

After the first quarkonium data at $\sqrt{s} = 7$ TeV:
where do we stand ?

J.P. Lansberg
Paris Sud XI - IPNO

First Retequarkonii Workshop
October 25th-28th 2010
Nantes France

Outline

What we understand:

- 1 why QCD corrections do matter at mid- and high- P_T

What we seem to understand:

- 2 The CSM predictions account correctly for the yield
- 3 Colour Octet Dominance is challenged at low/mid P_T in pp
- 4 QCD corrections do matter for the polarisation

What we do not understand:

- 5 ψ production at very large P_T
- 6 Other features not understood

What we already have from the LHC

- 7 LHC data which are public so far
- 8 Polarisation impact on acceptance
- 9 First comparisons of theory with LHC data

Part I

What we understand

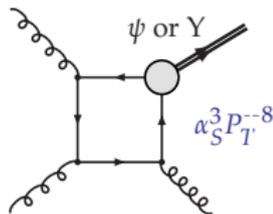

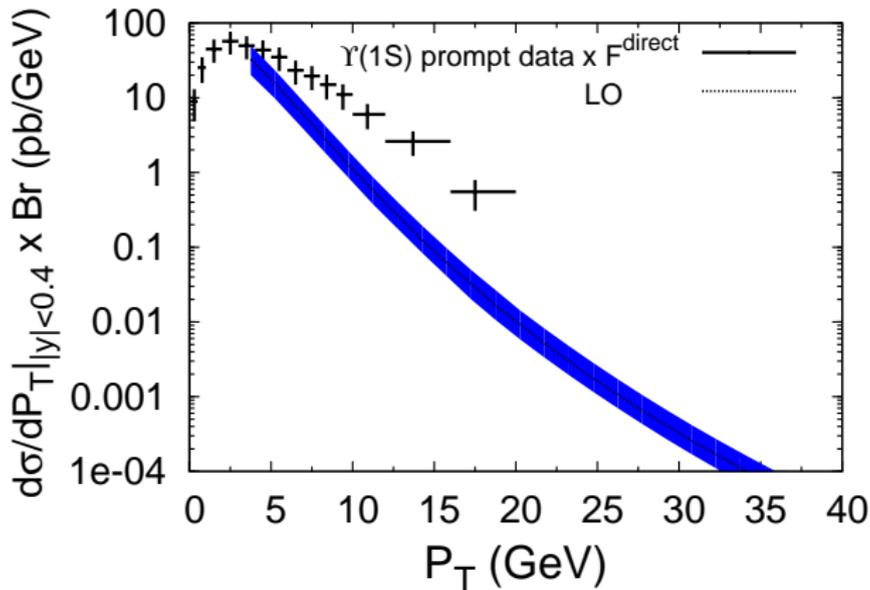

QCD corrections for Υ at the Tevatron

QCD corrections for Υ at the Tevatron

J.Campbell, F. Maltoni, F. Tramontano, Phys.Rev.Lett. 98:252002,2007

P.Artoisenet, J.P.L, F.Maltoni, PLB 653:60,2007

P.Artoisenet, J.Campbell, JPL, F.Maltoni, F. Tramontano, Phys. Rev. Lett. 101, 152001 (2008)

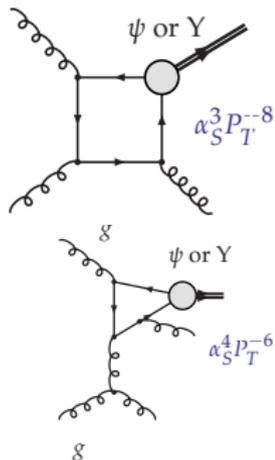

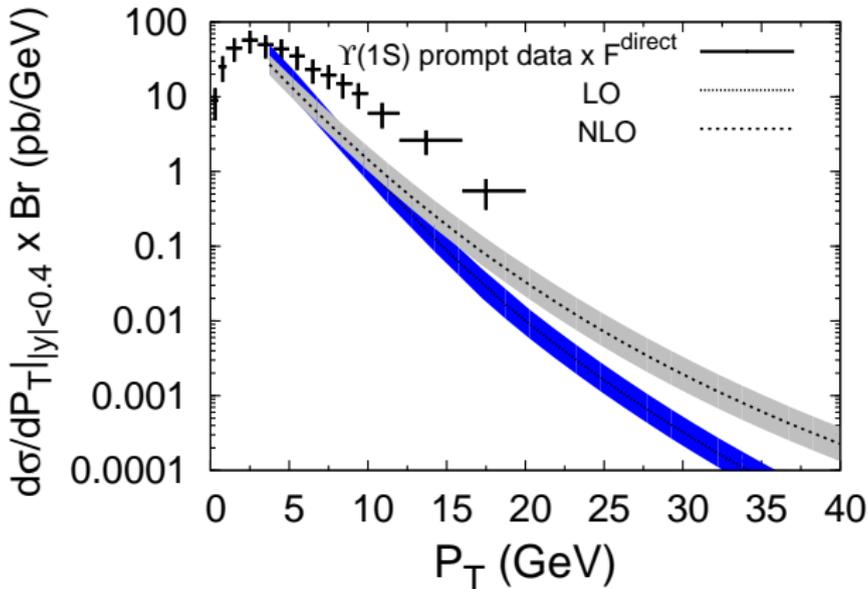

QCD corrections for Υ at the Tevatron

J.Campbell, F. Maltoni, F. Tramontano, Phys.Rev.Lett. 98:252002,2007

P.Artoisenet, J.P.L, F.Maltoni, PLB 653:60,2007

P.Artoisenet, J.Campbell, JPL, F.Maltoni, F. Tramontano, Phys. Rev. Lett. 101, 152001 (2008)

