
(plans for a) workshop on backgrounds to VBF Higgs

- in CMS, the Higgs VBF WG is working with the FWD Physics one to investigate VBF-like topologies
- cross-section of central-fwd jets topology and energy flow in the central region are an example of common topics
- we would like to concentrate on the measurement of bkg to VBF in a (~ 1 day) workshop across experiments, and with theory and phenomenology
- foreseen for fall 2010 / beginning 2011, in collaboration with LPCC, at CERN (or another easily reachable location)
- we're compiling the detailed list of arguments right now
- let us know if you wish to participate!
