

# Dark Sector Searches at Belle II

**Huw Haigh**, on behalf of the Belle II Collaboration  
The 30th International Symposium on Lepton Photon Interactions at High Energies  
[huw.haigh@oeaw.ac.at](mailto:huw.haigh@oeaw.ac.at)

12<sup>th</sup> January 2022

European Research Council  
Established by the European Commission

# Dark Sector Searches

- Probe light dark sectors with low mass mediators  $O(\text{GeV})$
- Possible portals between SM and DS include:
  - Vector portal (Dark photon,  $Z'$ )
  - Pseudo-scalar portal (Axion-like particle)
  - Scalar portal
  - Neutrino portal
- Belle II advantages:
  - Hermetic detector
  - Clean collision environment
  - Excellent PID
  - Dedicated low-multiplicity triggers

# SuperKEKB

- **B-factory** located in Tsukuba, Japan.
- Asymmetric  $e^+e^-$  collider operating at  $m_Y$   
(4S) = **10.58 GeV** (7 GeV  $e^-$  + 4 GeV  $e^+$ )
- x30 instantaneous luminosity increase over KEKB
- Regular operations commenced March 2019

**WORLD RECORD  
INSTANTANEOUS LUMINOSITY!**

$$3.81 \times 10^{34} \text{ cm}^{-2} \text{ s}^{-1}$$

# Belle II

- 1102 members from 123 institutes across the globe
- Pilot run in 2018, physics runs began March 2019
- Target **x50 Belle data** ( $\approx 50\text{ab}^{-1}$ )
- Wide-ranging and varied physics program: B and D physics, quarkonium, T-physics, dark sector, ...

**267fb<sup>-1</sup> recorded  
integrated luminosity**

# Belle II

# Trigger System

- Two-tier trigger system:
  - Hardware based low level trigger (L1)
  - Software based high level trigger (HLT)
- Reduce effects from beam backgrounds (Touschek effect, beam-gas scattering, radiative Bhabha, ... )
- L1 trigger (not available in Belle)
  - Max trigger rate 30KHz
  - Combines 4 sub-detector triggers; CDC, TOP, KLM, ECL
- Dedicated trigger lines for dark sector and low-multiplicity physics:
  - Single photon
  - Single track
  - Multi-track triggers
  - ECL cluster triggers
  - 3D neural trigger

**Invisible  $Z'$**

# Invisible $Z'$

- $U(1)'$  extension of standard model  $\rightarrow$  new massive gauge boson
- Couples to  $\mu$  and  $\tau$  leptons ( $L_\mu - L_\tau$ ) via  $g'$
- possibilities;
  - $(g-2)_\mu$
  - $B \rightarrow s\mu\mu$
  - Mediator between SM and DS

**JHEP 1612 (2016) 106**  
**PRD 89, 113004 (2014)**

$$\begin{aligned}M_{Z'} < 2M_\mu &\implies BF[Z' \rightarrow \text{invisible}] = 1, \\2M_\mu < M_{Z'} < 2M_\tau &\implies BF[Z' \rightarrow \text{invisible}] \simeq 1/2, \\M_{Z'} > 2M_\tau &\implies BF[Z' \rightarrow \text{invisible}] \simeq 1/3.\end{aligned}$$

$$\begin{aligned}\text{if } M_{Z'} > 2M_\chi \\BF(Z' \rightarrow \chi\bar{\chi}) &= 1\end{aligned}$$

---

$$\mathcal{L} = \sum_\ell \theta g' \bar{\ell} \gamma^\mu Z'_\mu \ell$$

# Invisible Z' II

- First published Belle II result - 2018 using  $276\text{pb}^{-1}$  (2018 pilot run data)
- Event reconstruction - recoil mass from  $\mu^+\mu^-$ -pair with photon veto.
- Main challenge: reduction of  $\mu^+\mu^-\gamma$  background.
- Bump hunt of recoil mass distribution.
- Main backgrounds from QED processes;
  - $\mu^+\mu^-\gamma$
  - $\mu^+\mu^-e^+e^-$
  - $\tau^+\tau^-\gamma$

