

# Tests of power corrections for $D$ and $T_m$

- Select 3-jet events with  $y_3 > y_{\text{cut}}$
- Differential distributions obtained with CAESAR at  $Q = 91.2 \text{ GeV}$

[AB, G. Salam, G. Zanderighi hep-ph/0407286]

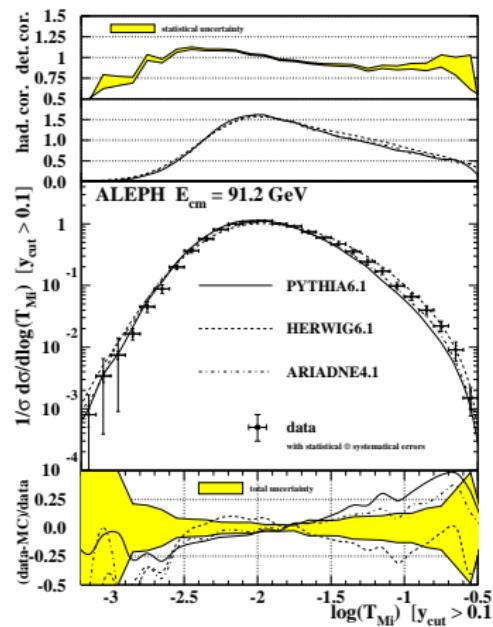

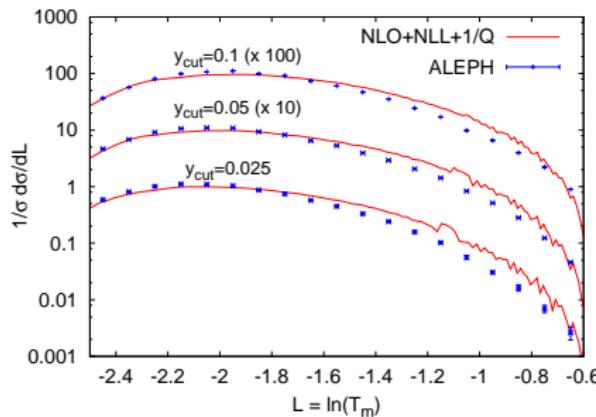

- $D$ -parameter: first ever  $\alpha_s$ - $\alpha_0$  fits in a three-jet event shapes!
- Good fits only at the right of the peak:  $\chi^2/\text{d.o.f.}(y_3 > 0.1) = 12/20$   
⇒ Small- $D$  region: shape function or large subleading logs?

# Tests of power corrections for $D$ and $T_m$

- Select 3-jet events with  $y_3 > y_{\text{cut}}$
- Differential distributions obtained with CAESAR at  $Q = 91.2 \text{ GeV}$

[AB, G. Salam, G. Zanderighi hep-ph/0407286]

Thrust minor PC should be positive

MC say PC are negative at large  $T_m$   
⇒ PC from 4-jet configurations?
