

RICH, activities during Shut-down 2021-2022

RICH ACTIVITY during SHUT-DOWN

RADIATOR GAS

- Complete **C4F10 cleaning** (still ~400 kg to be cleaned)
 - Cleaning protocol ready, thank to 2021 effort
 - To be compared with the amount of C4F10 cleaned in 2021:
~730 kg
- If manpower available, **perform a campaign of gas leakage checks**

RICH ACTIVITY during SHUT-DOWN

PHOTON DETECTORS

- Extract the status of the detectors & front-end electronics from September 2021 data
- Setting-up of gaseous Photon Detector electronics
 - In 2021 difficult because no feedback possible before the real start of data-taking
 - Installation of a continuous D2 lamp for illumination of (at least part of) the chambers to perform electronics setting in a less blind mode
- Setting-up of electronics for MAPMTs
 - Torino support needed, also for the diagnostic of the needs