## PRL 124, 141801 (2020)

# Invisible Z' II

**Updated result expected soon!**

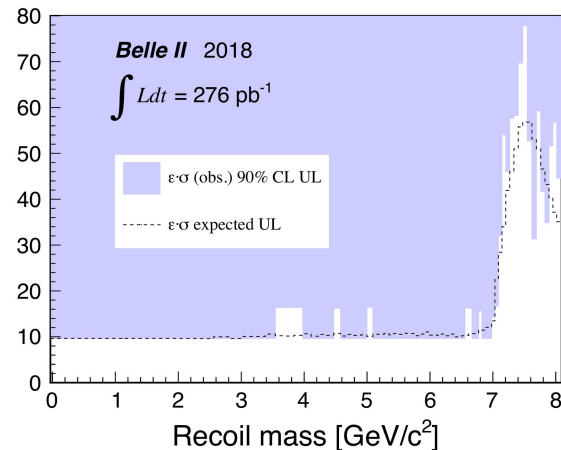

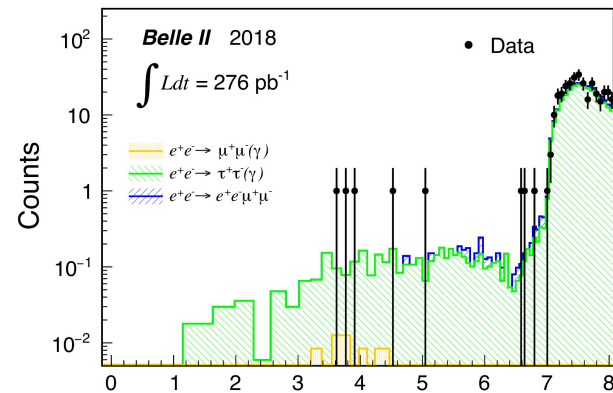

\*preliminary (conservative) systematics

# Invisible $Z'$ III - LFV

- Event reconstruction - recoil mass from  $e\mu$ -pair with photon veto.
- Included in same publication
- Model independent search with the same criteria.

**PRL 124, 141801 (2020)**

# Axion-like Particles

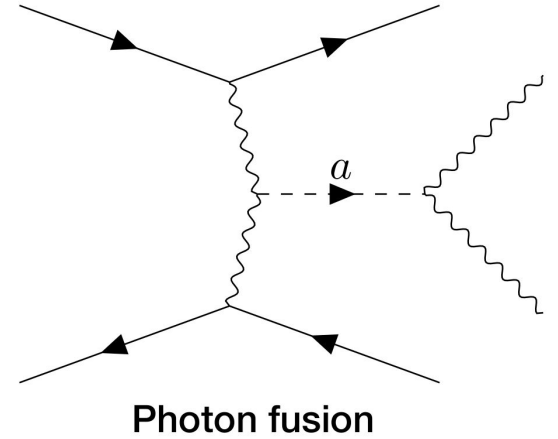

# Axion-like Particles I

- Pseudoscalar particles that couple to bosons
- Unlike QCD axions, coupling and mass of ALPs are taken to be independent
- Search conducted via two photon coupling;
  - Photon fusion (high QED background)
  - **ALP-strahlung** (more promising)

$$\mathcal{L} \supset -\frac{g_{a\gamma\gamma}}{4} a F_{\mu\nu} \tilde{F}^{\mu\nu} \quad \tau_a \sim 1/g_{a\gamma\gamma}^2 m_a^3$$

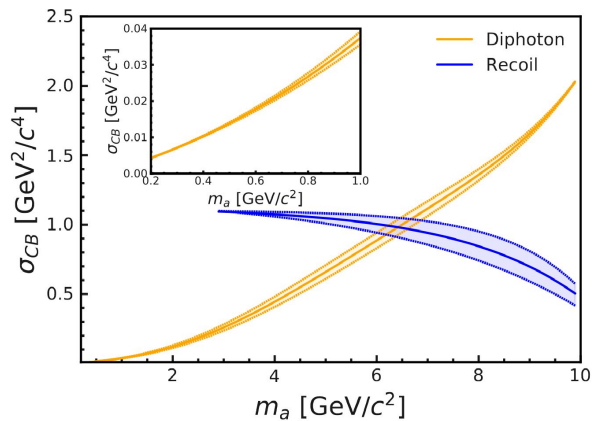

First search at B-factory

# Axion-like Particles II

- Search for events containing 3 photons which sum to beam energy [Y (4S)], no tracks.
- Main challenge: signal signature, three photons often difficult to resolve
- Bump hunt in diphoton mass and squared recoil mass.
  - Low ALP mass  $\rightarrow$  **squared diphoton mass**
  - High ALP mass  $\rightarrow$  **squared recoil mass**
- Main backgrounds:
  - $e^+e^- \rightarrow \gamma\gamma(\gamma)$
  - $e^+e^- \rightarrow e^+e^-\gamma$
  - $e^+e^- \rightarrow P\gamma\gamma, P=\pi^0, \eta, \eta'$

# Axion-like Particles III

- Search conducted with  $445\text{pb}^{-1}$  of 2018 pilot run data.
- 500 fits in sliding ranges with steps of half mass resolution.
- No excess observed (largest local sig. -  $2.8\sigma$ )

**PRL 125, 161806 (2020)**

# Dark Higgsstrahlung

# Dark Higgsstrahlung I

- Dark photon mass generated via spontaneous symmetry breaking of  $\mathbf{U(1)'}$  extension to SM, introduces dark Higgs boson
- In minimal scenario: a single **dark photon,  $A'$** , and a single **dark Higgs,  $h'$**
- $e^+e^- \rightarrow A'h'$  (higgsstrahlung)
  - Focus on  $m_{h'} < m_{A'} \Rightarrow h'$  has long lifetime, escapes detection
  - Search for  $\mu^+\mu^- + \text{missing energy}$
  - Peak in 2D recoil mass vs. dimuon mass distribution