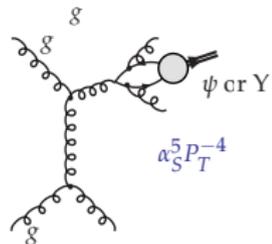

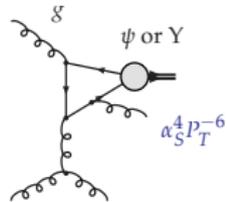

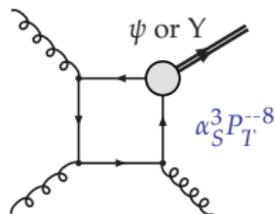

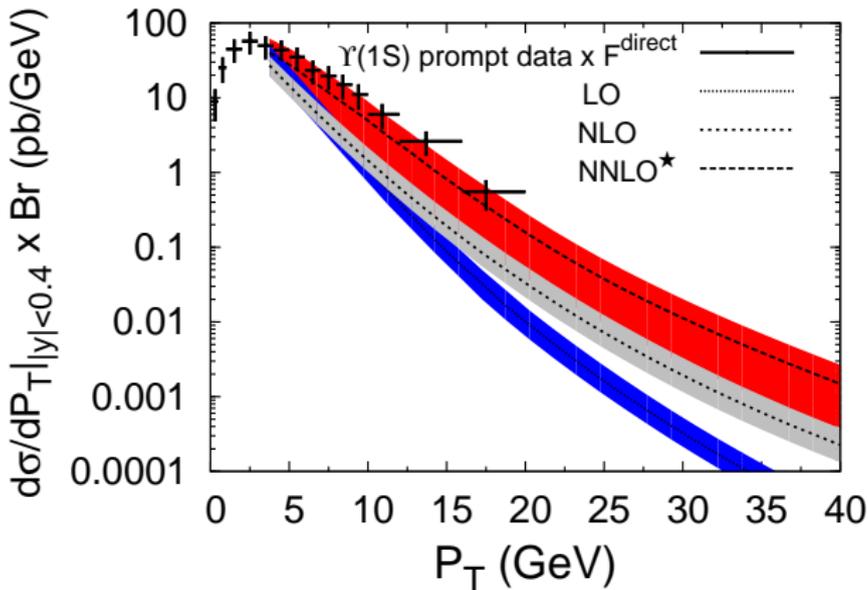

QCD corrections for Υ at the Tevatron

J.Campbell, F. Maltoni, F. Tramontano, Phys.Rev.Lett. 98:252002,2007

P.Artoisenet, J.P.L. F.Maltoni, PLB 653:60,2007

P.Artoisenet, J.Campbell, JPL, F.Maltoni, F. Tramontano, Phys. Rev. Lett. 101, 152001 (2008)

