# Quarkonium production at the LHC

LHC offers a unique opportunity to explore quarkonium production in a very wide kinematic range

- Forward & mid rapidity coverage
- Charmonia down to zero  $p_T$
- Bottomonia down to zero  $p_T$

- Mid-rapidity coverage
- Charmonia at high  $p_T$
- Bottomonia down to zero  $p_T$

- Wide forward rapidity coverage
- Charmonia down to zero  $p_T$
- Bottomonia down to zero  $p_T$

- Mid-rapidity coverage
- Charmonia at high  $p_T$
- Bottomonia down to zero  $p_T$

- Complementarity of all the experiments

In this presentation a selection of the latest LHC results in p–Pb collisions

## Charmonia in p–Pb collisions ( $\sqrt{s_{NN}} = 5.02, 8.16$ TeV)

- $J/\psi$  production as a function of  $p_T$ ,  $y$  and centrality

[JHEP 07 \(2018\) 160](#)

[EPJC 77 \(2017\) 269](#)

[PLB 774 \(2017\)](#)

[JHEP 2009 \(2020\) 162](#)

- $\psi(2S)$  production as a function of  $p_T$ ,  $y$  and centrality

[JHEP 1603 \(2016\) 133](#)

[JHEP 02 \(2021\) 002](#)

[JHEP 07 \(2020\) 237](#)

[EPJC 78 \(2018\) 171](#)

## Bottomonia in p–Pb collisions ( $\sqrt{s_{NN}} = 5.02, 8.16$ TeV)

- $\Upsilon(nS)$  production as a function of  $p_T$ ,  $y$  and centrality

[PLB 806 \(2020\) 135486](#)

[JHEP 11\(2018\)194](#)

