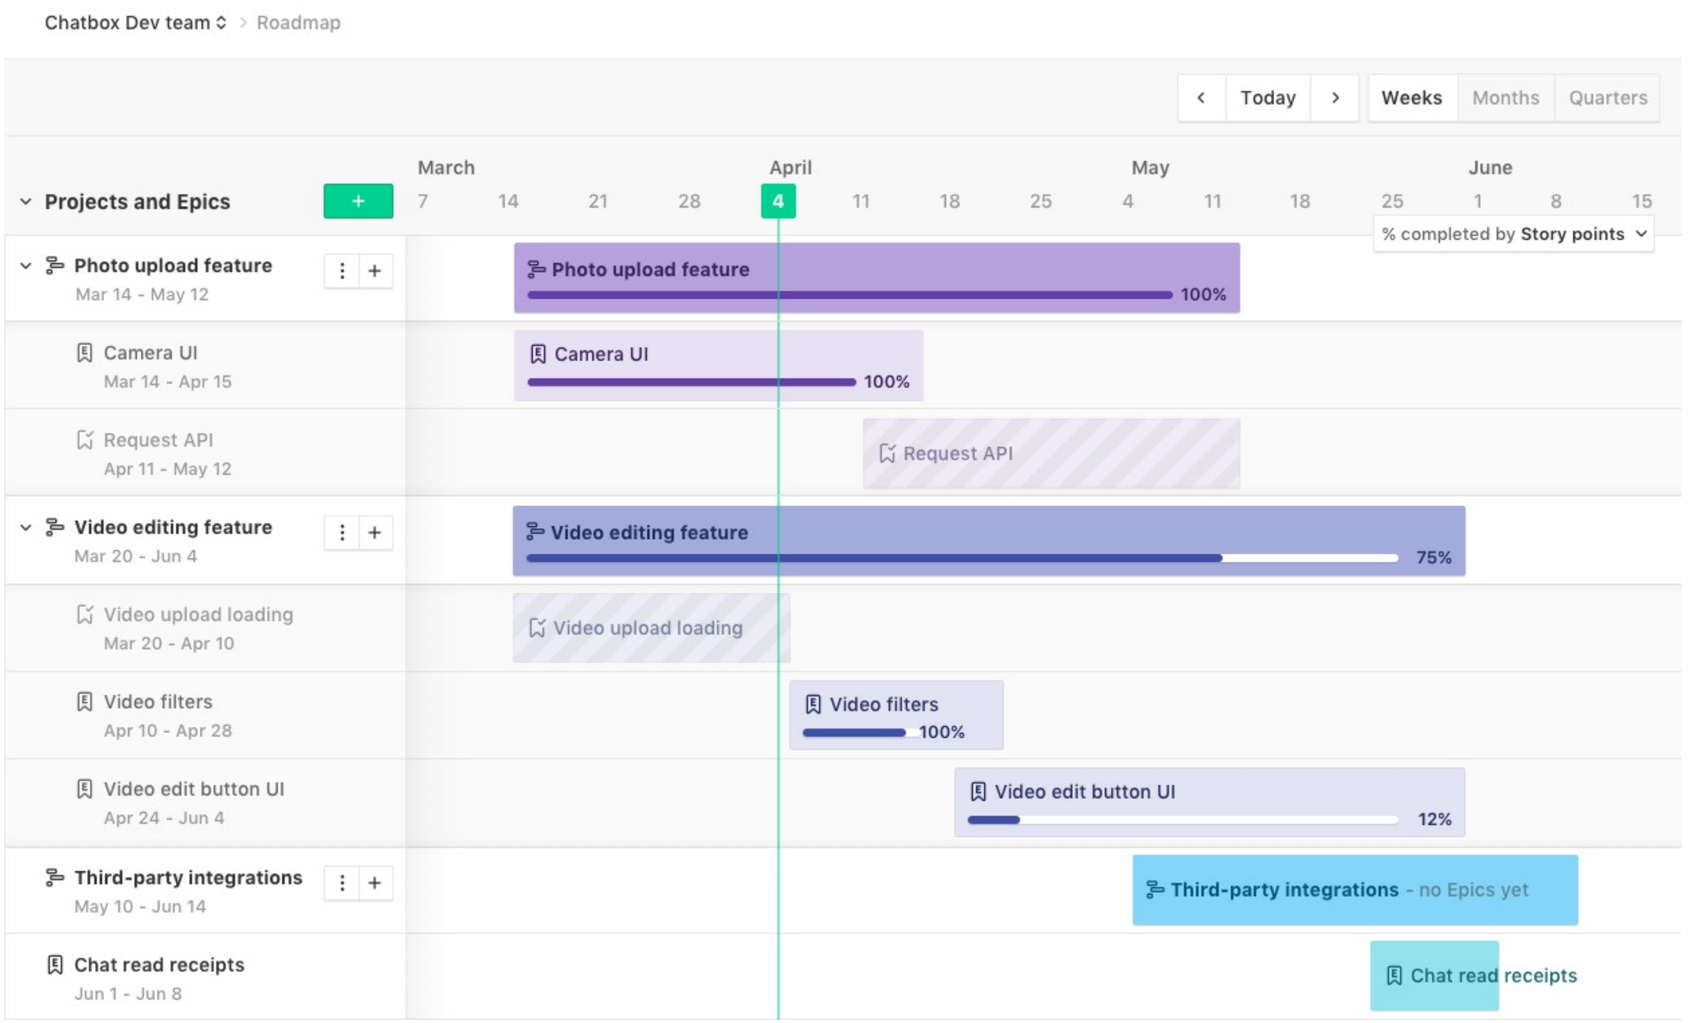
Project Management Apps

- Long list https://github.com/marketplace/category/project-management

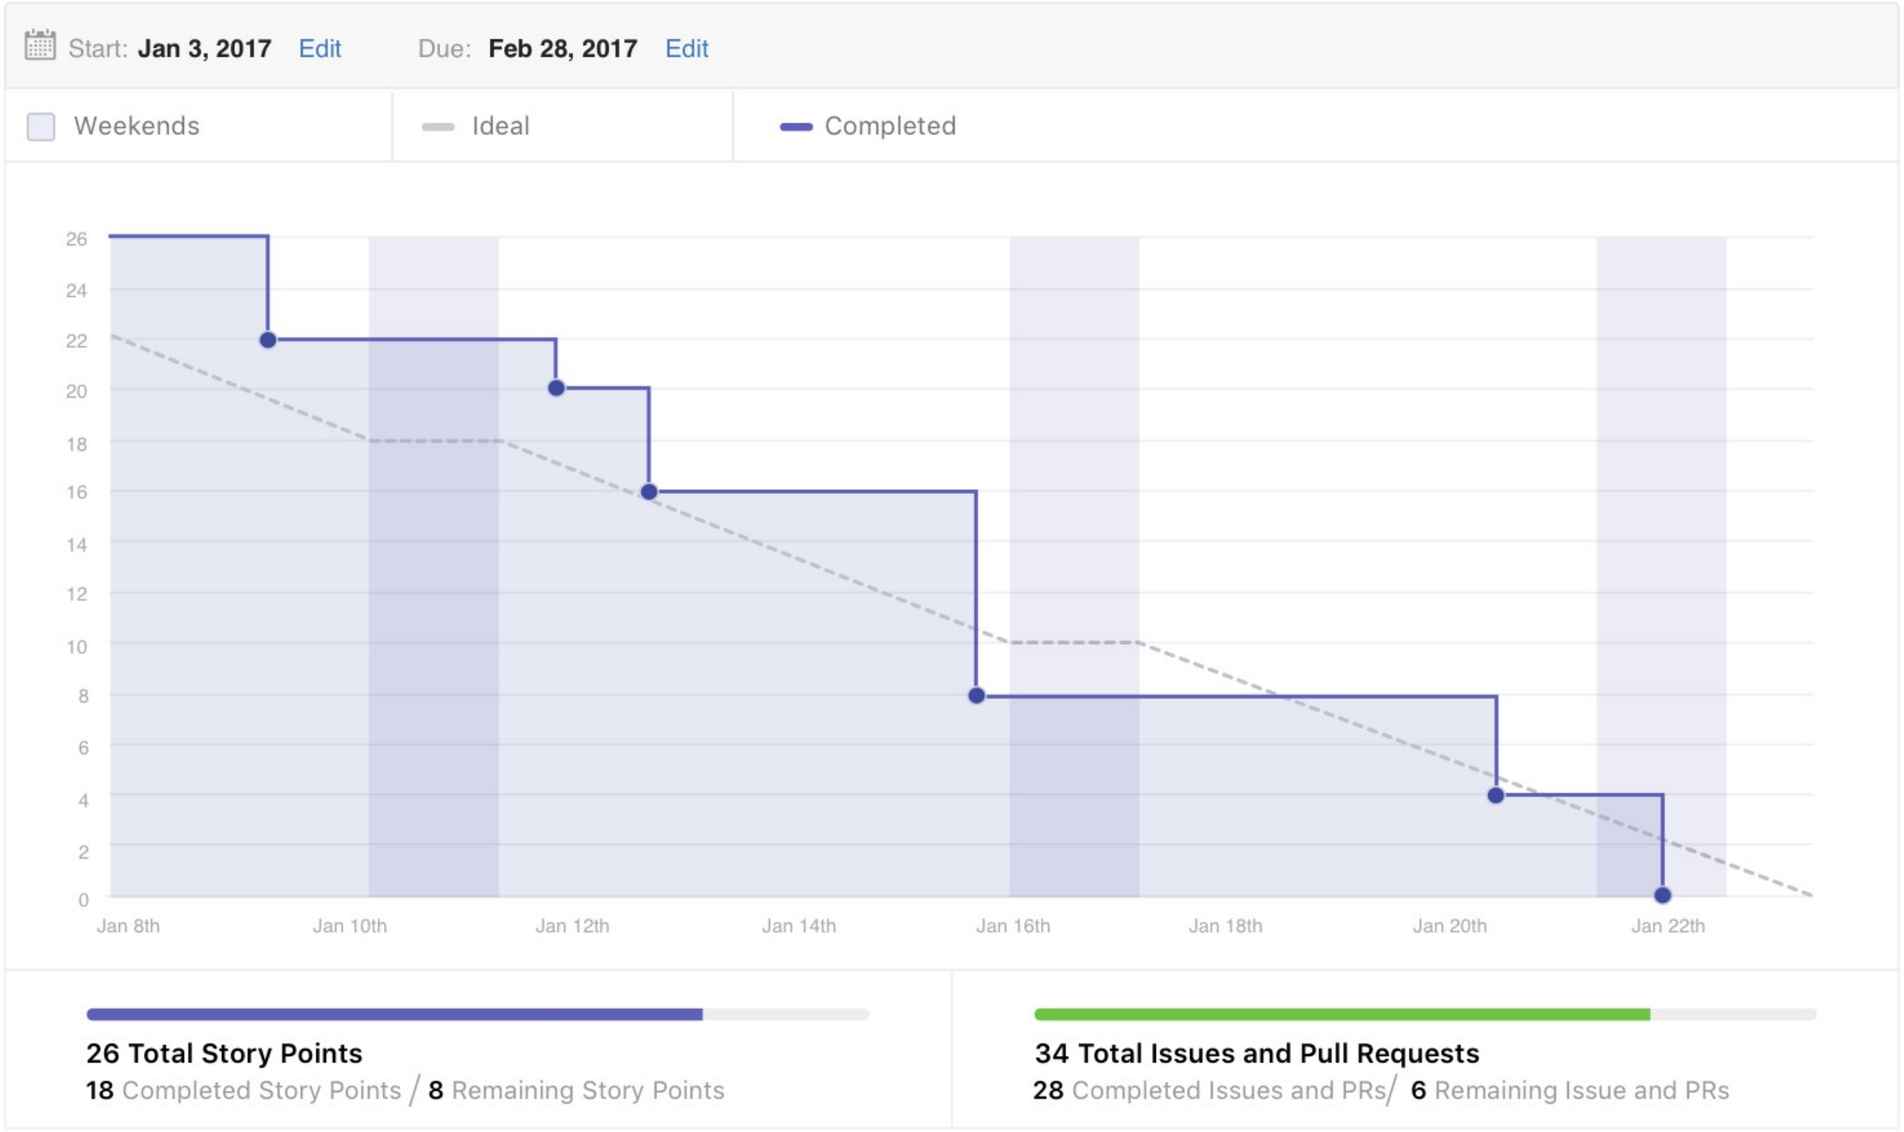
App Candidates

- All free for open projects like ROOT!
- Integrated project management: ZenHub
  - Roadmaps, agile epic + story + sprint + milestone, reporting
- Auto labeling (based on ML): Issue-Label Bot
- Notification management: Octobox

ZenHub Roadmap



ZenHub Reporting



Experiments

ALICE

- Jira
  - Used both Jira and Github but duplication was problematic
- Strong resistance to move away from Jira for "political" reasons
  - "private" bugs etc

LHCb

- Uses both Jira and Git**lab** Issues, IIUC:
  - Jira: project management
