

ALICE

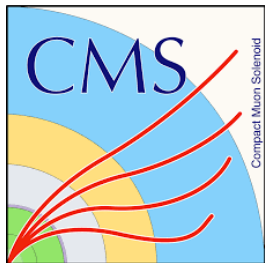

HONEXCOMB

(Heavy ion experimental combination)

RGdC, GM, IGB, AK

May 26th 2020

Some news

A lot of us busy with preparing (remote) conferences:

- LHCP this week, and Hard Probes next week

Postdoc hiring underway...

- CMS : still time to apply
 - <https://inspirehep.net/jobs/1779819>
- Others : stay tuned

Mailing list @ 100 people

- Invite your friends

First report was sent back to EU

- [\[link\]](#) from our wiki page too

Activities

1. Legacy and combination
 2. Common observables
 3. Known tensions?
 4. Need for summary plots?
- Lists to be summarized soon on wiki
 - Suggestions most welcome !

Today = nPDF

- From our first meeting:
 - Fact: nPDF makers already have tools to combine different measurements
 - Action: ask them if they want something from us?
 - Action: should first compare quantitatively the existing results, in particular the high statistics?
 - Possible: would we gain in combining the lower statistics signals, e.g. Z or W bosons in the forward region from LHCb and Alice?