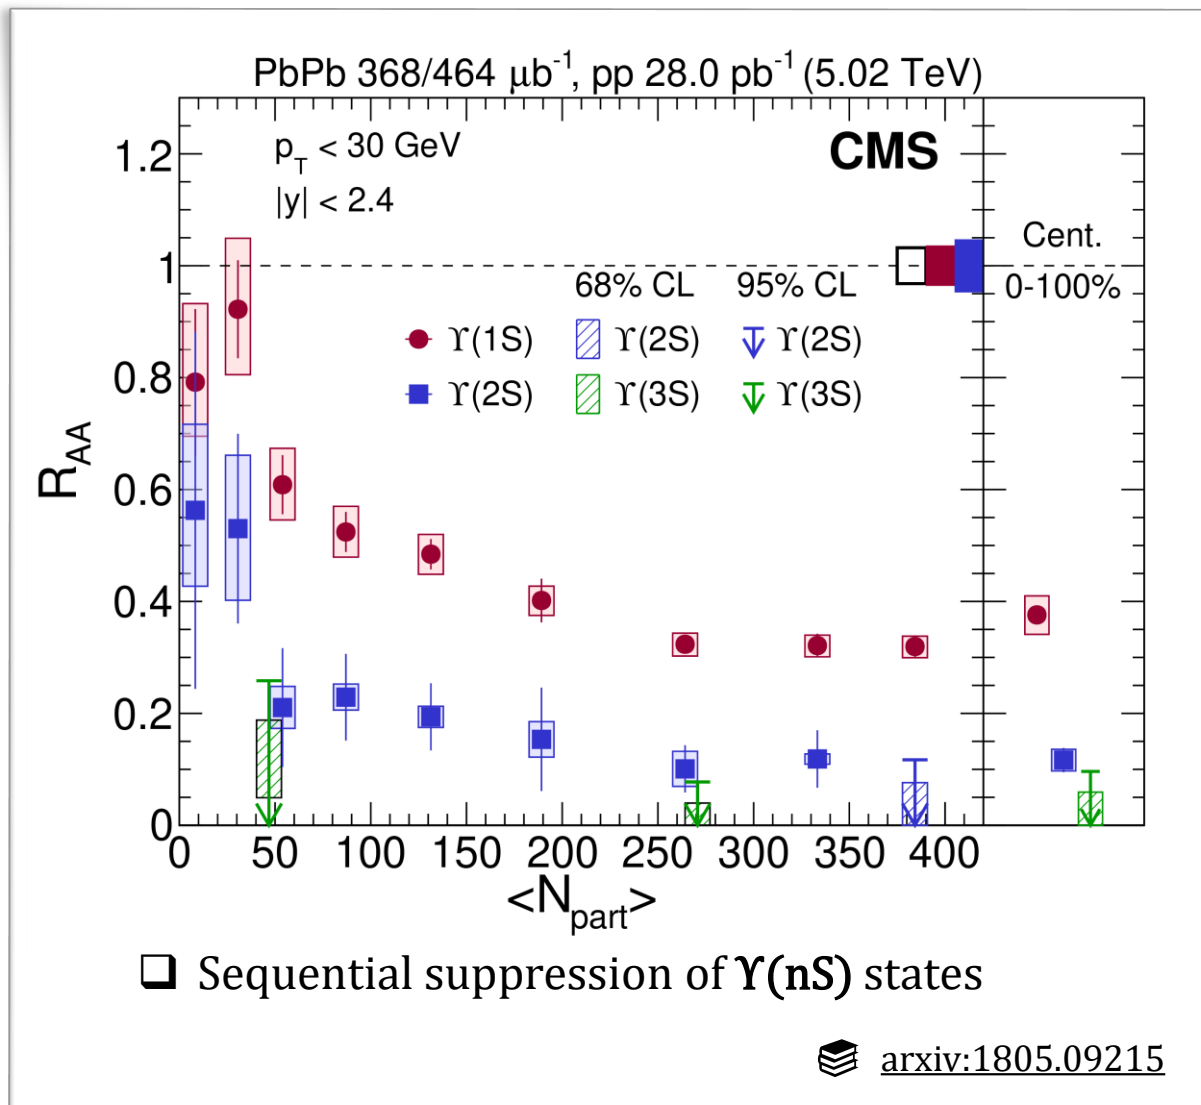

[EPJC 78 \(2018\) 171](#)

[JHEP 04 \(2014\) 103](#)

# Nuclear modification factor

**Nuclear modification factor ( $R_{AA}$ ):** quantifies the modification induced by a medium on the quarkonium production

$$R_{AA} = \frac{\sigma_{AA}}{N_{\text{coll}} \cdot \sigma_{pp}}$$

- $\sigma_{AA}$  = cross section in AA collisions
- $\sigma_{pp}$  = "reference" cross section in pp
- $N_{\text{coll}}$  = number of collisions

In an ideal world...

$$R_{AA} \begin{cases} = 1 & \rightarrow \text{no medium effect} \\ \neq 1 & \rightarrow \text{medium effect} \end{cases}$$

... but quarkonium production may be modified without QGP formation  $\Rightarrow$  **cold nuclear matter effects**

# Quarkonia in pA collisions

## Nuclear absorption

$q\bar{q}$  pair dissociation induced by the interaction with the nucleons of the colliding nuclei

$\Rightarrow$  negligible at LHC energies!

Important for the study of  
Cold Nuclear Matter effects  
(CNM)

## Energy loss in a cold nuclear matter

The energy lost by partons via small-angle gluon emission determines the modification of the charmonium  $p_T$  spectrum in pA collisions

## Parton shadowing

The nuclear environment determines the PDF modification of nucleons inside nuclei w.r.t. free nucleons

$$R_g^{\text{Pb}} = \frac{\text{PDF in bound Pb nucleus}}{\text{PDF in free nucleon}}$$

---

# Charmonia in p-Pb collisions

---

# J/ψ in p-Pb collisions

## $R_{pPb}$ vs $y$

- Stronger J/ψ suppression at forward rapidity
- $R_{pPb}$  compatible with unity at backward rapidity
- ALICE (inclusive) and LHCb (prompt) results are in fair agreement within a similar kinematic domain
- Good agreement with models including **shadowing**<sup>[1,2,3]</sup>, **CGC**<sup>[4,5]</sup>, **energy loss**<sup>[6]</sup>, **transport models**<sup>[7]</sup> and interaction with **comovers**<sup>[8]</sup>

[1] [arxiv:1707.09973](https://arxiv.org/abs/1707.09973)

[5] [arxiv:1605.05680](https://arxiv.org/abs/1605.05680)

[JHEP 07 \(2018\) 160](https://arxiv.org/abs/1707.09973)

[PLB 774 \(2017\)](https://arxiv.org/abs/1707.09973)

# J/ψ in p-Pb collisions

## $R_{pPb}$ vs $y$

- Stronger  $J/\psi$  suppression at forward rapidity
- $R_{pPb}$  compatible with unity at backward rapidity
- ALICE (inclusive) and LHCb (prompt) results are in fair agreement within a similar kinematic domain
- Good agreement with models including shadowing<sup>[1,2,3]</sup>, CGC<sup>[4,5]</sup>, energy loss<sup>[6]</sup>, transport models<sup>[7]</sup> and interaction with comovers<sup>[8]</sup>

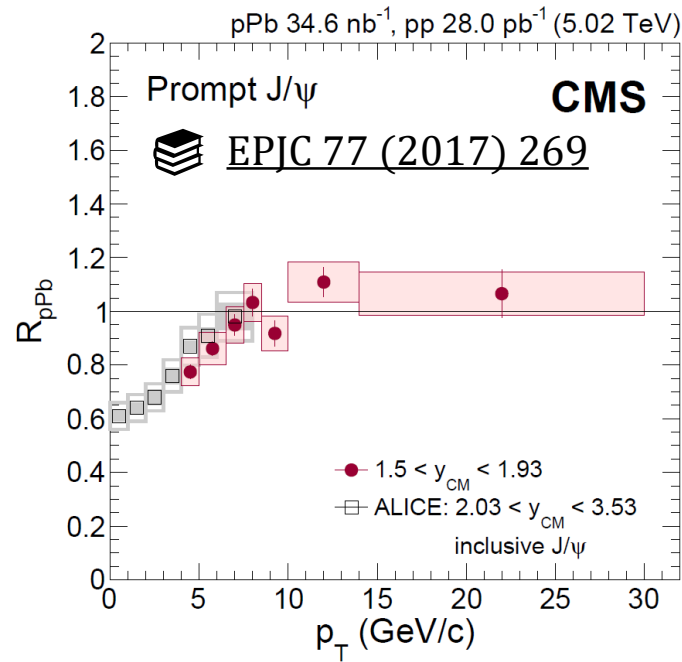

## $J/\psi$ from $b$ hadrons

- No strong dependence of  $R_{pPb}$  vs rapidity
- well described by **FONLL + EPS09NLO**