  - Gitlab Issues: code bugs; e.g. Gaudi @ Gitlab
- Concerned by transition: redirecting new bugs; follow-up on old ones

ATLAS

- Uses Jira
- Never considered moving away from it
- Sees no problems with ROOT moving to Jira
- Requests meaningful message on the then legacy Jira site, if we move

#28818 by smuzaffar was closed on Jan 29

[Do not merge] This is to test new cms-bot statuses per test ● code-checks-approved comparison-pending core-pending orp-pending pending-signatures requires-external tests-started — 4
#28787 by smuzaffar was closed on Jan 29 CMSSW_11_1_X

Add CMS_SA_ALLOW before try statements where catch (...) is used to skip static analyzer warning. ✓ code-checks-approved comparison-available core-approved fully-signed orp-approved tests-approved — 144
#28715 by gartung was merged on Jan 14 CMSSW_11_1_X

Utilities/StaticAnalyzers: Add CMS_SA_ALLOW exceptions on Static Analyzer checks involving Decls. ✓ code-checks-approved comparison-available core-approved fully-signed orp-approved requires-external tests-approved — 54
#28630 by gartung was merged on Dec 28, 2019 CMSSW_11_1_X

Conclusion

Yes / No

- Several benefits to migrate reports of new issues to Github
  - First and foremost: PR + code integration
- No objections from experiments
- Project management tools exist
  - If we move, would propose to start minimally (no ZenHub!) and build up as needed

Next steps

- Discuss with SFT projects
  - Based on this meeting and these slides
