Part I: **Brief motivation** (see also David's talk)

Part II: **New methods**

CWoLa, SA-CWoLa, and SALAD

Part III: **First results from data**

Part IV: **Outcome of the LHC Olympics**

(Brief) Motivation

Theoretical and **experimental** questions motivate a deep exploration **of the fundamental structure of nature**

Dark matter

Hierarchy problem

Strong CP

Flavor puzzles

Baryogenesis

Dark energy

We have performed thousands of hypothesis tests & have no significant evidence for physics beyond the Standard Model

Three possibilities

(Brief) Motivation

Theoretical and **experimental** questions motivate a deep exploration **of the fundamental structure of nature**

Dark matter

Hierarchy problem

Strong CP

Flavor puzzles

Baryogenesis

Dark energy

We have performed thousands of hypothesis tests & have no significant evidence for physics beyond the Standard Model

Three possibilities

(1) There is nothing new at LHC energies

(Brief) Motivation

This is what keeps me up at night!

(3) We are not looking in the right place

There are many new ideas that make use of modern machine learning

The goal is to learn **directly from data**, injecting as little bias as possible

N.B. this is just for signal sensitivity - there is also model dependence for determining the background

New Methods I: CWoLa

Data are unlabeled and in the best case, come to us as mixtures of two classes (“signal” and “background”).

Mixed Sample 1

Mixed Sample 2

(we don't get to observe the color of the circles)

Weak supervision: *Classification Without Labels*

10

Can we learn
without any label
information?

Mixed Sample 1

Mixed Sample 2

Weak supervision: *Classification Without Labels*

Can we learn
without any label
information?

Yes !

*Training on impure
samples is
(asymptotically)
equivalent to training
on pure samples*

Mixed Sample 1

Mixed Sample 2

*CWoLa is 100% simulation independent.
Can we use simulation to improve it but still be as
independent from simulation as possible?*

General idea of CWoLa: **train a classifier**
to distinguish data in the signal region
from data in a **reference sample**.

*CWoLa is 100% simulation independent.
Can we use simulation to improve it but still be as independent from simulation as possible?*

General idea of CWoLa: **train a classifier** to distinguish data in the signal region from data in a **reference sample**.

SALAD

SA-CWoLa

New Method I: SA-CWoLa

Need the CWoLa classifier to ignore information correlated with m_{jj}

New Method I: SA-CWoLa

Need the CWoLa classifier to ignore information correlated with m_{jj}

Can use simulation to enforce this*!

$$\text{Loss} = (\mathbf{SR \text{ vs. SB in data}}) - \lambda (\mathbf{SR \text{ vs. SB in MC}})$$

*Can't combine CWoLa with standard decorrelation approaches because they may wash out the signal

New Method I: SA-CWoLa

Need the CWoLa classifier to ignore information correlated with m_{jj}

Can use simulation to enforce this*!

$$\text{Loss} = (\text{SR vs. SB in data}) - \lambda (\text{SR vs. SB in MC})$$

*Can't combine CWoLa with standard decorrelation approaches because they may wash out the signal

New Method II: SALAD

We want the reference sample to be as close to the SR background as possible.

We can take simulation as the reference, but train a parameterized **reweighting model** in the sidebands

The reweighting function (also a NN) is a function of m_{jj}

New Method II: SALAD

We want the reference sample to be as close to the SR background as possible.

We can take simulation as the reference, but train a parameterized **reweighting model** in the sidebands

The reweighting function (also a NN) is a function of m_{jj}

Selected Method Summary

57

Method	Reference Bin	Reference Sample	Approach
CWoLa	Sideband Region	Data	Standard classifier
SA-CWoLa	Sideband Region	Data	Decorrelated classifier
ANODE	Signal Region	Data	Density estimation
SALAD	Signal Region	Simulation	Reweighted classifier

Several teams did well on the first black box, but black boxes 2 (no signal) and 3 (multijet + multiple decays) were much harder.

This was an incredibly rewarding exercise and we hope it will be an important benchmark for the future!

*Stay tuned for our community report with
may more details ! (ETA: next week)*

Deep-learning based anomaly detection has a great potential for discovery!

Check out the LHC Olympics website and stay tuned for our community report (ETA: next week)

<https://lhco2020.github.io/homepage/>

We still need new ideas and clever ways of implementing (including computing challenges!) and extending current proposals.