JHEP 9805:007,1998

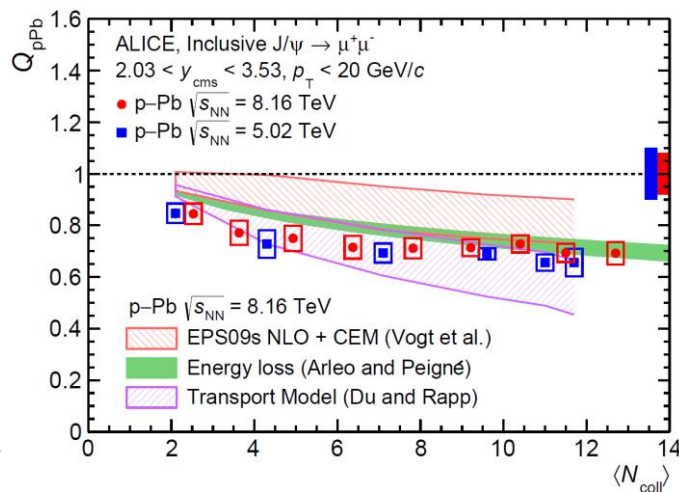

# J/ψ in p-Pb collisions

## $R_{\text{pPb}}$ vs $p_{\text{T}}$

- Low  $p_{\text{T}}$  (ALICE): clear evolution with  $p_{\text{T}}$  at forward and backward rapidity
- High  $p_{\text{T}}$  (CMS):  $R_{\text{pPb}}$  does not show a strong dependence on the  $p_{\text{T}}$

