Conclusion

HC: specific heat per ^{163}Ho -ion = 0.05 k_B at $T = 20 \text{ mK}$
→ $a = 10 \text{ Bq}$ is allowed

Modane: clean ^{163}Ho implantation is possible
new features need advanced theories
 Q matches with PENNING TRAP measurement

ECHo-1k Chip: more statistics give new input to theory
best achieved energy resolution with
 ^{163}Ho at that time
