

Life after Accelerator Physics: Public Health Research

Hannah Harrison

hh504@medschl.cam.ac.uk
@dr_h_harrison

Quick Introduction

- 2010 – 2014: MSci in Physics (Imperial)
- 2014 – 2018: DPhil in Accelerator Physics (Oxford)
Thesis: The Design of a Single-Shot Longitudinal Bunch Profile Monitor Using Smith-Purcell Radiation
- 2018 – 2020: NIHR Research Methods Fellowship (Cambridge)
Included Mphil in Primary Care Research Methods
Thesis: Validation of Risk Prediction Models for Kidney Cancer using the UK Biobank Cohort
- 2020 – 2021: NIHR Development and Skills Award (Cambridge)

Why Public Health?

- Breadth of research topics
 - Methods – data science, epidemiology, qualitative research
 - Areas – chronic illness, infectious disease, inequalities in healthcare
- Multidisciplinary team
 - Clinicians, statisticians, clinical academics, non-clinical academics, data managers, medical librarians
- Overlap in skills
 - Statistics
 - Computing skills (data management, algorithm/model development)
 - Research skills

Project Overview

Cost Effectiveness

Screening Tests

Benefits and Harms
of Screening

**Risk Stratified
Screening**

Screening for
Kidney Cancer

Public Acceptability

Risk Communication

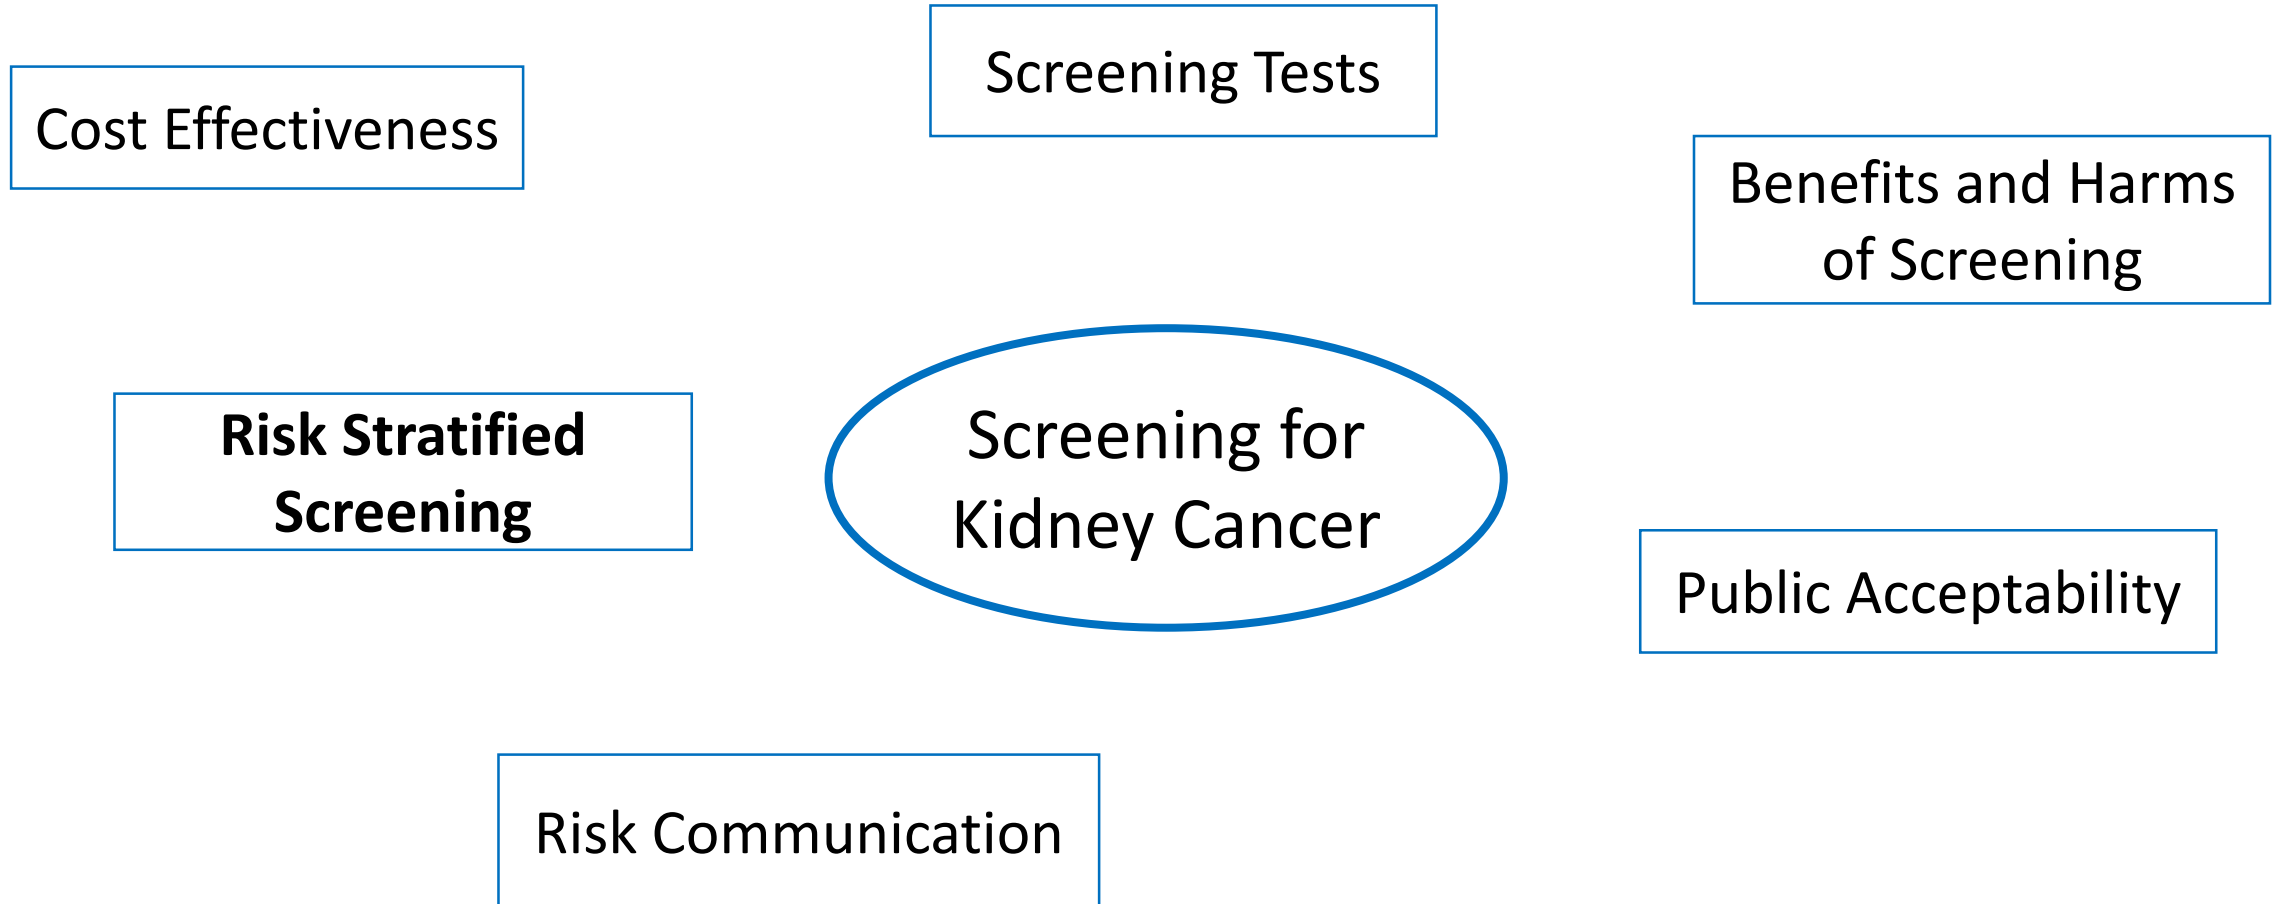

Kidney Cancer Screening

- There are 13,000 new cases of kidney cancer in the UK each year [1]
- Results in about 4500 deaths annually