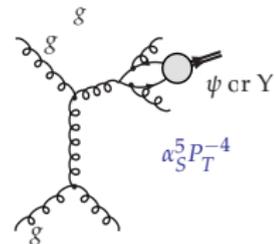

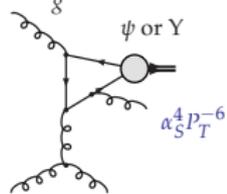

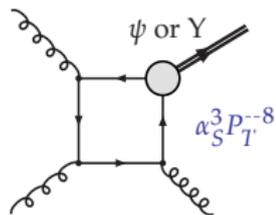

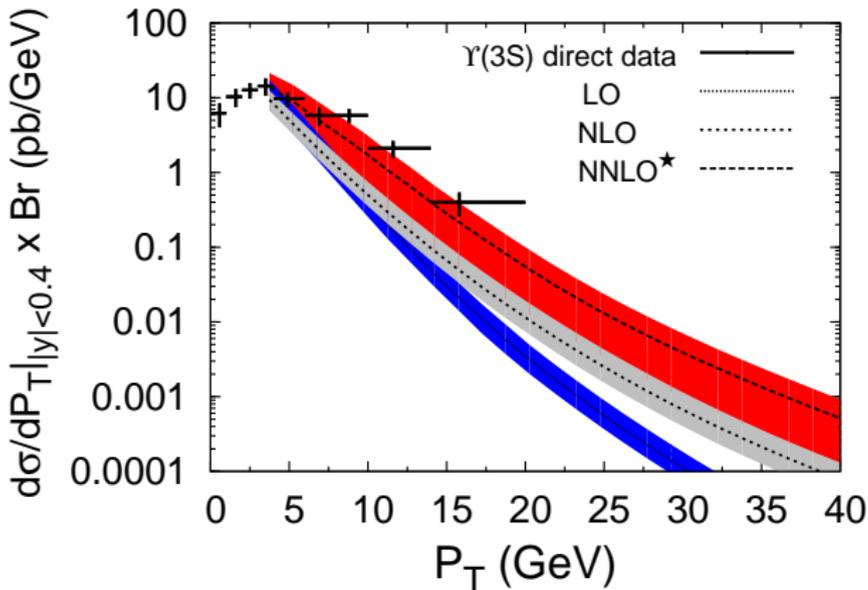

Yet, the impact of double t -channel gluon exchange at α_S^5 is unsure

QCD corrections for Υ at the Tevatron

J.Campbell, F. Maltoni, F. Tramontano, Phys.Rev.Lett. 98:252002,2007

P.Artoisenet, J.P.L. F.Maltoni, PLB 653:60,2007

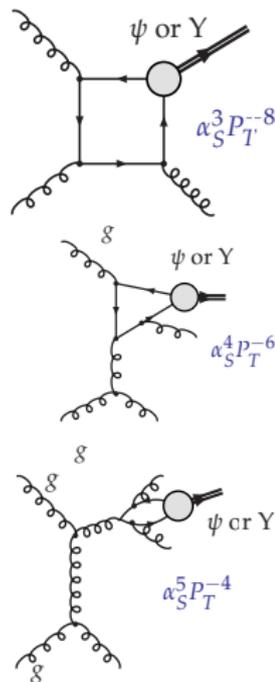

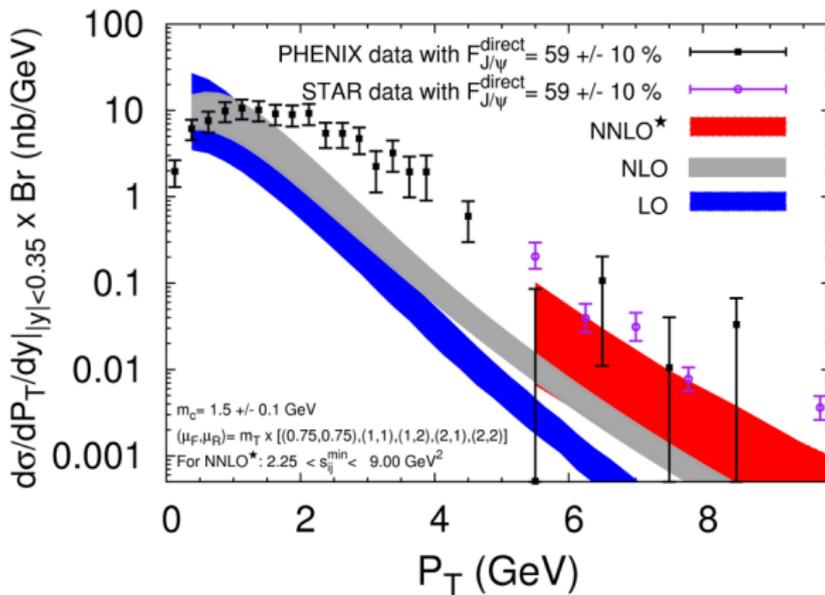

P.Artoisenet, J.Campbell, JPL, F.Maltoni, F. Tramontano, Phys. Rev. Lett. 101, 152001 (2008)

Yet, the impact of double t -channel gluon exchange at α_S^5 is unsure

QCD corrections for J/ψ at RHIC

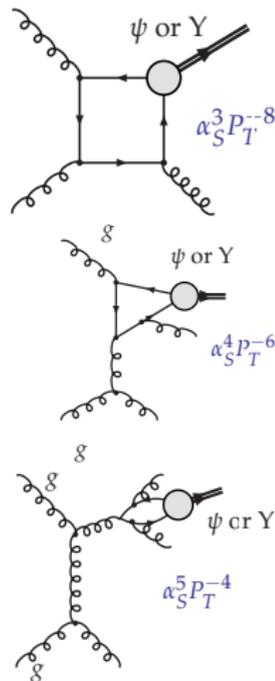

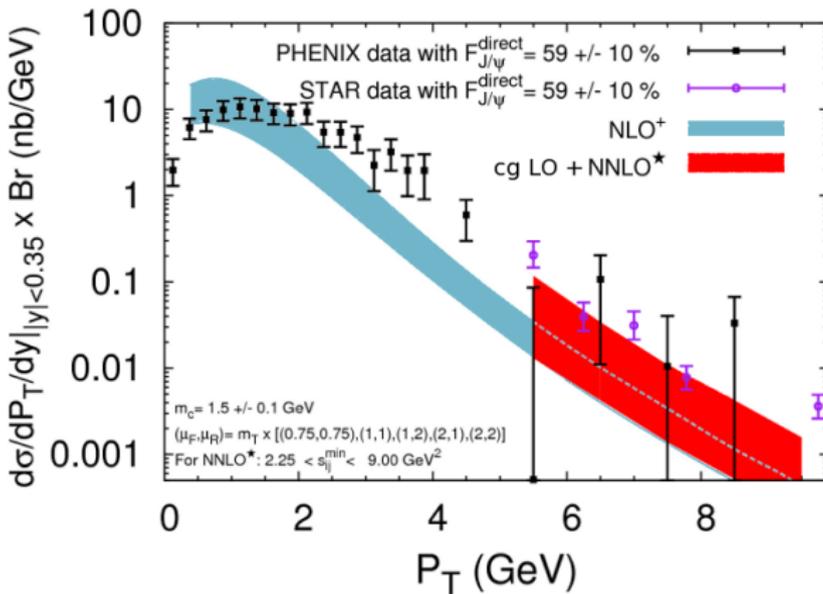

JPL, arXiv:1003.4319 [hep-ph]

Impact of t -channel gluon exchange at α_S^5 unsure

QCD corrections for J/ψ at RHIC

JPL, arXiv:1003.4319 [hep-ph]

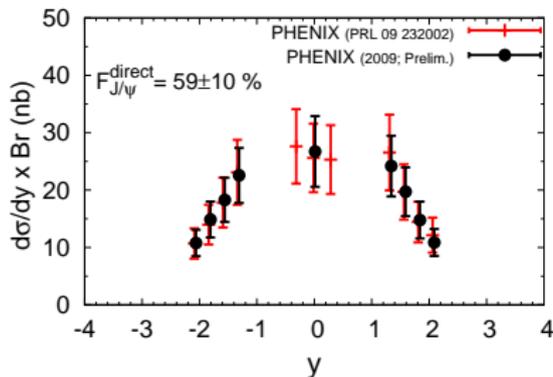

Impact of t -channel gluon exchange at α_S^5 unsure

Part II

What we seem to understand

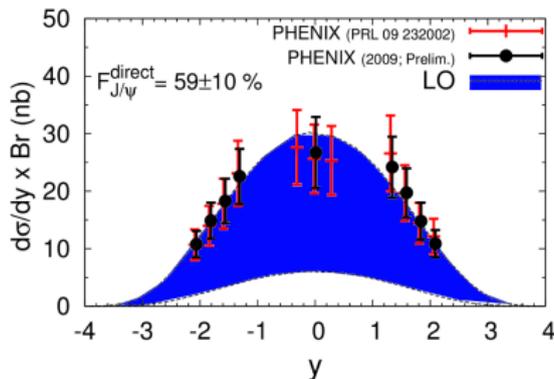

the CSM predictions account correctly for the yield ($\frac{d\sigma}{dy}$)

