Control structure design of SIRIUS FP2P2S using EMR approach

System

Specific structure of SIRIUS FP

BSW 42

$$L_{hf} = 40\mu\text{H}$$

$$C_1 = 47\mu\text{F}$$

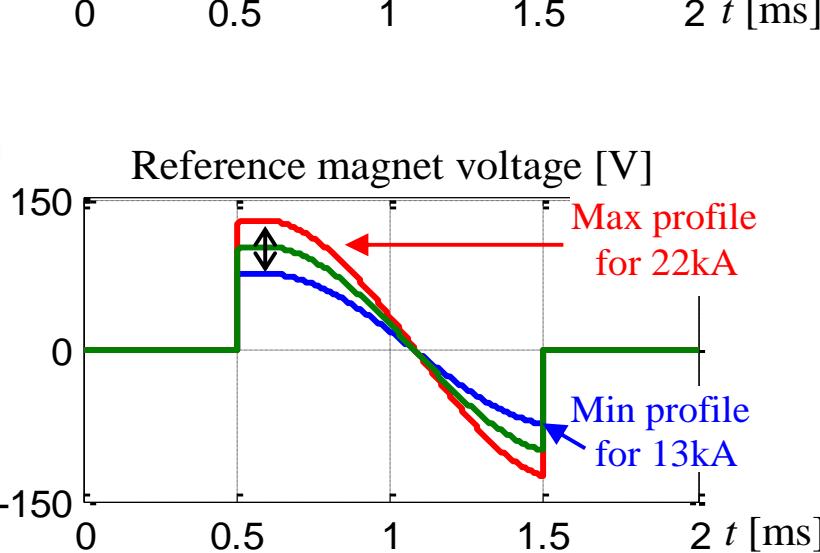

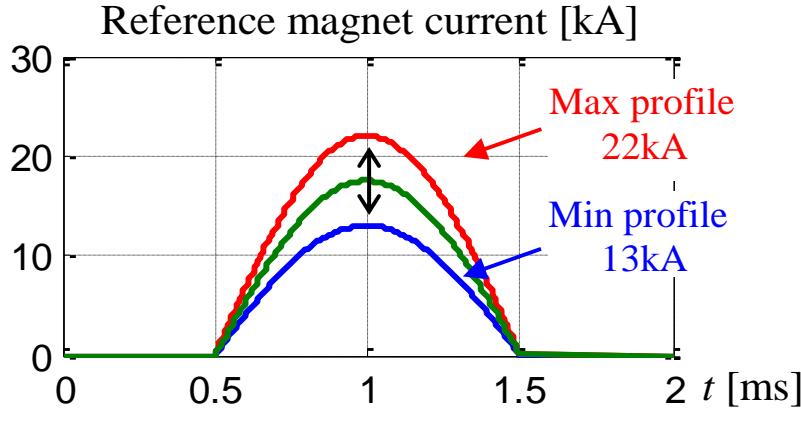

$$C_2 = 140\mu\text{F}$$

$$R_{hf} = 620\text{m}\Omega$$

$$L_m = 1.87\mu\text{H}$$

$$R_m = 1.6\text{m}\Omega$$

Output Diode-Thyristor

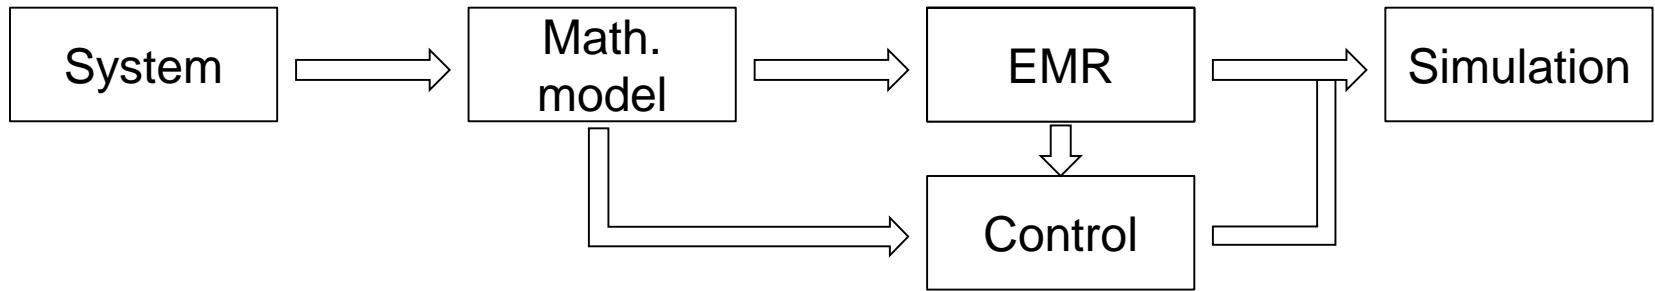

Thyristor: Allows voltage step

Diode: Avoid negative current during the opening time of the thyristor

EMR and Control

Description tool and EMR

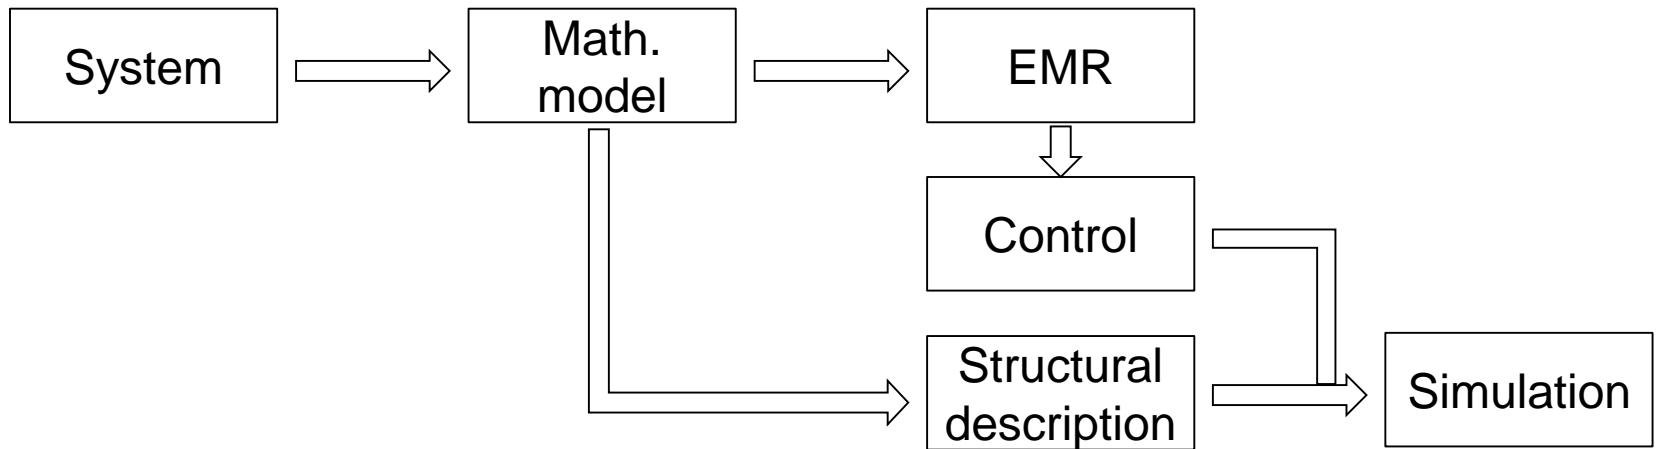

Description tool =>

- Simplify the interconnection between sub-models
- Analyse state variables / energetic flows...

EMR Description tool =>

- Allow interconnection following causality principle
- Highlight action/reaction principle (energetic flows)
- Systematic control structure design

Structural / Functional description

Structural description

=> organisation following real structure

Functional description

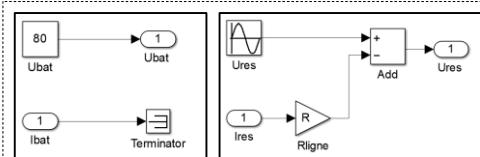

=> organisation following energetic function

With current simulator based on 'structural description' (Simplorer, SimPowSyst)

