

## The $t\bar{t}$ total cross section at hadron colliders at NNLL

*Thursday 16 September 2010 14:45 (30 minutes)*

Using the SCET-formalism, we perform threshold resummation in  $x$ -space for top-quark pair production at hadron colliders. Our analysis extends to NNLL, including soft and coulomb gluon resummation. Results for the total cross section of  $t\bar{t}$  production at the LHC and the Tevatron are presented.
