Latest cross section measurements of the tW process at CMS

Monday, January 10, 2022 4:34 PM (1 minute)

Single top quark production is the subleading production process of top quarks at the LHC after the top quark pair production. The latest measurements of single top quark production (tW) cross sections are presented using data collected by the CMS detector at a center-of-mass energy of 13 TeV. The results are confronted with precise theory calculations.