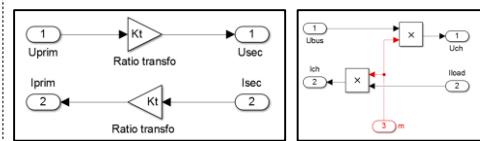

=> Fast simulation files design, Large components library available,
Easy to modify models (add phenomena)

EMR is a functional description tool

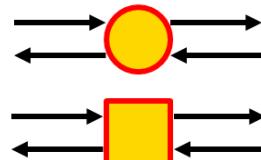

EMR pictograms

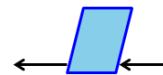

Power Source

Power conversion

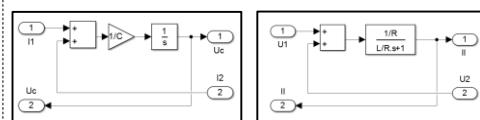

Direct inversion

$$\begin{cases} U_{sec} = K_t U_{prim} \\ I_{prim} = K_t I_{sec} \end{cases}$$

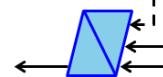

$$U_{prim_ref} = \frac{1}{K_t} U_{sec_ref}$$

Energy accumulation

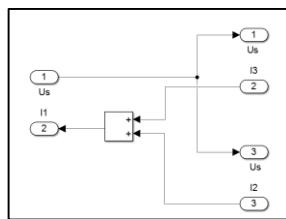

Closed-loop control

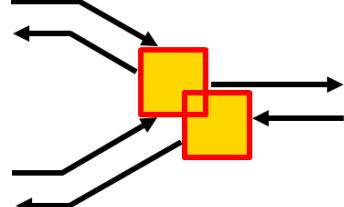

$$I_L = \frac{1}{L_m \cdot s + R_m} (U_1 - U_2)$$

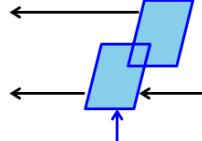

$$U_{1_ref} = \left(k_p + \frac{k_i}{s} \right) (I_{L_ref} - I_L) + U_2$$

Power distribution

Inversion with distribution criteria

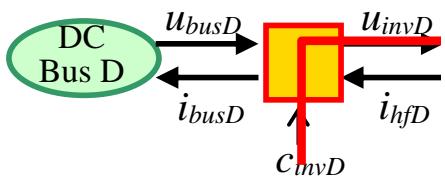

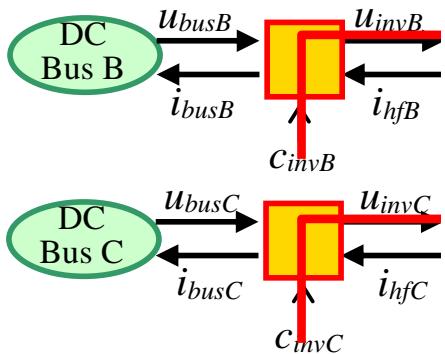

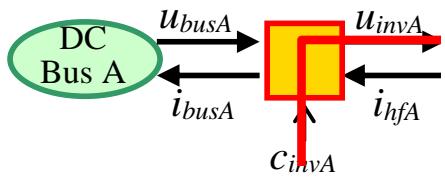

$$I_1 = I_1 + I_2$$

$$\begin{cases} I_{2_ref} = k_d I_{1_ref} \\ I_{3_ref} = (1 - k_d) I_{1_ref} \end{cases}$$

