

# News from Roma1

- Tomorrow Sofia is going to restart RM1 minidaq2;
- Since May the 4th:
  - it will be possible to go to lab (with suitable Protection Masks);
  - we can resume the nSB-nODE chain if needed;
  - If CERN crate comes back, we should decide where to install nECS prototype: do we move there? we still work in RM1? We ask for Central On-line Cluster?

- The nECS prototype should be installed somewhere for a “system” test.
- There are still crucial questions to decide:
  - How many projects?
  - Clara was proposing 3:
    - nODE
    - nFEE
    - nFSM
  - What do you think? It will make everything “lighter” but need some major modification that will need to be tested.
  - It’s crucial to have a reliable machine where to install and run the Integrated nECS

There will be 4 projects

[M23A, M45A, M23C, M45C]:

- 2 managing 1608 FEB;
- 2 managing 1152 FEB;

FEB	
M23A	1608
M45A	1152
M23C	1608
M45C	1152
	5520

- Current proposal
