

# Novel acquisition systems and smart FPGA programmability

---

FERDINANDO GIORDANO (CAEN) –  
2020 ISOLDE WORKSHOP AND USER MEETING

# Summary

---

## New hardware developments:

- R5560
- VX2740

## Open FPGA concept and SciCompiler

## CoMPASS, a comprehensive acquisition control software

## -- A talk about flexibility

# New hardware

---

CAEN **always drives to develop** new hardware and to improve its products with new firmware and software tools.

During the last years, a major project was pursued that is going to influence the years ahead: the **new digitizers**.

The new digitizers have better performance across the board:

- more channels for denser systems,
- faster communication links,
- from MB to GB on-board memory,
- improved FPGA with embedded ARM and OpenFPGA.

# X5560 family (rack and desktop)

- 128 channels, 14-bit @125 MS/s Digitizer
- Rackmount with differential (CAT5e) or single-ended (MCX) inputs
- Based on powerful Xilinx Zynq-7000 SoC with open FPGA
- **SCI-Compiler for easy FPGA programming**
- Fully customizable data processing firmware , middleware and software
- Readout of large arrays of detector : specifically for position-sensitive 3He tubes.
- Maximum flexibility: **USB3.0, Ethernet**, and Optical Link connectivity
- **COMING SOON**  
Desktop version - 32-channels single-ended