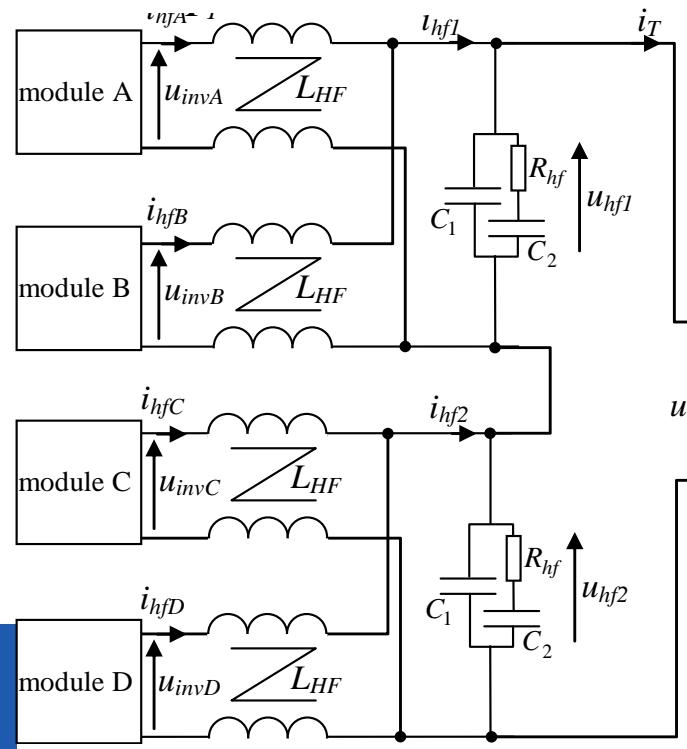

Modelling, EMR and Control (IBC)

