

ELMB++

- presentation from Alessandro Marchioro (RadWG 9.7.09)
- ELMB -> Embedded Local Monitoring Board
- radiation tolerant device
- digital and analog I/O
- distribute timing, monitor and do certain control operations
- useful for the machine
 - solve/improve existing installations, future developments?
 - requirements: e.g., WordFip (currently only CAEN)
- meeting was held to see if a new development can/should be launched (organised by PH see [link](#))
