

# LHC-DMWG White paper: t-channel studies

Sukanya Sinha  
CDM Meeting: 28th May 2020

# Generic implementation of t-channel DM

Diagrams from Benjamin's [talk](#)

3 Main processes:

- ❖ DM pair production
- ❖ DM/mediator associated production (+ mediator decays into DM+jet)
- ❖ Mediator pair production (+ mediator decays into DM+jet)

Mediator pair-production has 3 separate contributions @NLO: t-channel and QCD contributions, LO interferences

# Present focus: S3D\_uR model restrictions

Name	DM	Mediators	Parameters
S3M_uni	$\tilde{\chi}$	$\varphi_{Q_f}, \varphi_{u_f}, \varphi_{d_f}$	
S3D_uni	$\chi$		
S3M_3rd	$\tilde{\chi}$	$\varphi_{Q_3}, \varphi_{u_3}, \varphi_{d_3}$	$M_\varphi, M_\chi, \lambda_\varphi$
S3D_3rd	$\chi$		
S3M_uR	$\tilde{\chi}$	$\varphi_{u_1}$	
S3D_uR	$\chi$		

uR models :

- 1 dark matter particle
- 1 mediator
- Coupling to the right-handed up-quark

$$\mathcal{L}_{\text{X.uR}}(X) = \left[ \lambda_\varphi \bar{X} u_1 \varphi_{u_1}^\dagger + \text{h.c.} \right]$$