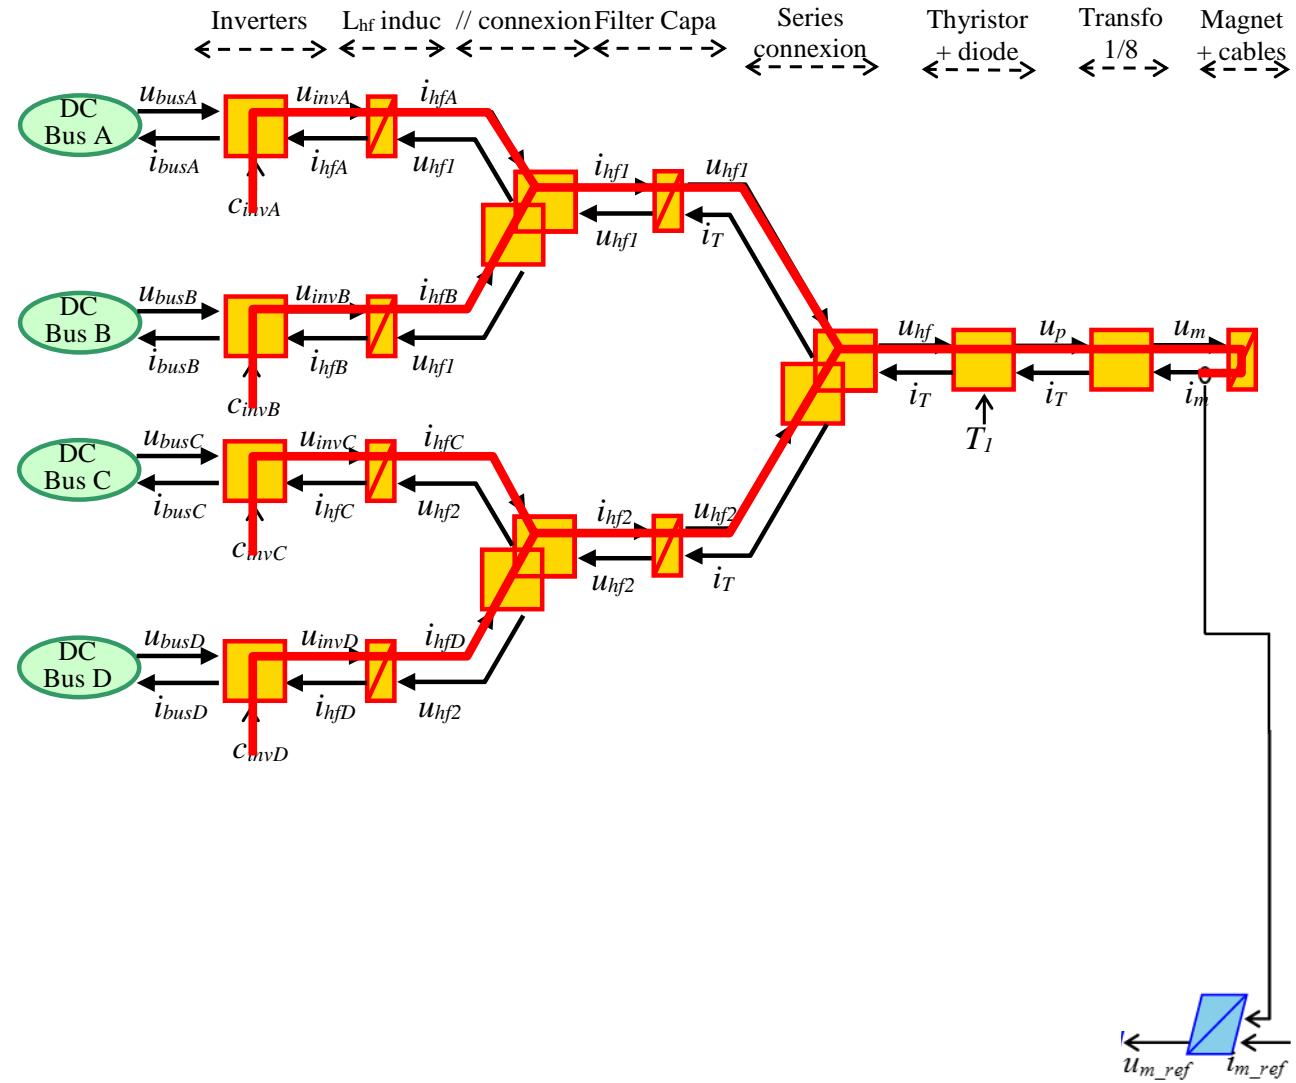

EMR

Inverters

— Tuning path

Control

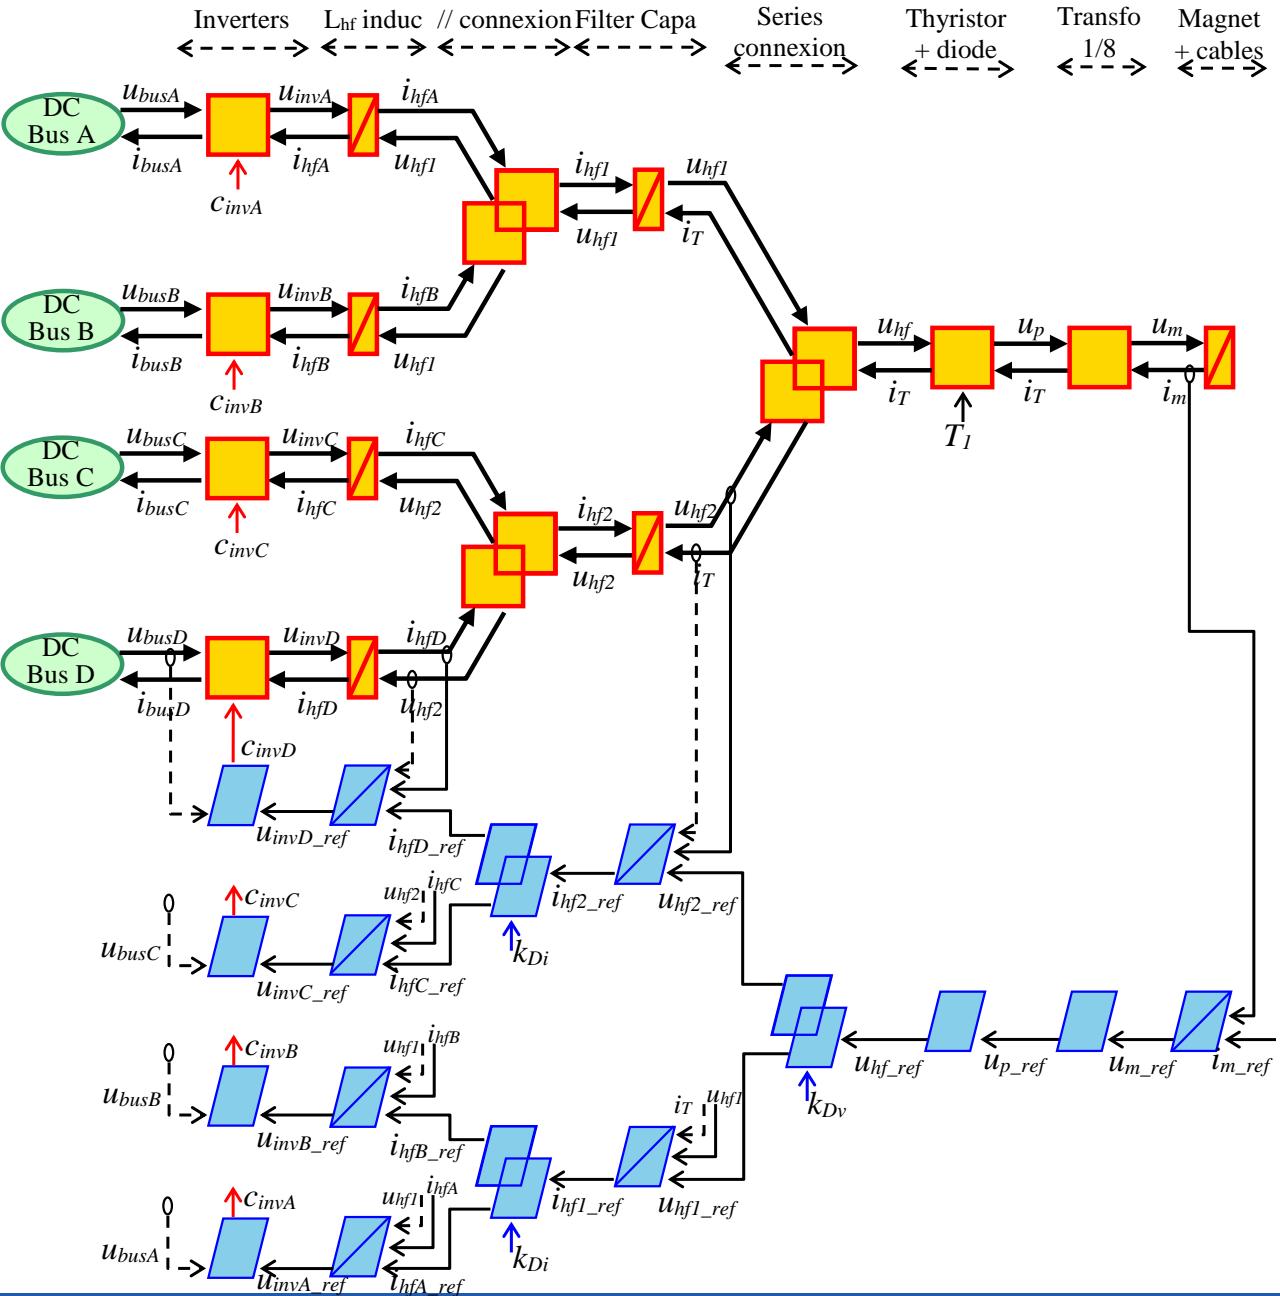