# J/ψ in p-Pb collisions

JHEP 2009 (2020) 162

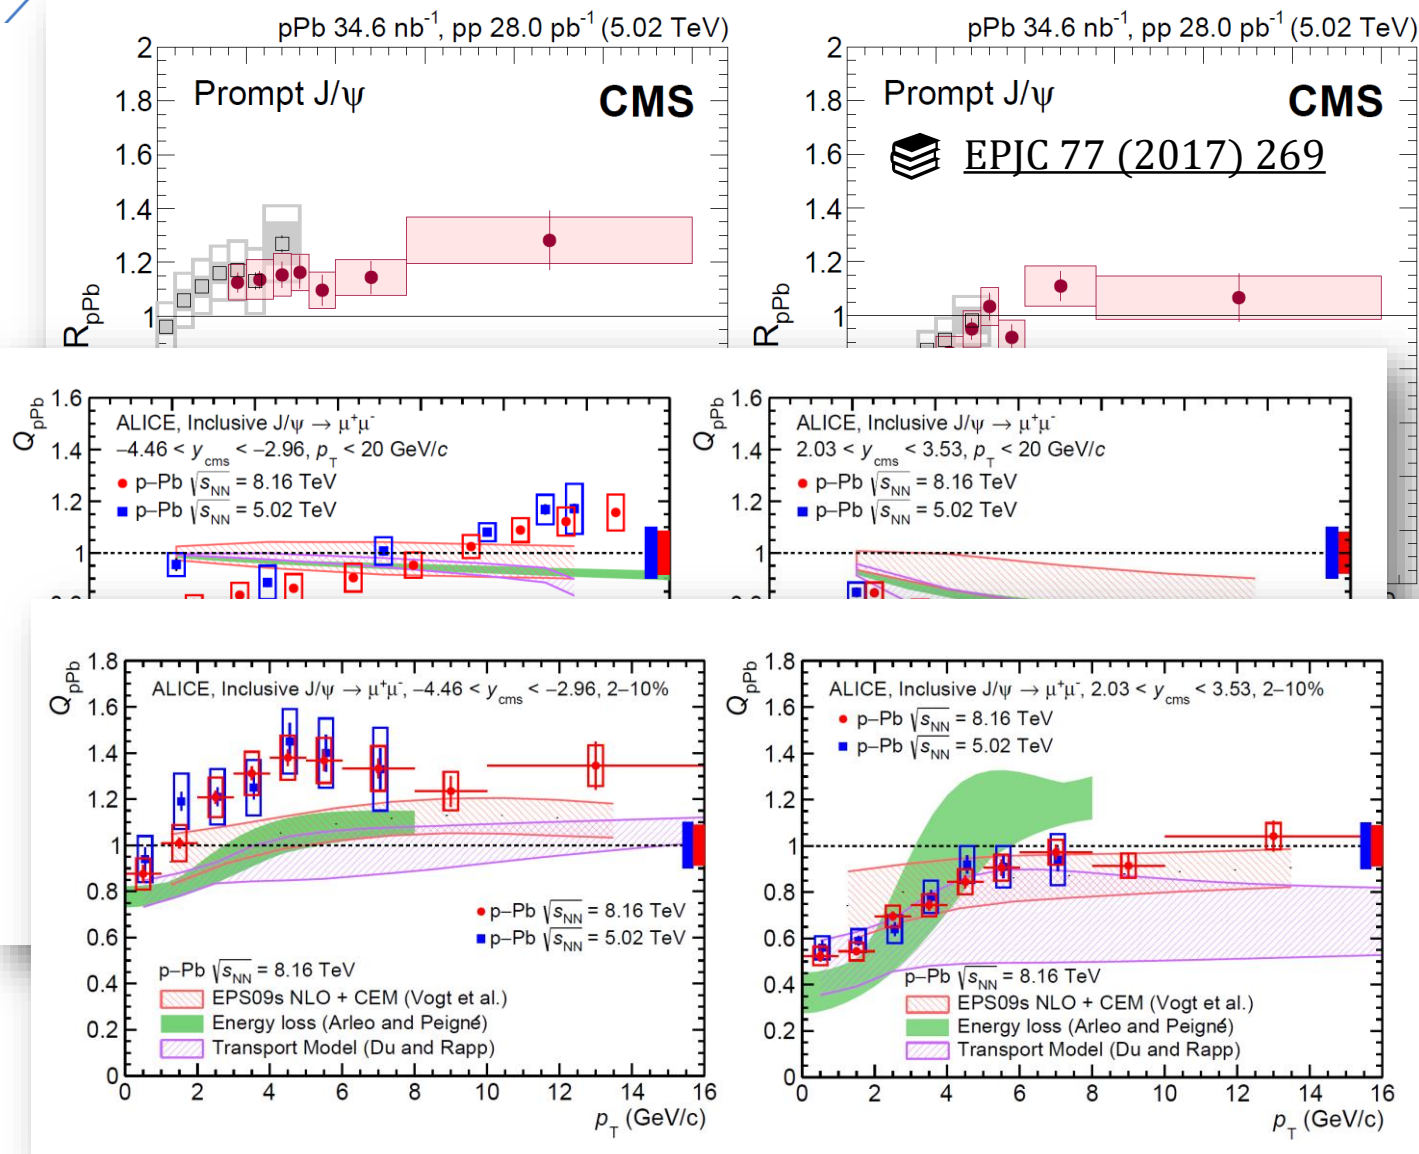

## $R_{pPb}$ vs $p_T$

- Low  $p_T$  (ALICE): clear evolution with  $p_T$  at forward and backward rapidity
- High  $p_T$  (CMS):  $R_{pPb}$  does not show a strong dependence on the  $p_T$

## $R_{pPb}$ vs centrality

- Opposite trend at backward (increase) and forward rapidity(decrease)
- Backward rapidity: some tension with data and theoretical models

# J/ψ in p-Pb collisions

## $R_{pPb}$ vs $p_T$

- Low  $p_T$  (ALICE): clear evolution with  $p_T$  at forward and backward rapidity
- High  $p_T$  (CMS):  $R_{pPb}$  does not show a strong dependence on the  $p_T$

## $R_{pPb}$ vs centrality

- Opposite trend at backward (increase) and forward rapidity(decrease)
- Backward rapidity: some tension with data and theoretical models

➤  $R_{pPb}$   $p_T$  shape for different centrality classes not really described by models

**Comprehensive description of  $p_T$  and centrality is for the moment missing**

# $\psi(2S)$ in p-Pb collisions

## $R_{pPb}$ vs $y$

- Prompt  $\psi(2S)$  shows a similar suppression at forward and backward rapidity
- Prompt  $\psi(2S)$  more suppressed at **backward rapidity** with respect to  $J/\psi$
- Models including **shadowing**<sup>[1,2,3]</sup>, **energy loss**<sup>[4,5]</sup> does not describe this larger  $\psi(2S)$  suppression at backward rapidity

[1] [arxiv:1305.4569](https://arxiv.org/abs/1305.4569)

[3] [arxiv:1301.3395](https://arxiv.org/abs/1301.3395)