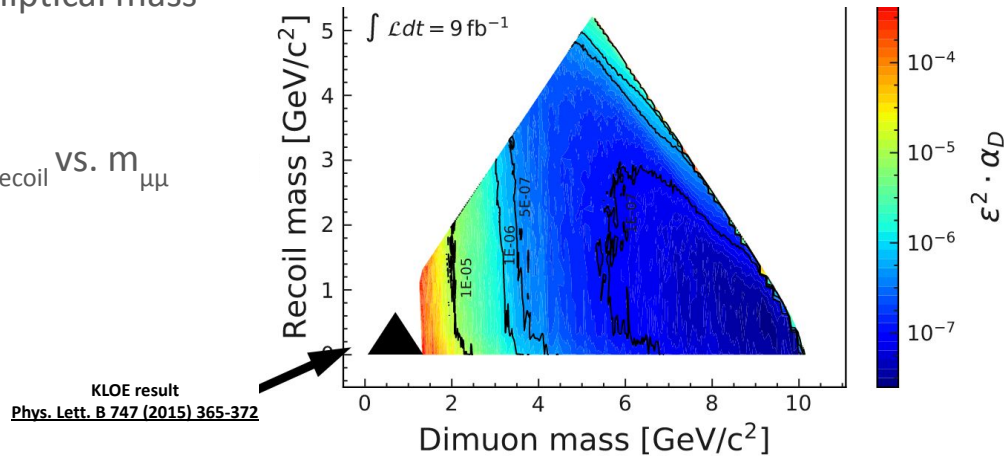

$$\sigma \propto \epsilon^2 \times \alpha_D$$

# Dark Higgsstrahlung II

- Background suppression based on kinematic features
- Main challenge: measurement strategy, looking for two particles while scanning and counting 9000 elliptical mass windows.
- Improvements w.r.t KLOE result;
  - Probing unconstrained regions in 2D  $m_{\text{recoil}}$  vs.  $m_{\mu\mu}$  plane.
  - Probing non-trivial regions of  $\varepsilon^2 \alpha_D$
- Backgrounds:
  - $\mu^+ \mu^- \gamma$
  - $\mu^+ \mu^- e^+ e^-$
  - $\tau^+ \tau^- \gamma$

Results very soon

# Conclusion

- Broad and varied dark sector searches at Belle II => set to lead the field in the MeV - GeV mass range in the coming years
- Belle II has collected  $267\text{fb}^{-1}$  thus far -> will collect  $\approx 50\text{ab}^{-1}$  in the next decade.
- First results published (using 2018 pilot run data):
  - $Z' \rightarrow \text{invisible}$  (with LFV  $Z'$ ) (PRL 124, 141801 (2020))
  - $\text{ALP} \rightarrow \gamma\gamma$  (PRL 125, 161806 (2020))
- Further results in the pipeline with data collected since 2019:
  - $A' \rightarrow \text{invisible}$  search
  - Dark higgsstrahlung
  - $Z' \rightarrow \text{invisible}$  update
  - B decays
  - Much more!

# Backup

# Dark Photon

- $U(1)'$  extension to SM introduces new massive gauge boson  $A'$  of spin 1.
- Coupled to SM photon by kinetic mixing parameter  $\epsilon$
- $m_{DM} < 0.5m_{A'} \Rightarrow A'$  decays into an invisible state
- Search for single high energy photon (ISR)
- Backgrounds;
  - $e^+e^- \rightarrow \gamma\gamma(\gamma)$
  - $e^+e^- \rightarrow e^+e^-\gamma$
  - Cosmics

- Improvements over BaBar;
  - No projective cracks in ECL
  - KLM veto
  - More hermetic calorimeter

# Other Searches

- Dark photon
- Dark scalar;  $e^+e^- \rightarrow \tau^+\tau^-S(\rightarrow l^+l^-)$
- Dark matter from B decays:
  - $B^+ \rightarrow K^+S(\rightarrow l^+l^-)$
  - $B^+ \rightarrow K^+a(\rightarrow \gamma\gamma)$
- Inelastic dark matter (LLP)
- Other  $Z'$  decays:
  - $e^+e^- \rightarrow \mu^+\mu^-Z'(\rightarrow \mu^+\mu^-)$
  - $e^+e^- \rightarrow \mu^+\mu^-Z'(\rightarrow \tau^+\tau^-)$
- Magnetic monopoles
- AND MORE!

# Electromagnetic Calorimeter (ECL)

- No projective cracks in  $\phi$  in ECL barrel
- More hermetic => more efficient
