

- 1. Can be containerized for reproducibility
- 2. Can be provided as a service

color legend:

To expand what Lindsey said, in addition to the "user interface DAG" (what the user interacts with) and the "libraries DAG" (what software does the heavy lifting), this all compiles down to a "facilities DAG" (what services the facility offers as a service to get this done). --- Brian Bockleman

alternate color coding semantics / annotations for other purposes:
 - ideal for GPU / HPC / HTC / Cloud
 - ideal for REANA, FuncX, JupyterHub, ServiceX/Skyhook

What is an analysis facility? Is it a single thing, or a collection of facilities that we invoke different functionality on

Analysis Facility

Analysis System

time expectation: we usually discuss event rate (Hz) rather than how long it takes

Analysis Grand Challenge