S. J. Brodsky and JPL, PRD 81 051502 (R), 2010

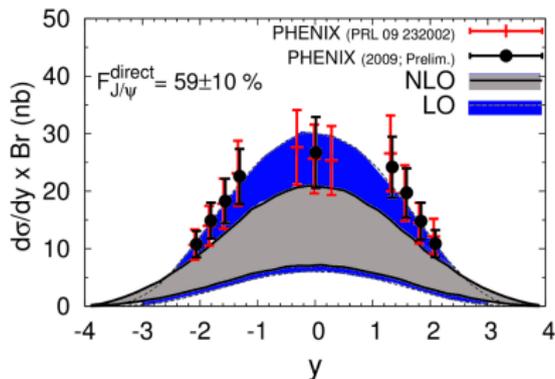

the CSM predictions account correctly for the yield ($\frac{d\sigma}{dy}$)

S. J. Brodsky and JPL, PRD 81 051502 (R), 2010

LO: $gg \rightarrow J/\psi g$ (nothing new !, back to 1981 !)

the CSM predictions account correctly for the yield ($\frac{d\sigma}{dy}$)

S. J. Brodsky and JPL, PRD 81 051502 (R), 2010

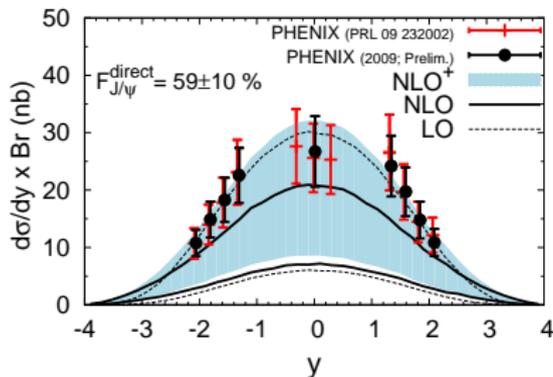

NLO: $gg \rightarrow J/\psi$, $gq \rightarrow J/\psi gq$, ...

using the matrix elements from J.Campbell, F. Maltoni, F. Tramontano, PRL 98:252002,2007

the CSM predictions account correctly for the yield ($\frac{d\sigma}{dy}$)

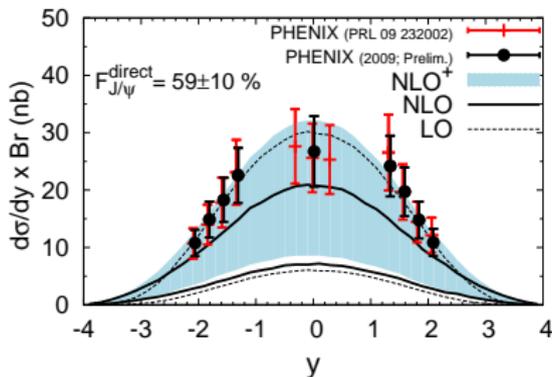

S. J. Brodsky and JPL, PRD 81 051502 (R), 2010

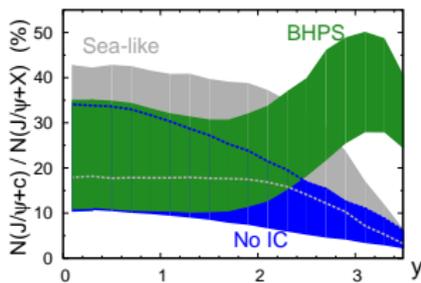

NLO⁺: adding one **new LO contribution** $cg \rightarrow J/\psi c$

the CSM predictions account correctly for the yield ($\frac{d\sigma}{dy}$)

S. J. Brodsky and JPL, PRD 81 051502 (R), 2010

NLO⁺: adding one new LO contribution $cg \rightarrow J/\psi c$

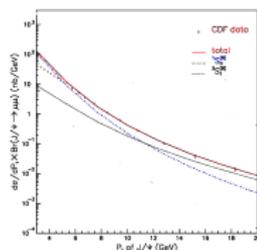

Could be studied via azimuthal correlation

$J/\psi + e, \mu$; 10-40% of the direct signal

the Colour Octet Dominance challenged at low/mid P_T in pp ?

- **Constraints from the P_T dependence in pp**

- Computation at NLO for CO channel: CO predictions overshoot data at low P_T

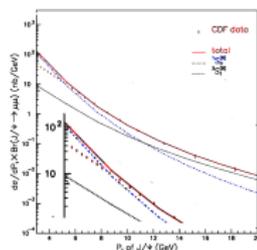

B. Gong, X. Q. Li, J.-X. Wang,
PLB 673:197,2009.

the Colour Octet Dominance challenged at low/mid P_T in pp ?

- **Constraints from the P_T dependence in pp**

- Computation at NLO for CO channel: CO predictions overshoot data at low P_T

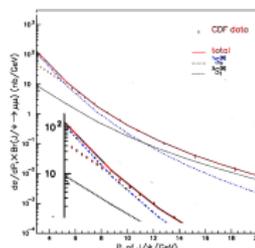

B. Gong, X. Q. Li, J.-X. Wang,
PLB 673:197,2009.

The P_T dependence is badly reproduced and cannot be properly fit

the Colour Octet Dominance challenged at low/mid P_T in pp ?

- **Constraints from the P_T dependence in pp**

- Computation at NLO for CO channel: CO predictions overshoot data at low P_T

B. Gong, X. Q. Li, J.-X. Wang,
PLB 673:197,2009.

The P_T dependence is badly reproduced and cannot be properly fit

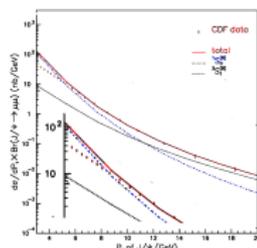

- **Strong constraints from the e^+e^- analyses**

- Recent update by Belle of $e^+e^- \rightarrow J/\psi + X_{non\ c\bar{c}} = 0.43 \pm 0.09 \pm 0.09$ pb

the Colour Octet Dominance challenged at low/mid P_T in pp ?

