## Latest cross section measurements of the $t\bar{W}$ process at CMS

*Monday 10 January 2022 16:34 (1 minute)*

Single top quark production is the subleading production process of top quarks at the LHC after the top quark pair production. The latest measurements of single top quark production ( $t\bar{W}$ ) cross sections are presented using data collected by the CMS detector at a center-of-mass energy of 13 TeV. The results are confronted with precise theory calculations.