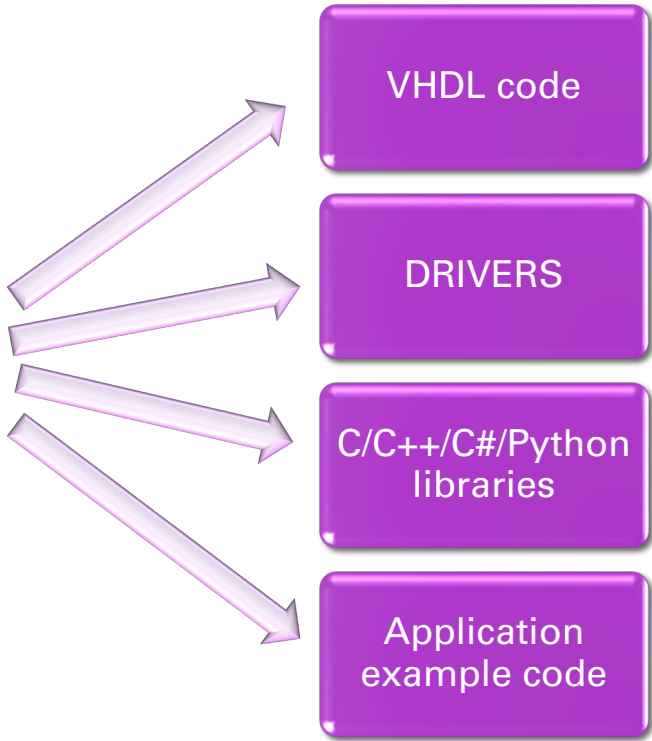

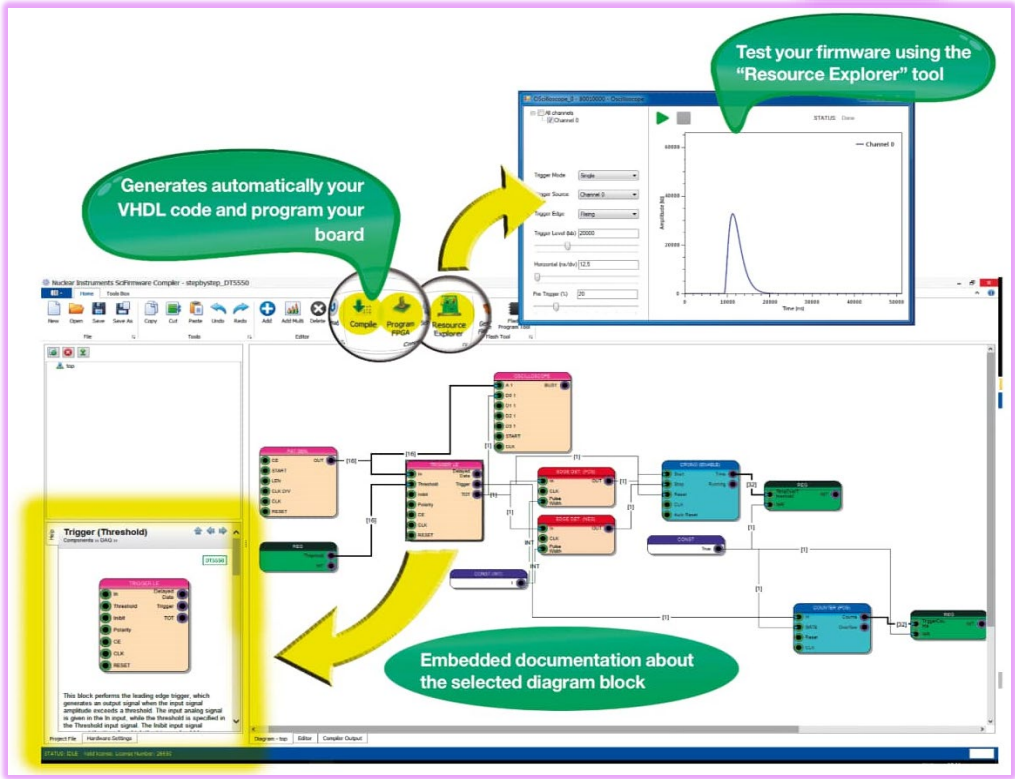

# SCI-Compiler: the concept

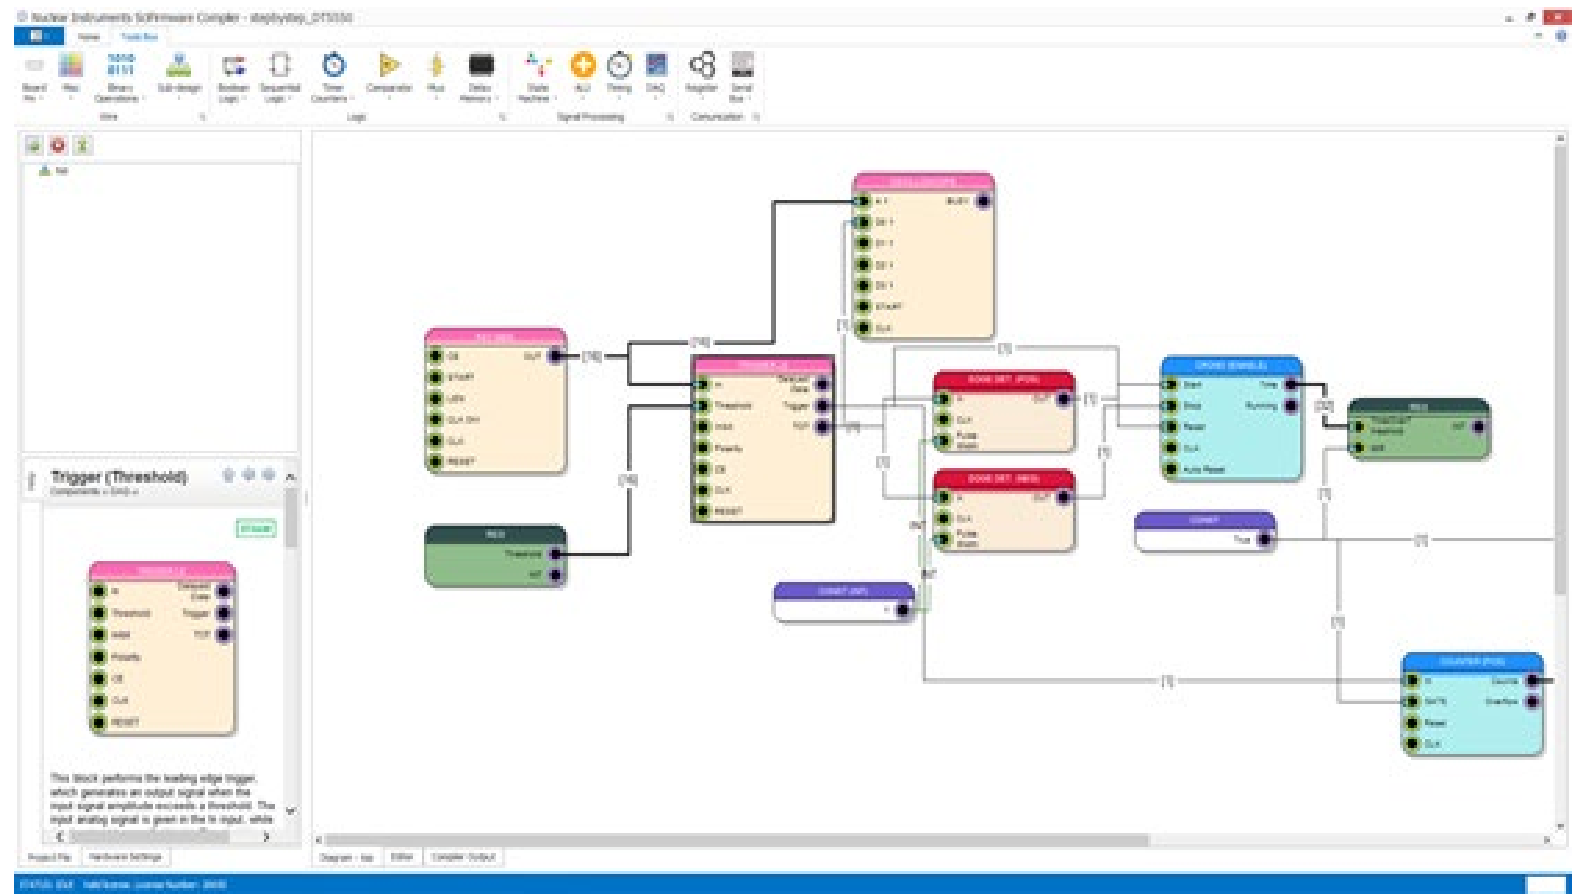

Blocks implementing advanced signal processing (Trapezoidal filter, Oscilloscope, TDC, MCA, ...)

1-year free upgrade license included with CAEN x5560, x5550 families

# A practical example for neutron detection

# Neutron detection: research and security

- **Loki @ ESS/RAL-ISIS:** 3He tubes readout by 30x R5560 synchronized and interfaced with pre-existing systems
- **IRSN** – France: 32 channels readout system for 8 position sensitive 3He tubes – 32 ch preamp R1443 , 16 ch R8033 HV and 32 ch R5560

Thermal neutron position (top) and spectrum (bottom)  
reconstructions acquired with a 3He tube and R5560

# VX2740: the first of a kind

## 64 channel, 125 MS/s, 16 - bit waveform digitizer

High channel density spectroscopy

Good fit for Neutrino and Dark Matter experiment

**Open FPGA:** SCI-Compiler tool for beginners or advanced firmware template

Four 40-pin, 2 mm header connectors with DIFF or SE inputs

**1 GbE, 10 GbE, USB 3.0** and CONET 2.0 (optional) connectivity

Common Trigger (waveforms) or Individual Self-trigger modes

**DPP options:** PHA (soon available), QDC, PSD, CFD

Advanced Waveform Readout modes: ZLE, DAW

DT2740, 64 channels in Desktop form factor (COMING SOON)

Model	# channels	MS/s	# bit	Applications
<b>x2740</b>	64	125	16	64 MCAs for high channel density spectroscopy Good fit for Neutrino and Dark Matter exp. (candidate for Dark Side)
<b>x2745</b> Advanced version of x2740	64	125	16	Variable gain input stage Designed for Si detectors readout
<b>x2725/x2730</b>	32	250/500	14	Medium-fast detectors Sub-ns timing combined with high energy resolution Optimal trade off between cost and performances
<b>x2751</b>	16	1000	14	Ultra-fast detectors (diamond, MPCs, SiPMs) with ps timing applications Potential upgrade to 2.5 GS/s
<b>x2724</b>	32	125	16	Spectroscopy & MCA Advanced Front-End (gain, shaping, AC/DC coupling ...) Semiconductor detector (HPGe, Clover, SDD ,...) Typically connected to charge Sensitive Preamplifier