- **Constraints from the P_T dependence in pp**

- $e^+e^- \rightarrow J/\psi gg$ CO at NLO: 0.9-1.0 pb using universality from the Tevatron (Academical) reduction by a factor of 2-3 of the LDMEs, IF one ignores the CSM

Y. Zhang *et al.*, PRD81:034015,2010.

- Actually, the reduction is much stronger and

the CS channel dominates over CO at low/mid P_T in $p-p$ collisions

Υ & ψ polarisation in hadroproduction at $\mathcal{O}(\alpha_S^4)$ & $\mathcal{O}(\alpha_S^5)$

P.Artoisenet, J.Campbell, JPL, F.Maltoni, F. Tramontano, Phys. Rev. Lett. 101,152001,2008
B. Gong, J.X Wang, Phys. Rev. Lett. 100,232001,2008.

JPL, arXiv:1003.4319 [hep-ph]

→ Complete modification of the polarisation at NLO (also at NNLO*)

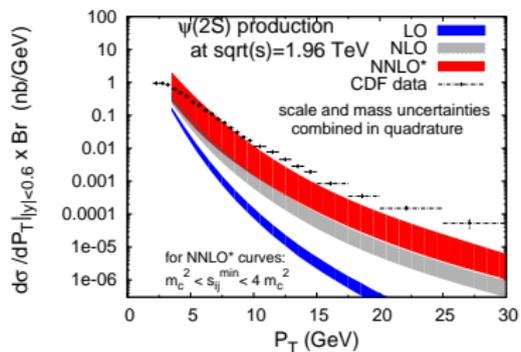

→ Yield from k_T factorisation is also longitudinal (in the helicity frame)

→ This is not yet explained by simple arguments

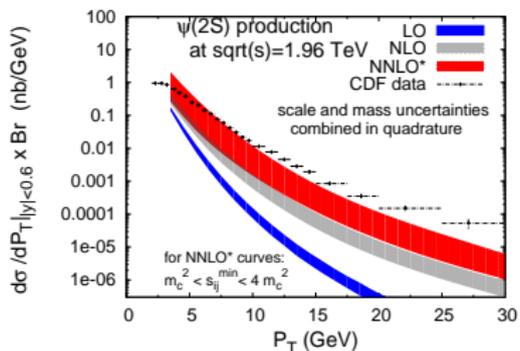

(although reasonable)

Part III

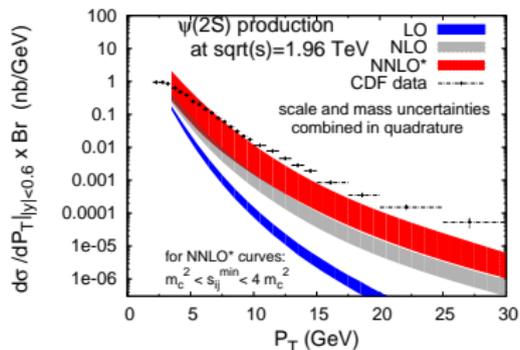

what we do not understand

ψ production at very large P_T 

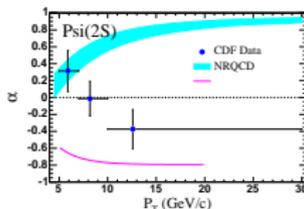

- Could simply be the colour octets (${}^3S_1^{[8]}$)

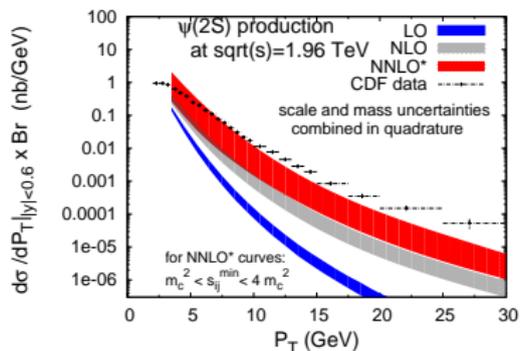

ψ production at very large P_T 

- Could simply be the colour octets ($^3S_1^{[8]}$)
- What about the polarisation measurement, then ?

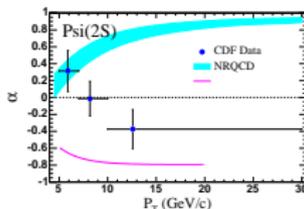

ψ production at very large P_T 

- Could simply be the colour octets ($^3S_1^{[8]}$)
- What about the polarisation measurement, then ?

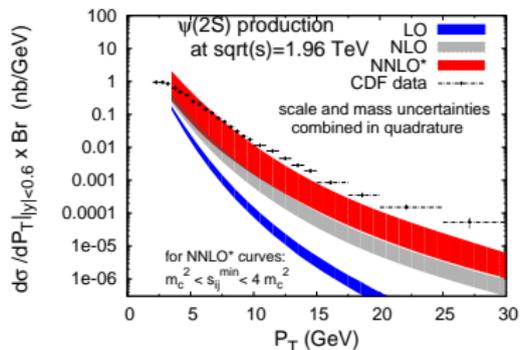

ψ production at very large P_T 

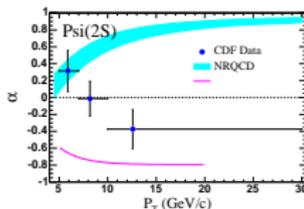

- Could simply be the colour octets ($^3S_1^{[8]}$)
- What about the polarisation measurement, then ?

- Could be the data ...

ψ production at very large P_T 

- Could simply be the colour octets ($^3S_1^{[8]}$)
- What about the polarisation measurement, then ?

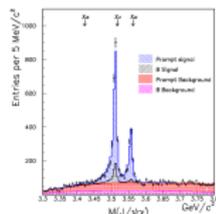

- Could be the data ...
- Let's wait for the LHC data for prompt $\psi(2S)$ or **direct J/ψ**

Other features not understood

- $\sigma(\chi_{c1})/\sigma(\chi_{c2})$: Hera-B vs CDF, COM vs CSM vs CEM

NEW: NLO for χ_c 's: Y.-Q. Ma, K. Wang, K.-T. Chao, arXiv:1002.3987 [hep-ph]

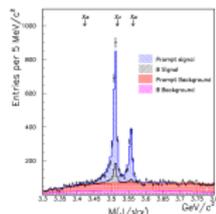

Other features not understood

- $\sigma(\chi_{c1})/\sigma(\chi_{c2})$: Hera-B vs CDF, COM vs CSM vs CEM

NEW: NLO for χ_c 's: Y.-Q. Ma, K. Wang, K.-T. Chao, arXiv:1002.3987 [hep-ph]

- Impact of **initial** k_T of the gluons ?

