A NbTi persistent current switch for MRI superconducting magnet

Thursday 18 November 2021 10:00 (20 minutes)

The persistent current switch (PCS) is essential for magnetic resonance imaging magnet (MRI) magnet which works in closed-loop mode. In this paper, the design of NbTi/CuNi thermally triggered PCS is presented. Furthermore, quench test and switching time test have been given at 4.2-K temperature and 0-3 T magnetic field.
