## 30th International Symposium on Lepton Photon Interactions at High Energies

Contribution ID: 259

Type: Parallel session talk

## Probing new physics at the LUXE experiment

Tuesday 11 January 2022 17:30 (20 minutes)

The proposed LUXE experiment (LASER Und XFEL Experiment) at DESY, Hamburg, using the electron beam from the European XFEL, aims to probe QED in the non-perturbative regime created in collisions between high-intensity laser pulses and high-energy electron or photon beams. This setup also provides a unique opportunity to probe physics beyond the standard model. In this talk we show that by leveraging the large photon flux generated at LUXE, one can probe axion-like-particles (ALPs) up to a mass of 350 MeV and with photon coupling of  $3x10^{\circ}{-6}$  GeV $^{-1}$ . This reach is comparable to FASER2 and NA62. In addition, we will discuss other probes of new physics such as ALPs-electron coupling.