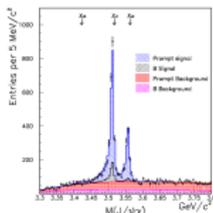

Other features not understood

- $\sigma(\chi_{c1})/\sigma(\chi_{c2})$: Hera-B vs CDF, COM vs CSM vs CEM

NEW: NLO for χ_c 's: Y.-Q. Ma, K. Wang, K.-T. Chao, arXiv:1002.3987 [hep-ph]

- Impact of **initial** k_T of the gluons ?
- Impact of **CNM** on R_{AA} vs y ? Hence, in AA, need for $c\bar{c}$

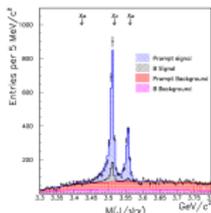

recombination ?

Other features not understood

- $\sigma(\chi_{c1})/\sigma(\chi_{c2})$: Hera-B vs CDF, COM vs CSM vs CEM

NEW: NLO for χ_c 's: Y.-Q. Ma, K. Wang, K.-T. Chao, arXiv:1002.3987 [hep-ph]

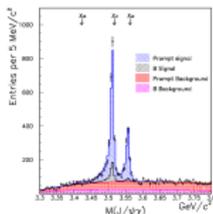

- Impact of **initial k_T** of the gluons ?
- Impact of **CNM on R_{AA} vs y** ? Hence, in AA, need for $c\bar{c}$ **recombination ?**
- In pA and AA how is the **polarisation affected by CNM and QGP ?**

Other features not understood

- $\sigma(\chi_{c1})/\sigma(\chi_{c2})$: Hera-B vs CDF, COM vs CSM vs CEM

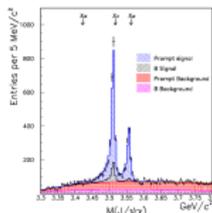

NEW: NLO for χ_c 's: Y.-Q. Ma, K. Wang, K.-T. Chao, arXiv:1002.3987 [hep-ph]

- Impact of **initial k_T** of the gluons ?
- Impact of **CNM on R_{AA} vs y** ? Hence, in AA, need for $c\bar{c}$ **recombination ?**
- In pA and AA how is the **polarisation affected by CNM and QGP ?**
- Is J/ψ an useful probe of QGP ?

Other features not understood

- $\sigma(\chi_{c1})/\sigma(\chi_{c2})$: Hera-B vs CDF, COM vs CSM vs CEM

NEW: NLO for χ_c 's: Y.-Q. Ma, K. Wang, K.-T. Chao, arXiv:1002.3987 [hep-ph]

- Impact of **initial k_T** of the gluons ?
- Impact of **CNM on R_{AA} vs y** ? Hence, in AA, need for $c\bar{c}$ **recombination ?**
- In pA and AA how is the **polarisation affected by CNM and QGP ?**
- Is J/ψ an useful probe of QGP ?
- Is, **in practice**, the charmonium family production/suppression suitable to study “sequential suppression” by QGP ?

Part IV

LHC data at $\sqrt{s} = 7$ TeV

LHC data which are public so far

- CMS:
 - J/ψ in two bins in y : $|y| < 1.4$ and $1.4 < |y| < 2.4$
 - Extraction of the prompt signal (*i.e.* excluding B feed down)
 - Υ cross section and ratio (2S+3S) over (1S)

LHC data which are public so far

- CMS:
 - J/ψ in two bins in y : $|y| < 1.4$ and $1.4 < |y| < 2.4$
 - Extraction of the prompt signal (*i.e.* excluding B feed down)
 - Υ cross section and ratio (2S+3S) over (1S)
- ATLAS:
 - J/ψ in 3 bins in y : $|y| < 0.75$, $0.75 < |y| < 1.5$ and $1.5 < |y| < 2.25$
 - Extraction of the prompt signal

Part V

what we expect from the LHC:

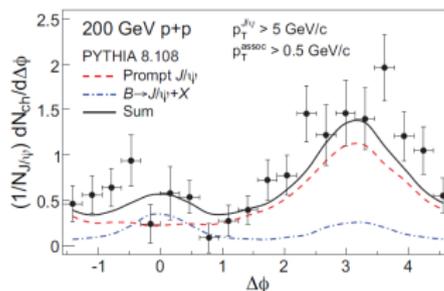

Part V

what we expect from the LHC: new measurements

New observables

- J/ψ + hadron azimuthal correlations

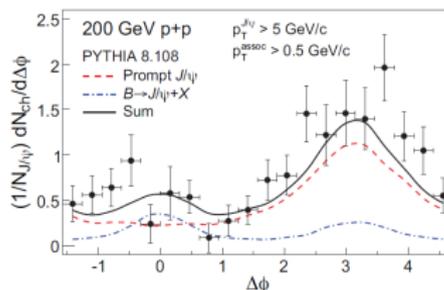

STAR Collab., Phys.Rev.C80:041902 (R),2009.

New observables

- J/ψ + hadron azimuthal correlations

STAR Collab., Phys.Rev.C80:041902 (R),2009.

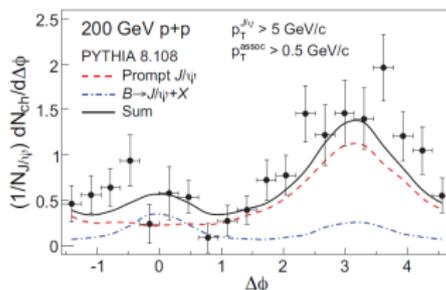

- PYTHIA might not be reliable (Color Singlet at LO: $gg \rightarrow J/\psi g$)

New observables

- J/ψ + hadron azimuthal correlations

STAR Collab., Phys.Rev.C80:041902 (R),2009.

