

Are generalized and transverse momentum dependent parton distributions related?

Wednesday 18 April 2007 15:20 (20 minutes)

Recent work suggests a close relation between generalized and transverse momentum dependent parton distributions (TMDs), in particular for the so-called naive time-reversal odd TMDs. In the talk our present knowledge on this topic will be briefly summarized. Moreover, an extension of the existing work in the literature will be discussed.