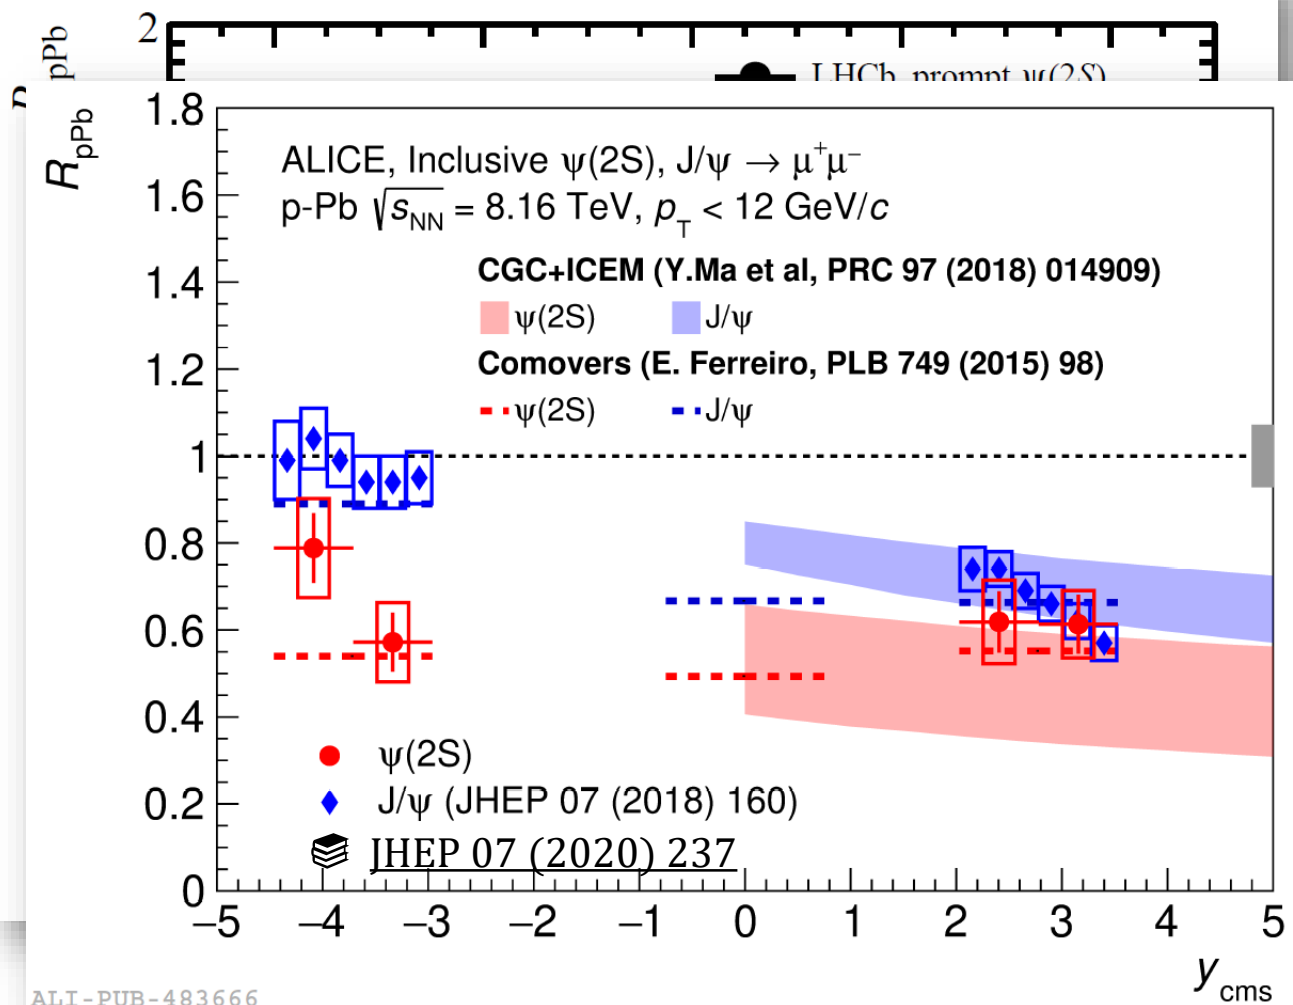

[2] [arxiv:1402.1747](https://arxiv.org/abs/1402.1747)

[4] [arxiv:1212.0434](https://arxiv.org/abs/1212.0434)

[5] [arxiv:1212.0434](https://arxiv.org/abs/1212.0434)

# $\psi(2S)$ in p-Pb collisions

ALI-PUB-483666

## $R_{pPb}$ vs $y$

- Prompt  $\psi(2S)$  shows a similar suppression at forward and backward rapidity
- Prompt  $\psi(2S)$  more suppressed at **backward rapidity** with respect to  $J/\psi$
- Models including **shadowing**<sup>[1,2,3]</sup>, **energy loss**<sup>[4,5]</sup> do not describe this larger  $\psi(2S)$  suppression at backward rapidity

[1] [arxiv:1305.4569](https://arxiv.org/abs/1305.4569)

[3] [arxiv:1301.3395](https://arxiv.org/abs/1301.3395)

[5] [arxiv:1212.0434](https://arxiv.org/abs/1212.0434)

- $\psi(2S)$  is better described by models including **final state effect** interactions as **Comoves**<sup>[1]</sup> and **CGC+ICEM**<sup>[2]</sup>

[1] [arxiv:1411.0549](https://arxiv.org/abs/1411.0549)

[2] [arxiv:1707.07266](https://arxiv.org/abs/1707.07266)

# $\psi(2S)$ in p-Pb collisions

## Double ratio vs centrality

### $p_T < 20$ GeV/c (inclusive)

- No evident energy dependence
- Results in agreement with the **Comovers** model

### $8 < p_T < 40$ GeV/c (prompt)

- Slight decrease with increasing centrality
- Similar trend between low  $p_T$  (backward rapidity) and high  $p_T$  (mid-rapidity)

