Directly Probing the Higgs-top Coupling at High Scales

Wednesday, 26 May 2021 17:45 (15 minutes)

The top-quark Yukawa coupling y_t is the strongest interaction of the Higgs boson in the Standard Model (SM) with $y_t \sim 1$. Due to its magnitude, it plays a central role in Higgs phenomenology in the SM and would be most sensitive to physics beyond the Standard Model. The top Yukawa can be directly measured at the LHC via top pair production in association with a Higgs boson $t\bar{t}h$. We study new physics effects for the Higgs-top coupling at high scales, using jet substructure techniques. We present the high-luminosity LHC sensitivity to new physics parametrized in the EFT framework and through a general Higgs-top form factor.

Summary

Primary authors: Dr GONCALVES, Dorival (Oklahoma State University); QIN, Han (University of Pittsburgh); MAMMEN ABRAHAM, Roshan (Oklahoma State University); LEUNG, Sze Ching Iris (University of Pittsburgh); Dr HAN, Tao (University of Pittsburgh)

Presenter: MAMMEN ABRAHAM, Roshan (Oklahoma State University)

Session Classification: Higgs IV
