

3-cathode system 6-way cross

F. Avino, T. Mikkola, A. Sublet

- Revolver magnet assembly ready (7).
- x4 Teflon flange (1) + x7 magnet assembly stops (6) machined by tomorrow.
- Stainless steel tubes supporting the magnets (3) to be exchanged (bended). I will check tomorrow, should have received them in my office.

Blank assembly of 3-cathode system: **straightness problem, ongoing solving.**

Made a drawing for a water cut piece to connect the bottom of the tubes at the right distance, before tightening the flanges, similar to WOW.
