

New Approaches to Fine Granularity Timing Detectors

Tuesday, May 25, 2021 5:12 AM (18 minutes)

A collaboration involving a US National Laboratory (Brookhaven National Laboratory), a private-sector technology company (Cactus Materials, Inc.) and a University institute (the Santa Cruz Institute for Particle Physics at the University of California, Santa Cruz) has been working on new approaches to the development of highly-granular timing layers for minimum-ionizing particle and X-Ray detection. Progress has been made in the design and prototyping of the Deep Junction LGAD, a novel approach to the implementation of impact-ionization gain in silicon diode detectors that allows for the reduction of the granularity scale to below 100 microns, while maintaining DC coupling to the readout electrodes. Work is also progressing on high-density interconnect ("3D Integration") technology geared towards the enabling of commensurate high-density readout of granular systems. Progress in both of these areas will be presented.

TIPP2020 abstract resubmission?

No, this is an entirely new submission.

Funding information

Primary authors: Dr MAZZA, Simone Michele (University of California,Santa Cruz (US)); Prof. SCHUMM, Bruce Andrew (University of California,Santa Cruz (US)); GEE, Carolyn (University of California,Santa Cruz (US)); ZHAO, Yuzhan (University of California Santa Cruz); ZHAO, Yuzhan (University of California,Santa Cruz (US)); GIACOMINI, Gabriele (Brookhaven National Laboratory (US)); TRICOLI, Alessandro (Brookhaven National Laboratory (US)); ISLAM, Rafiqul (Cactus material); AYYOUB, Sager; MONY, Sujyot (CACTUS materials)

Presenter: Dr MAZZA, Simone Michele (University of California,Santa Cruz (US))

Session Classification: Sensor Posters: SS Position

Track Classification: Sensors: Sensors: Solid-state position sensors