 - Often asymptomatic at early stages
 - 25% of individuals have metastasis at diagnosis
- Screening program?
 - Could help improve early detection
 - Kidney cancer has a relatively low prevalence
 - Harms of screening could easily outweigh benefits
- Risk stratification could provide a solution
 - Models using demographic, lifestyle, biomarker or genetic risk factors

Project Overview

Risk Stratified Screening

- What work has already been published in the area?

Harrison, H., Thompson R. E., Lin Z., Rossi S. H., Stewart G. D., Griffin S. J., and Usher-Smith J. A., “Risk Prediction Models for Kidney Cancer: A Systematic Review”, *European Urology Focus*, (2020)

- How does existing research perform?

Validation of Risk Prediction Models for Kidney Cancer using the UK Biobank Cohort (MPhil Thesis)

- Model development
- Could this be incorporated into another screening programme?
- Is using a model to select for screening acceptable to the public?

Harvey-Kelly L. L. W., Harrison H., Rossi, S. H., Griffin S. J., Stewart G. D., Usher-Smith J. A., “Public attitudes towards screening for kidney cancer: an online survey”, *BMC Urology* (2020)

Usher-Smith, JA, Harvey-Kelly, LLW, Rossi, SH, Harrison, H, Griffin, SJ, Stewart, GD. Acceptability and potential impact on uptake of using different risk stratification approaches to determine eligibility for screening: A population-based survey. *Health Expectations*. (2020)