# Birdseye view – what's coming

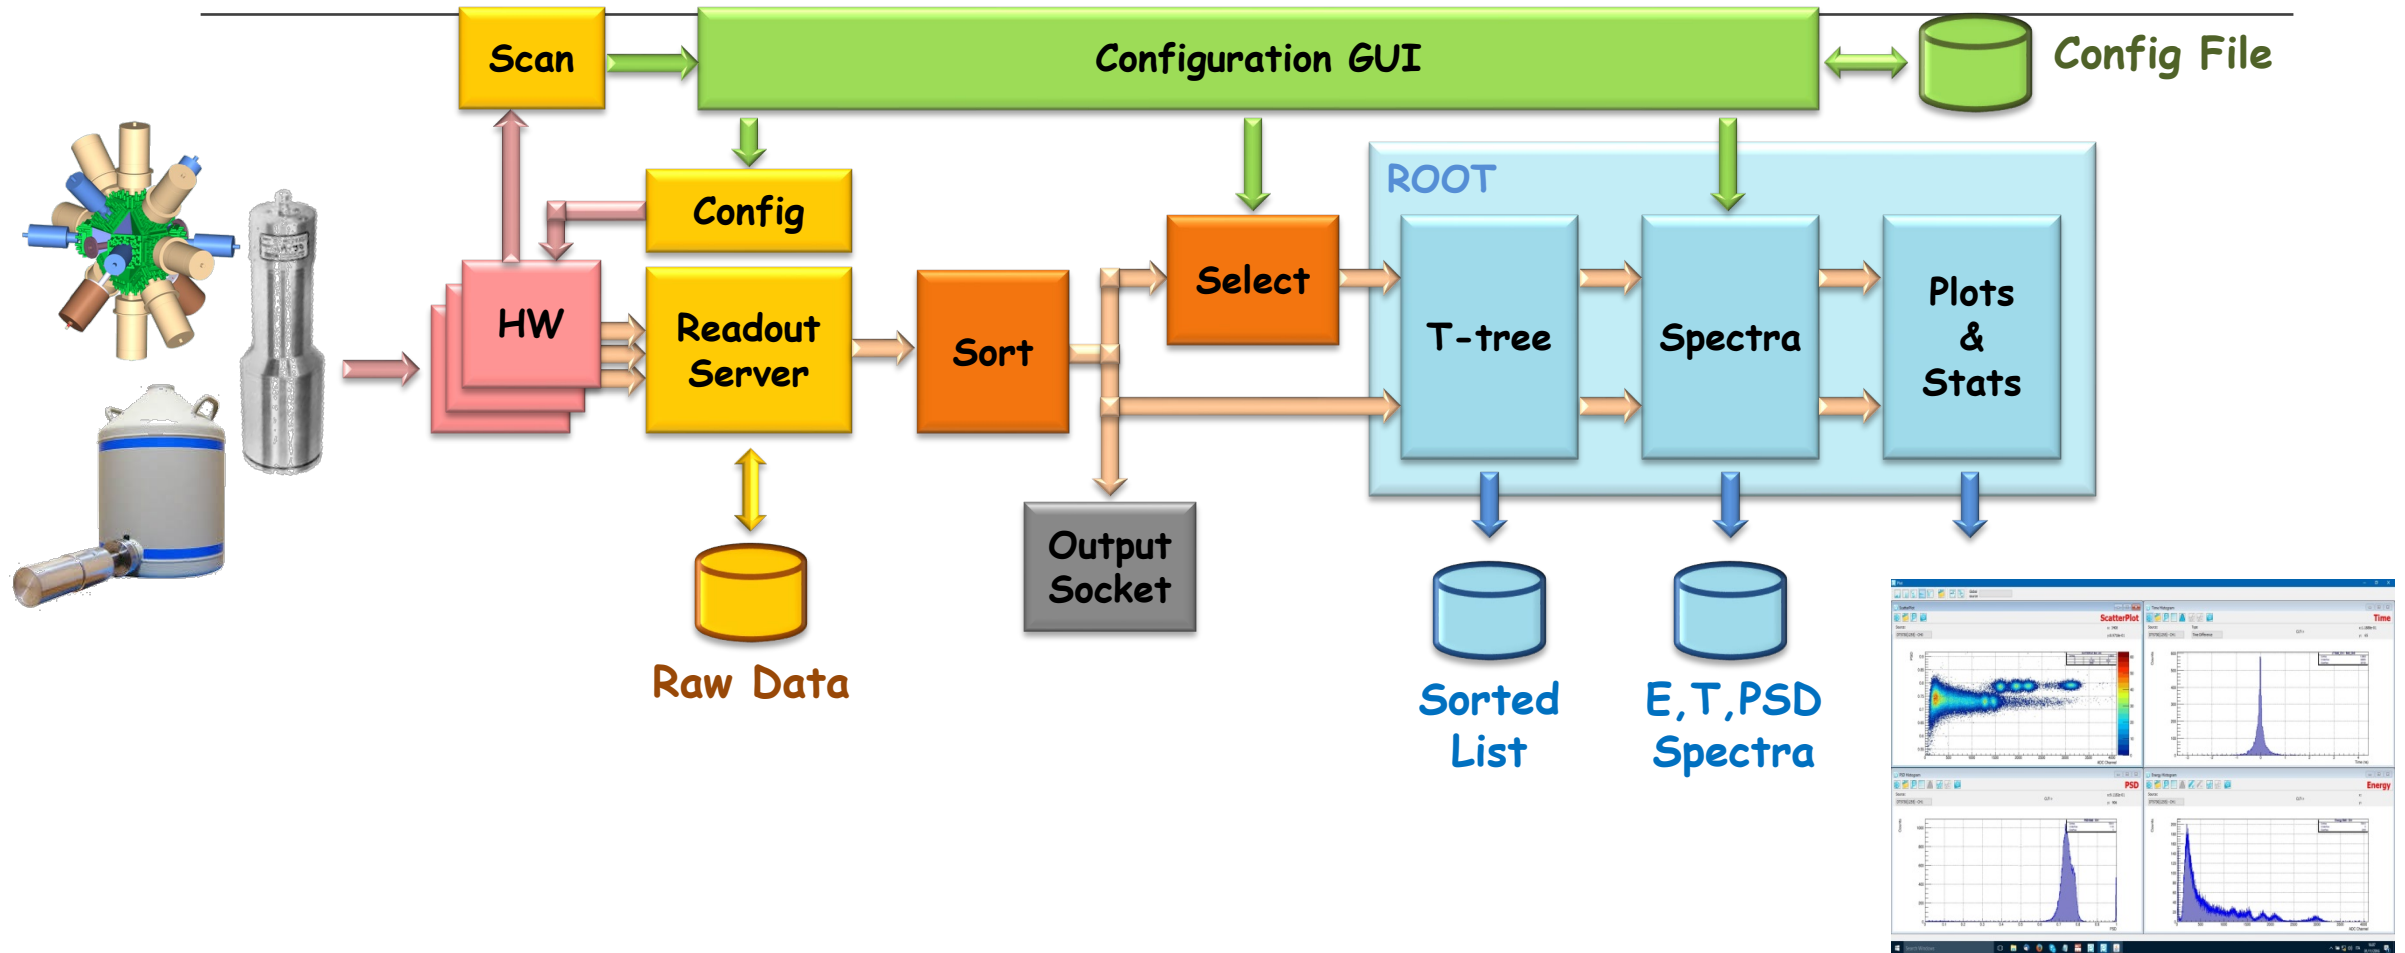

# CoMPASS

- Support to all the **CAEN Digitizer** running **DPP FW** and MCAs (except Hexagon)
- **Multi-board management**
- **Synchronization** of multiple boards of different type
- Time Correlation between different channels
- Simultaneous plot of waveform, energy, time, PSD, and TOF spectra
- Energy calibration
- Digital Constant Fraction Discrimination for fine time stamp interpolation
- Selectable filters on energy and PSD
- Several options for **data saving**, including **ROOT**, **.csv**, **.bin**, **.n42**, etc.