---

# Bottomonia in p-Pb collisions

---

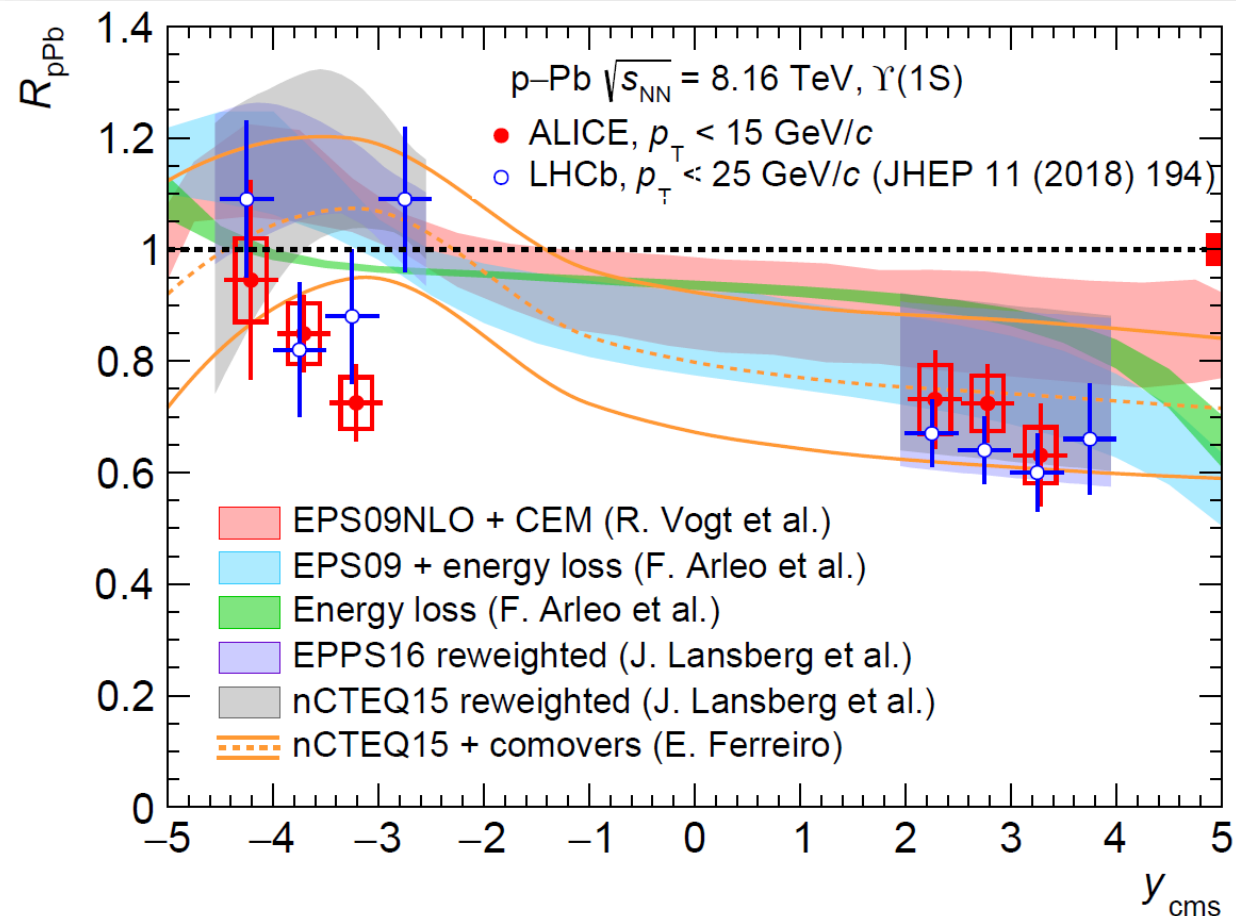

# $\Upsilon(1S)$ in p-Pb collisions

## $R_{pPb}$ vs $y$

- Hint for smaller  $\Upsilon(1S)$  suppression at backward rapidity
- ALICE and LHCb results are in fair agreement within a similar kinematic domain
- Good agreement with models including shadowing<sup>[1,4,5]</sup>, energy loss<sup>[2,3]</sup> and interaction with comovers<sup>[6]</sup>

[JHEP 11\(2018\)194](#)