IBC

All control loops are designed independently

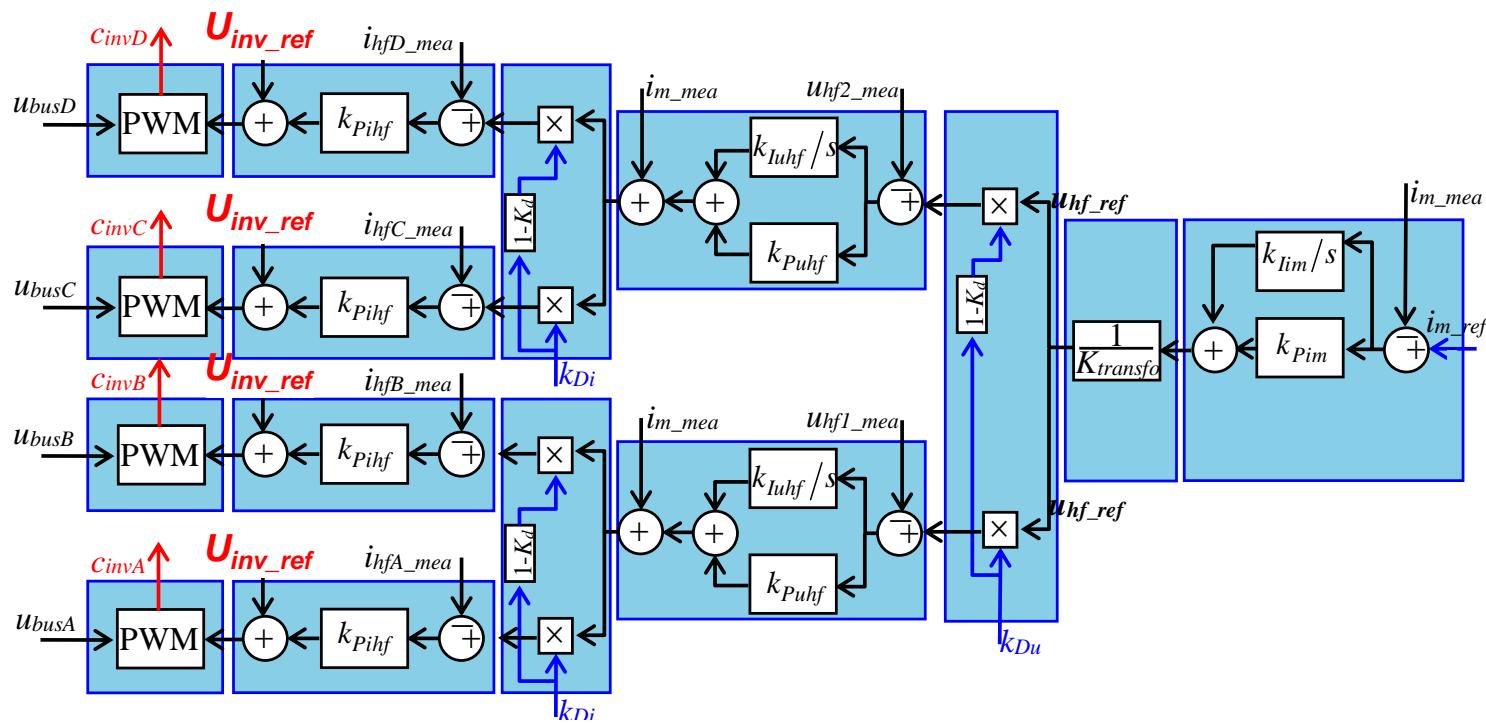

