The SIR in Mozambique

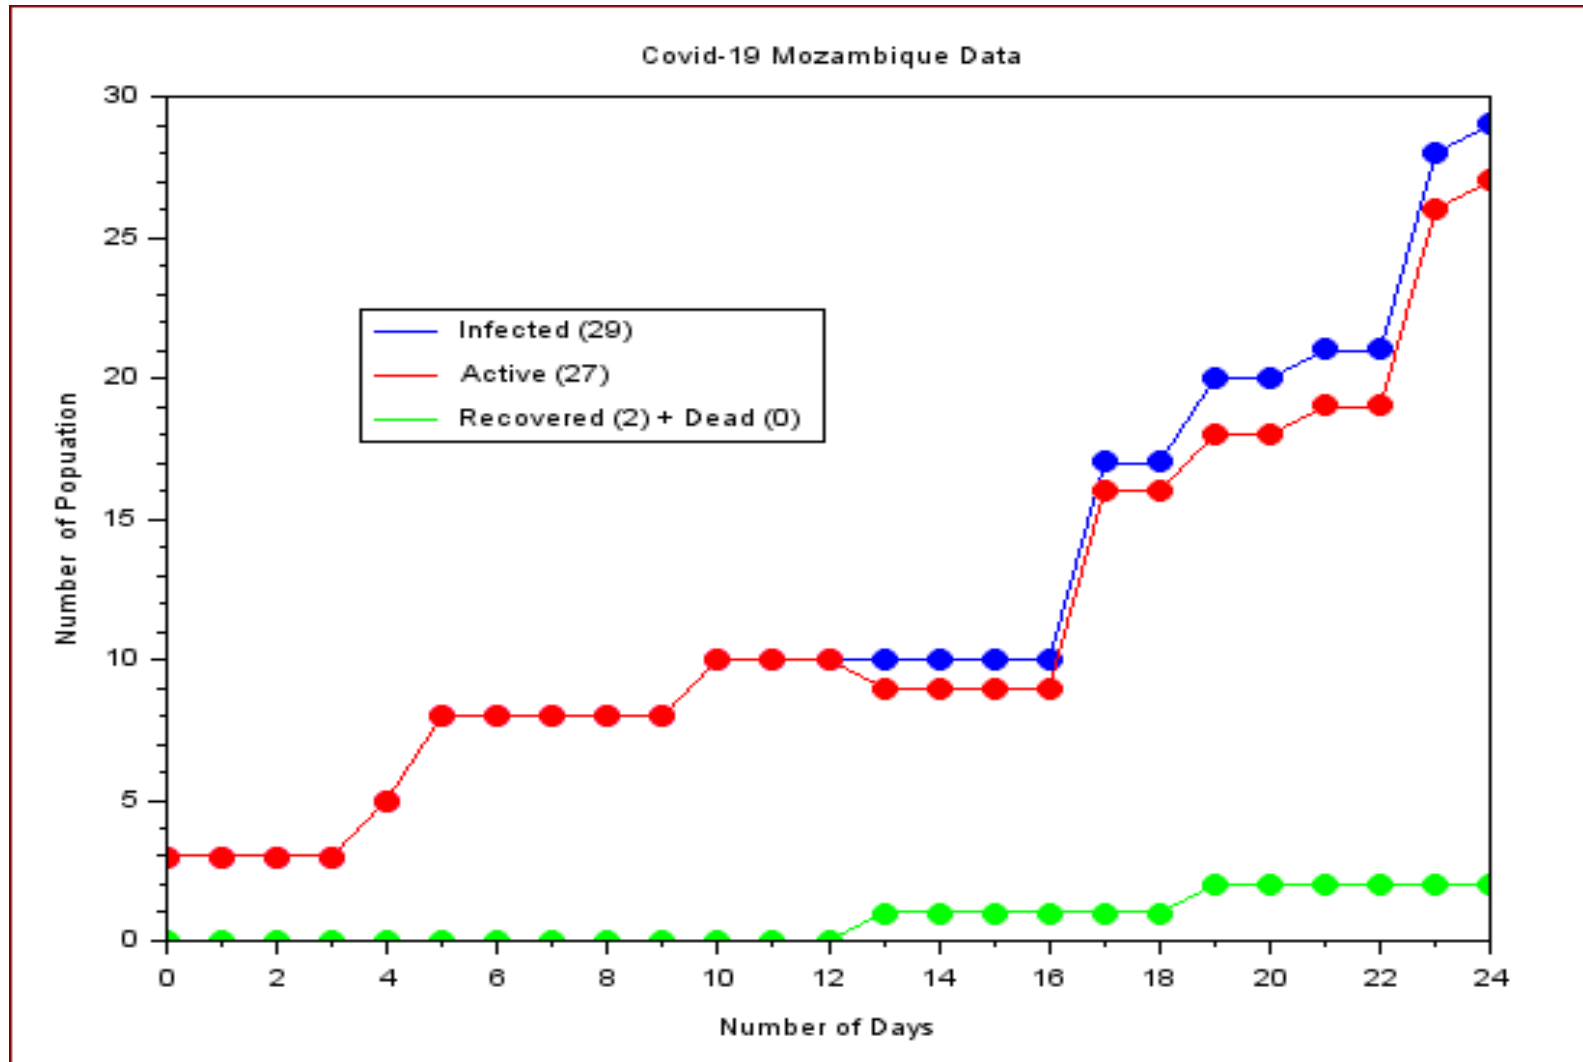

- *In Mozambique, we are 20 million s of population, so:*
- *Initial condition:*
- $N = S(0) = 2 * 10^7$
- $I(0) = 1$
- $R(0) = 0$

- $\frac{ds(t)}{dt} = -bs(t)i(t)$ $s(0) = 1$
- $\frac{dr(t)}{dt} = ki(t)$ $r(0) = 0$
- $\frac{di(t)}{dt} = bs(t)i(t) - ki(t)$ $i(0) = 5 * 10^{-8}$
- I solve the equations with method of **euler** with **scilab** code

Plotting of the solution system of equations