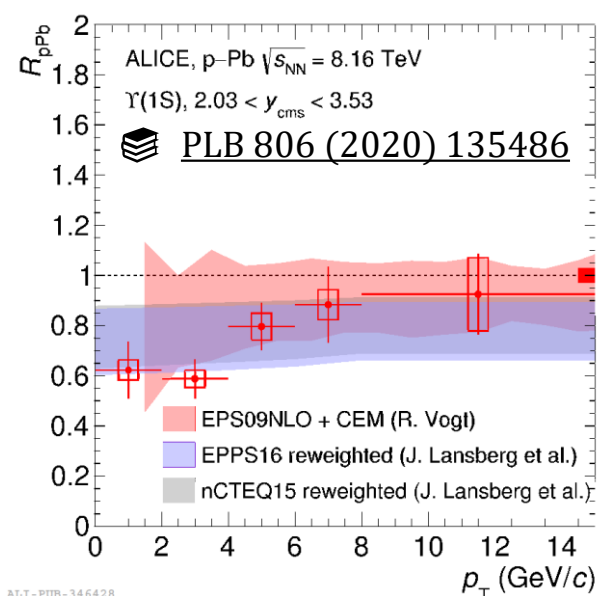

# $\Upsilon(1S)$ in p-Pb collisions

## $R_{pPb}$ vs $y$

- Hint for smaller  $\Upsilon(1S)$  suppression at backward rapidity
- ALICE and LHCb results are in fair agreement within a similar kinematic domain
- Good agreement with models including shadowing<sup>[1,4,5]</sup>, energy loss<sup>[2,3]</sup> and interaction with comovers<sup>[6]</sup>
  - [1] [arxiv:1707.09973](https://arxiv.org/abs/1707.09973)
  - [2] [arxiv:1212.0434](https://arxiv.org/abs/1212.0434)
  - [3] [arxiv:1407.5054](https://arxiv.org/abs/1407.5054)
  - [4] [arxiv:1712.07024](https://arxiv.org/abs/1712.07024)
  - [5] [arxiv:1712.07024](https://arxiv.org/abs/1712.07024)
  - [6] [arxiv:1810.12874](https://arxiv.org/abs/1810.12874)
- No strong rapidity dependence observed by ATLAS ( $p_T < 40$  GeV/c)

# $\Upsilon(1S)$ in p-Pb collisions

## $R_{pPb}$ vs $p_T$

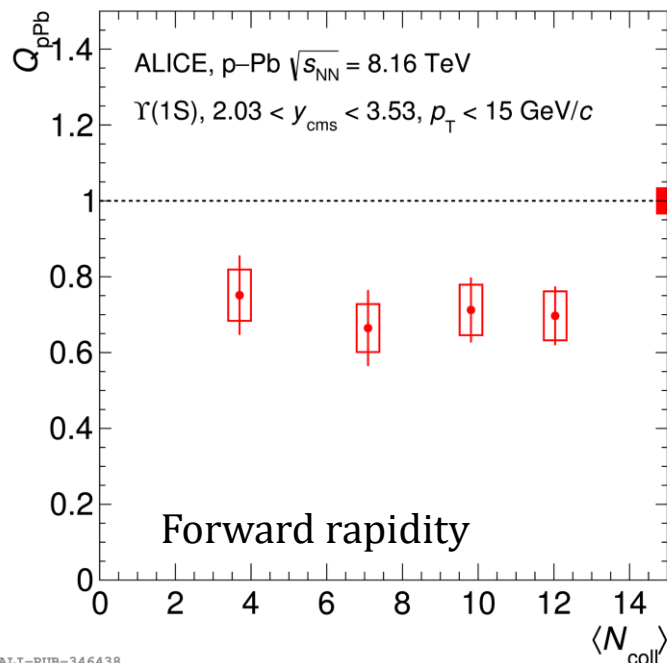

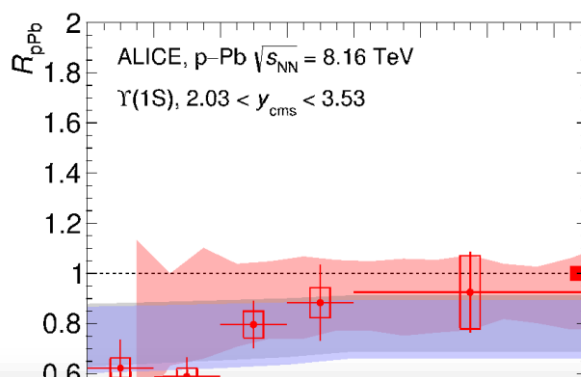

- Similar behavior at forward (ALICE) and at mid-rapidity (ATLAS)
- Larger suppression at low  $p_T$
- The trend as a function of  $p_T$  is in qualitative agreement with models including **shadowing**<sup>[1,2,3]</sup>

[1] [arxiv:1707.09973](https://arxiv.org/abs/1707.09973)

[3] [arxiv:1712.07024](https://arxiv.org/abs/1712.07024)

[2] [arxiv:1712.07024](https://arxiv.org/abs/1712.07024)

# $\Upsilon(1S)$ in p-Pb collisions

## $R_{pPb}$ vs $p_T$

- Similar behavior at forward (ALICE) and at mid-rapidity (ATLAS)
- Larger suppression at low  $p_T$
- The trend as a function of  $p_T$  is in qualitative agreement with models including **shadowing**<sup>[1,2,3]</sup>

[1] [arxiv:1707.09973](https://arxiv.org/abs/1707.09973)

[3] [arxiv:1712.07024](https://arxiv.org/abs/1712.07024)

