# CROWD4SDG

Citizen science for monitoring climate impacts and achieving climate resilience

# What it is

A funded EU project for research on, by, and for citizen science

Three year long project using design thinking methods in citizen science for achieving and monitoring sustainable development goals

The aims include proving that citizens need to and can play a role in monitoring and achieving SDGs, and creating tools so others can enable citizens as well

Three cycles of recruiting citizens, helping them develop their ideas, and letting the best ones present in notable events

# Why are we doing it

01

To get data on the impact citizen science can have

02

Create material to support citizen science

03

Create outputs to reach SDGs

# Why should we keep on doing it

It's one of the 80% initiatives

Can be linked to Attract through exploring ways of involving citizens or through projects

Linked to CBI-like student programs
