

MSSM Higgs physics at the LHC

Friday 19 August 2011 11:20 (20 minutes)

I'll discuss the reach of the 7 TeV LHC in the search for Standard Model-like Higgs bosons in different benchmark scenarios, as well as the complementarity of the standard searches with non-standard Higgs searches. Searches for SUSY Higgs bosons from cascade decays will also be discussed in some detail.

Presenter: WAGNER, Carlos (University of Chicago and Argonne National Laboratory)
