Radiation environment simulation and specifications

Tuesday 2 February 2021 10:20 (20 minutes)

In addition to data from radiation monitors, FLUKA simulations are a critical tool to predict the radiation levels on electronic equipment at the LHC and in other CERN accelerators, transfer lines, and facilities. This talk presents an overview of the most relevant results, focusing on the HL-LHC radiation level specifications recently included in a comprehensive document.

Presenter: Dr LERNER, Giuseppe (CERN)

Session Classification: Services