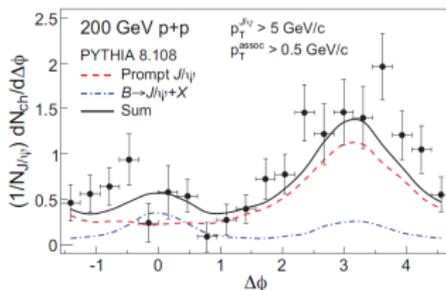

- PYTHIA might not be reliable (Color Singlet at LO: $gg \rightarrow J/\psi g$)
- Need for updates with NLO and NNLO* ($gg \rightarrow J/\psi gg, gg \rightarrow J/\psi ggg$)

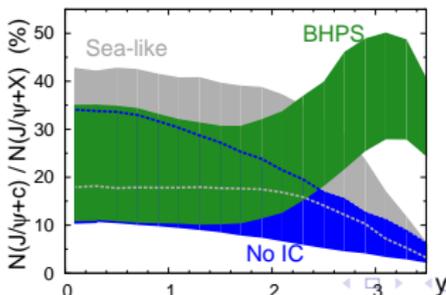

New observables

- J/ψ + hadron azimuthal correlations

STAR Collab., Phys.Rev.C80:041902 (R),2009.

- PYTHIA might not be reliable (Color Singlet at LO: $gg \rightarrow J/\psi g$)
 - Need for updates with NLO and NNLO* ($gg \rightarrow J/\psi gg, gg \rightarrow J/\psi ggg$)
- $J/\psi + D$ or $J/\psi + \text{lepton}$: **peak at $\Delta\phi = \pi$** in the yield integrated over P_T
S. J. Brodsky and JPL, PRD 81 051502 (R), 2010

Besides, the rapidity dependence gives info on $c(x)$

plot for RHIC kinematics

New observables

$$\rightarrow J/\psi + \gamma$$

New observables

→ $J/\psi + \gamma$

- CS rate at NLO \simeq conservative (high) expectation from CO

New observables

→ $J/\psi + \gamma$

- CS rate at NLO \simeq **conservative** (high) expectation from CO
- No new info on \overline{CS} vs CO w.r.t inclusive case ? R.Li and J.X. Wang, PLB 672:51,2009

New observables

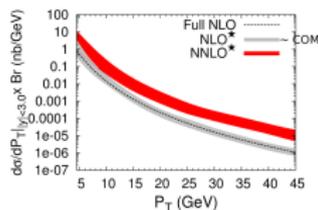

→ $J/\psi + \gamma$

- CS rate at NLO \simeq conservative (high) expectation from CO
- No new info on CS vs CO w.r.t inclusive case ? R.Li and J.X. Wang, PLB 672:51,2009
- But, at NNLO, CS rate clearly above expectation from CO

New observables

→ $J/\psi + \gamma$

- CS rate at NLO \simeq **conservative** (high) expectation from CO
- No new info on CS vs CO w.r.t inclusive case ? R.Li and J.X. Wang, PLB 672:51,2009
- But, at NNLO, CS rate clearly above expectation from CO
- Clearly, **new info on CS vs CO w.r.t inclusive case !**

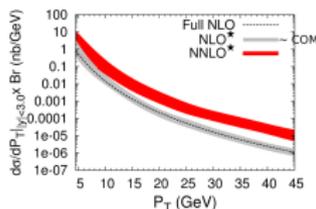

JPL, PLB 679:340,2009.

New observables

→ $J/\psi + \gamma$

- CS rate at NLO \simeq **conservative** (high) expectation from CO
- No new info on CS vs CO w.r.t inclusive case ? R.Li and J.X. Wang, PLB 672:51,2009
- But, at NNLO, CS rate clearly above expectation from CO
- Clearly, **new info on CS vs CO w.r.t inclusive case !**

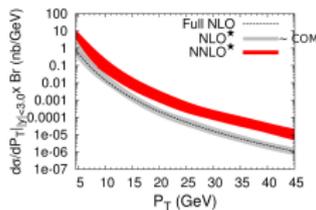

JPL, PLB 679:340,2009.

→ $J/\psi + c\bar{c}, \Upsilon + b\bar{b}$

New observables

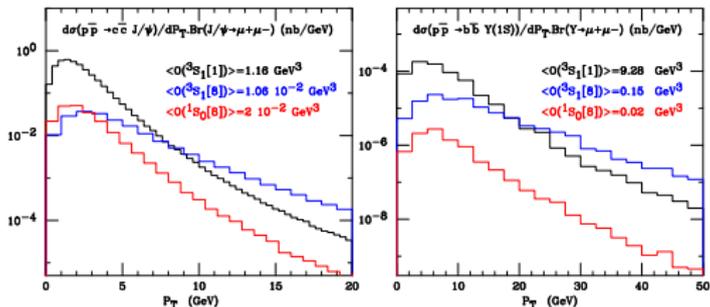

→ $J/\psi + \gamma$

- CS rate at NLO \simeq conservative (high) expectation from CO
- No new info on CS vs CO w.r.t inclusive case ? R.Li and J.X. Wang, PLB 672:51,2009
- But, at NNLO, CS rate clearly above expectation from CO
- Clearly, new info on CS vs CO w.r.t inclusive case !

JPL, PLB 679:340,2009.

→ $J/\psi + c\bar{c}, \Upsilon + b\bar{b}$

- New info on CS vs CO w.r.t inclusive case !