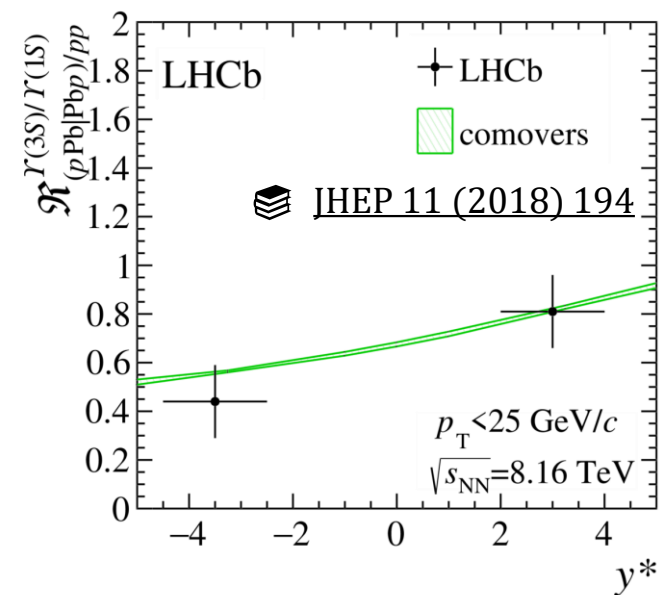

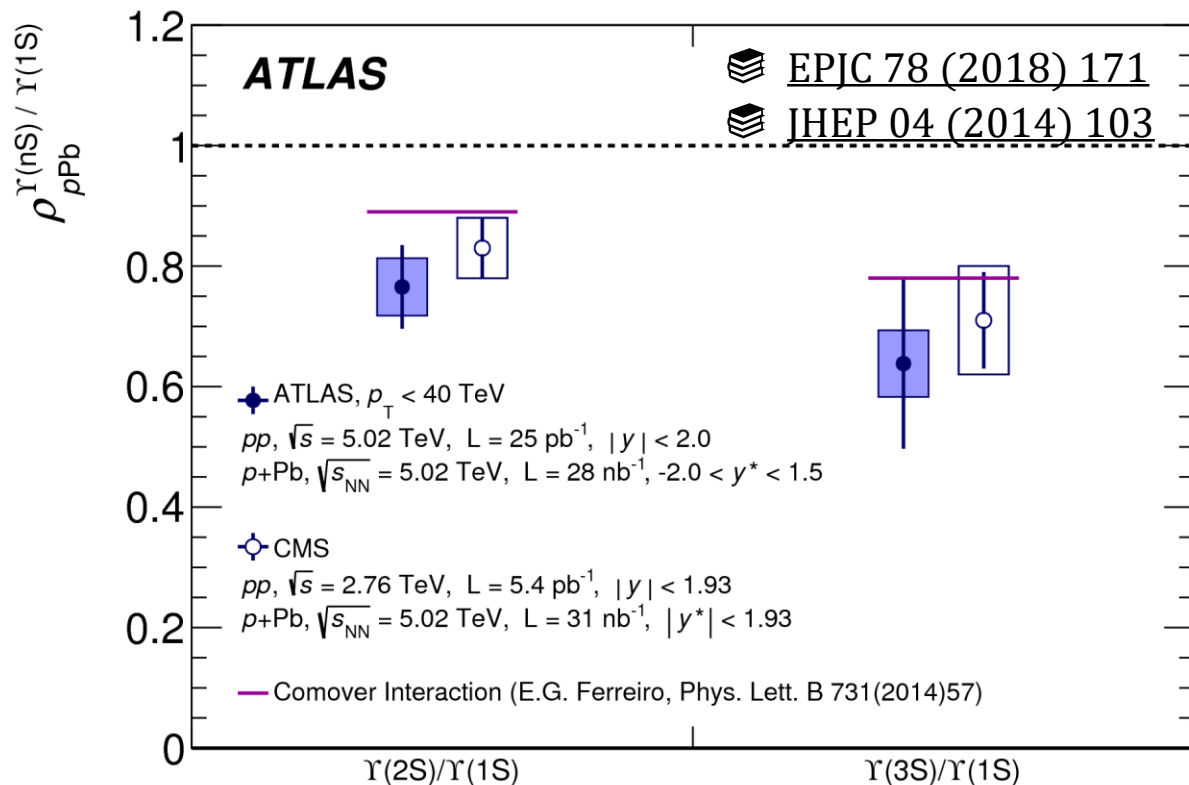

[2] [arxiv:1712.07024](https://arxiv.org/abs/1712.07024)

## $R_{pPb}$ vs centrality

- No visible centrality dependence at backward and forward rapidity

# $\Upsilon(nS)$ in p-Pb collisions

## Double ratio

- Indication of larger of  $\Upsilon(2S)$  and  $\Upsilon(3S)$  suppression w.r.t.  $\Upsilon(1S)$
- Results are in agreement with the **Comover model** at forward (**LHCb**) and at mid (**CMS, ATLAS**) rapidity

## $J/\psi$ and $\psi(2S)$ production as a function of $p_T$ , $y$ and centrality

- Larger  $J/\psi$  suppression at backward rapidity in agreement with models including **shadowing**, **energy loss**, **transport models** and **comovers** interaction
- Some tension between data and models for the results as a function of centrality and  $p_T$
- **Final state effects** necessary to explain the larger  $\psi(2S)$  suppression w.r.t.  $J/\psi$

## $\Upsilon(nS)$ production as a function of $p_T$ , $y$ and centrality

- Hint for smaller  $\Upsilon(1S)$  suppression at backward rapidity in agreement with **shadowing**, **energy loss** and interaction with **comovers**
- Similar behavior as a function of  $p_T$  at forward and mid rapidity
- No visible centrality dependence at backward and forward rapidity
- Hint of larger of  $\Upsilon(2S)$  and  $\Upsilon(3S)$  suppression w.r.t.  $\Upsilon(1S)$