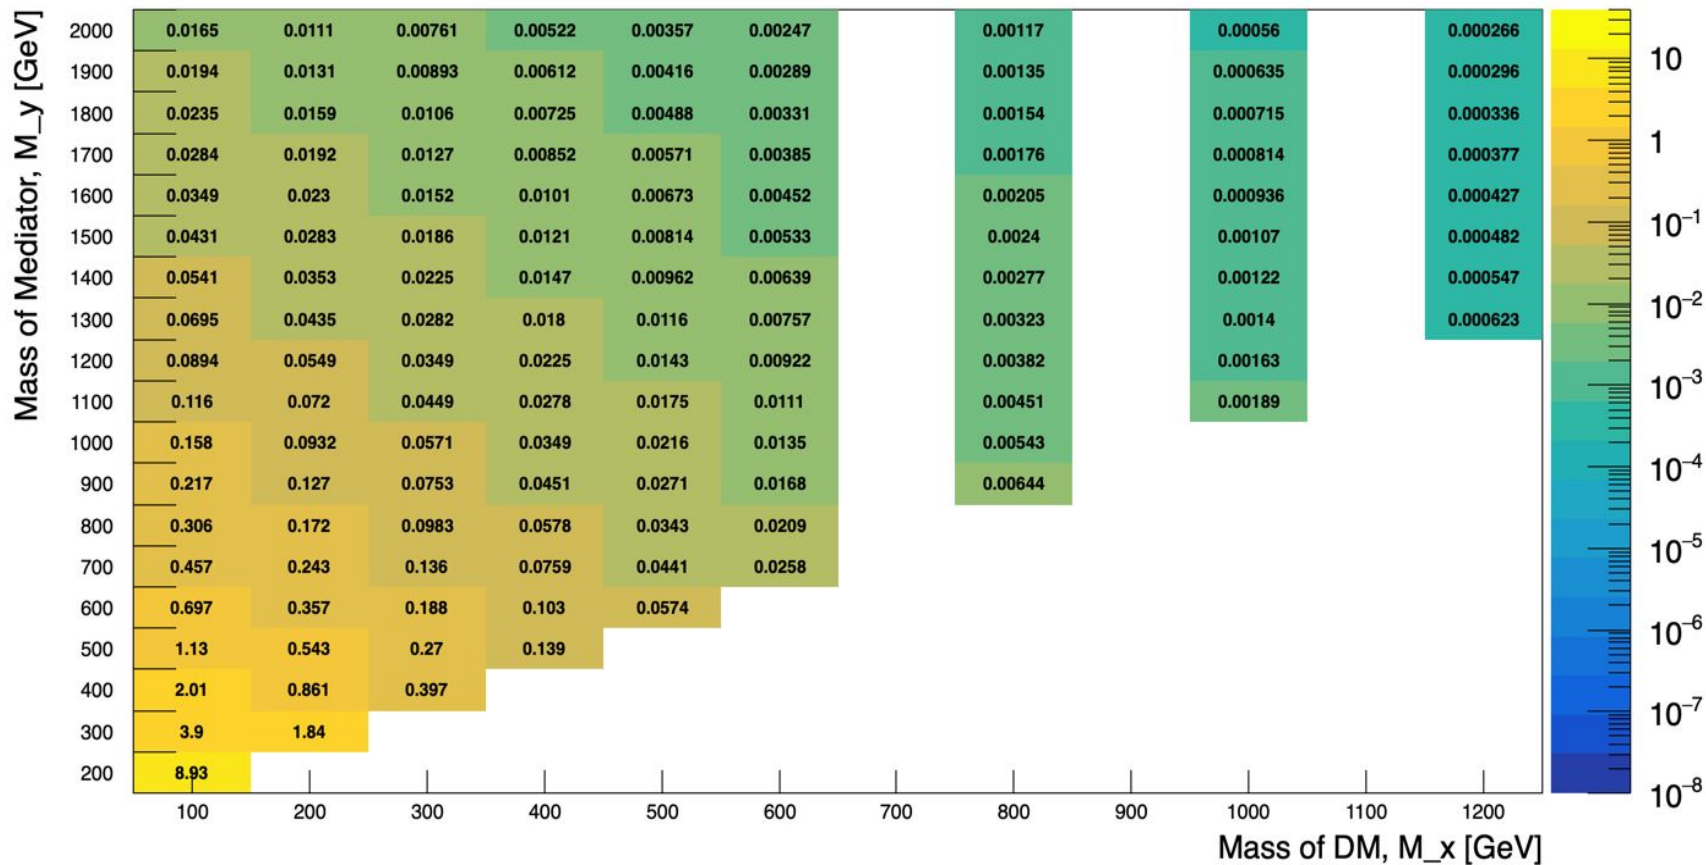

# LO Studies for S3D\_uR

As a preliminary study, focussed on cross-section scans with the conditions:

- **Lambda = 1,  $M_X < M_Y$ : Grid scan with**
  - $M_X = 200-600, 800, 1000, 1200$  GeV
  - $M_Y = 300 - 2000$  GeV
- **Processes considered:**
  - XX
  - XY
  - YY
    - t - channel contribution
    - QCD contribution

# XX@LO Cross-section scan

Cross-section scan XX@LO [pb]

# XY@LO Cross-section scan

Cross-section scan XY@LO [pb]

# YY@LO Cross-section scan

Cross-section scan YY@LO QCD contribution [pb]

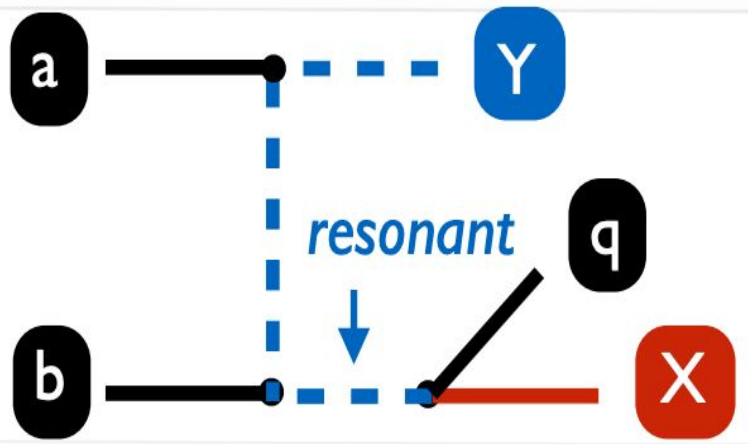

# YY@LO Cross-section scan

Cross-section scan YY@LO t-channel contribution [pb]

# NLO Studies of S3D\_uR

Overlap with

- YY @ LO with resonant  $Y \rightarrow Xq$  decay
- XY @ NLO (real emission)

Resonances must be carefully subtracted

LO interferences needed to be considered to scale the amplitudes

Cross-section scans with the conditions:

- $\Lambda = 1, M_X < M_Y$ : Grid scan with
  - $M_X = 100, 250, 500$  GeV
  - $M_Y = 500 - 2000$  GeV (in steps of 500 GeV)

Processes considered:

- XX
- XY
- YY
  - t - channel contribution
  - QCD contribution
  - LO interferences

# XX@NLO Cross-section scan

Cross-section scan XX@NLO [pb]

# XY@NLO Cross-section scan

Cross-section scan XY@NLO [pb]

# YY@NLO Cross-section scan

Cross-section scan YY@NLO QCD contribution [pb]

# YY@NLO Cross-section scan

Cross-section scan YY@NLO t-channel contribution [pb]

# YY@NLO Cross-section scan

Cross-section scan YY@NLO LO interferences [pb] (all negative values)

- Increasing the value of  $M_x$  decreases the cross section
- Tested over a vast range of masses

**Next Steps?**