New observables

- Polarisation

New observables

- Polarisation
 - of **direct yields** of $\Upsilon(3S)$, then others

New observables

- Polarisation
 - of **direct yields** of $\Upsilon(3S)$, then others
 - polarisation of the χ_Q (angular dependence of the γ)

New observables

- Polarisation
 - of **direct yields** of $\Upsilon(3S)$, then others
 - polarisation of the χ_Q (angular dependence of the γ)
 - **rapidity dependence** of the polarisation

New observables

- Polarisation
 - of **direct yields** of $\Upsilon(3S)$, then others
 - polarisation of the χ_Q (angular dependence of the γ)
 - **rapidity dependence** of the polarisation
 - ϕ angular dependence of the leptonic decay

New observables

- Polarisation
 - of **direct yields** of $\Upsilon(3S)$, then others
 - polarisation of the χ_Q (angular dependence of the γ)
 - **rapidity dependence** of the polarisation
 - ϕ angular dependence of the leptonic decay
 - polarisation in **different frames**

New observables

- Polarisation
 - of **direct yields** of $\Upsilon(3S)$, then others
 - polarisation of the χ_Q (angular dependence of the γ)
 - **rapidity dependence** of the polarisation
 - ϕ angular dependence of the leptonic decay
 - polarisation in **different frames**
- $J/\psi + J/\psi, J/\psi + \Upsilon ?$

New observables

- Polarisation
 - of **direct yields** of $\Upsilon(3S)$, then others
 - polarisation of the χ_Q (angular dependence of the γ)
 - **rapidity dependence** of the polarisation
 - ϕ angular dependence of the leptonic decay
 - polarisation in **different frames**
- $J/\psi + J/\psi$, $J/\psi + \Upsilon$?
 - strong **sensitivity** on the CO LDME $^3S_1^{[8]}$?

New observables

 - but too small rates even at low P_T ?
- Quarkonium studies via **$p\bar{p}$ decay**
 - planned by LHC-b
 - allow to study h_c as well as ψ
 - maybe different acceptances, nice cross check

Part VI

Conclusions and Outlooks

Conclusions and Outlooks

- LO pQCD (CSM) *fails* as far as $d\sigma/dP_T$ is concerned

Conclusions and Outlooks

- LO pQCD (CSM) *fails* as far as $d\sigma/dP_T$ is concerned
- Yet, the LO (and NLO) CSM *reproduces the yield*:
relevant for heavy-ion studies !

Conclusions and Outlooks

- LO pQCD (CSM) **fails** as far as $d\sigma/dP_T$ is concerned
- Yet, the LO (and NLO) CSM **reproduces the yield**:
relevant for heavy-ion studies !
- Agrees with the **strong reduction of CO contributions** at low/mid P_T
expected from e^+e^- analyses

Conclusions and Outlooks

- LO pQCD (CSM) **fails** as far as $d\sigma/dP_T$ is concerned
- Yet, the LO (and NLO) CSM **reproduces the yield**:
relevant for heavy-ion studies !
- Agrees with the **strong reduction of CO contributions** at low/mid P_T
expected from e^+e^- analyses
- Moreover, **QCD-corrections** bring **agreements** for $d\sigma/dP_T$ in
 - γp for J/ψ
 - pp for Υ (Tevatron)
 - pp for ψ (RHIC, Tevatron) (gap at large P_T)
- **Drawback**: large theoretical uncertainties. . .

Conclusions and Outlooks

- LO pQCD (CSM) **fails** as far as $d\sigma/dP_T$ is concerned
- Yet, the LO (and NLO) CSM **reproduces the yield**:
relevant for heavy-ion studies !
- Agrees with the **strong reduction of CO contributions** at low/mid P_T
expected from e^+e^- analyses
- Moreover, **QCD-corrections** bring **agreements** for $d\sigma/dP_T$ in
 - γp for J/ψ
 - pp for Υ (Tevatron)
 - pp for ψ (RHIC, Tevatron) (gap at large P_T)
- **Drawback**: large theoretical uncertainties. . .
- Very soon, the LHC results on inclusive yields will be
more precise than the theory ...
- The time has come for another look with **new observables**

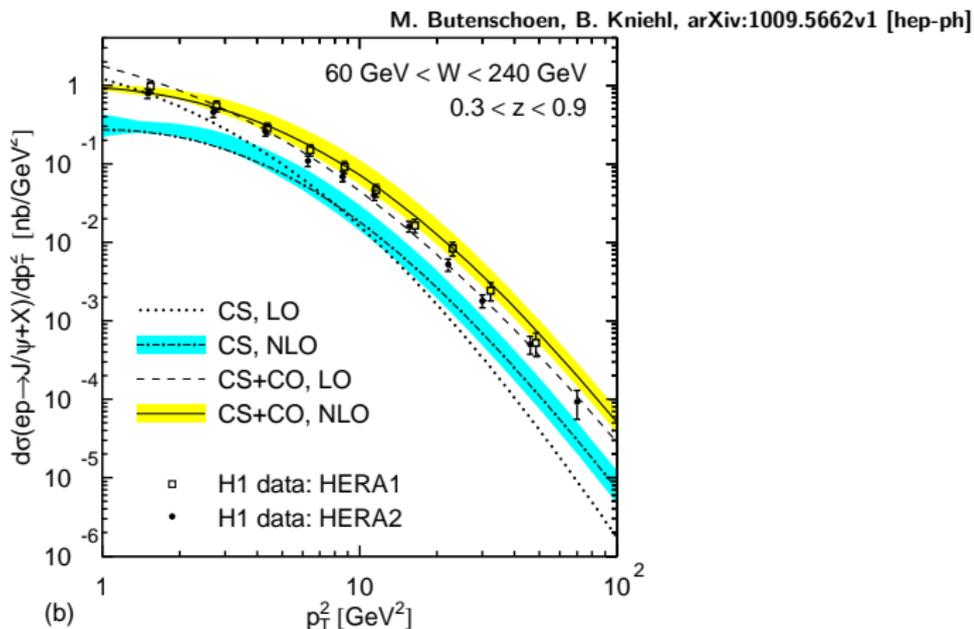

at the LHC or elsewhere !

Part VII

HERA: CSM vs COM at NLO

→ Equally good (or ... bad) description of large P_T data.