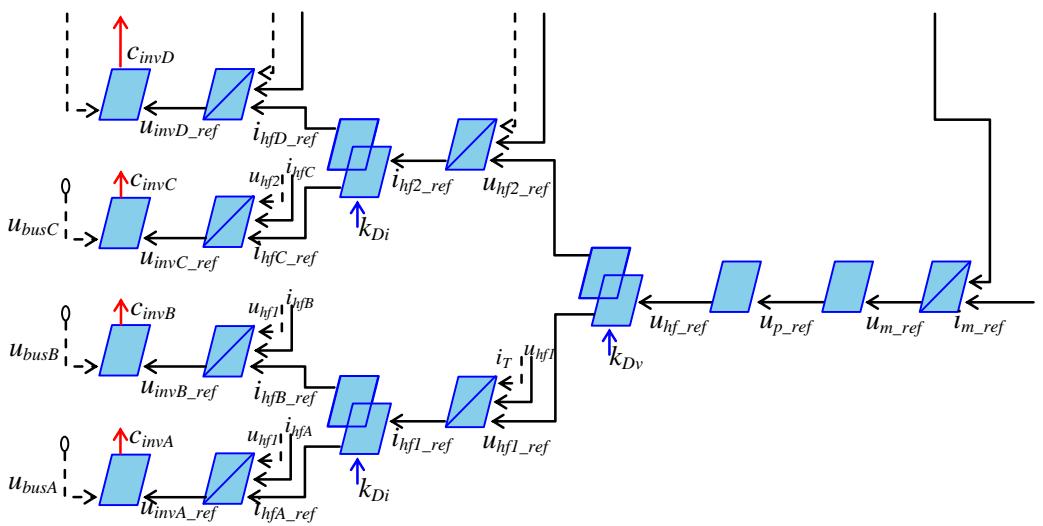

Param of invereted model Desired local performance

Possibility to test each loop progressively

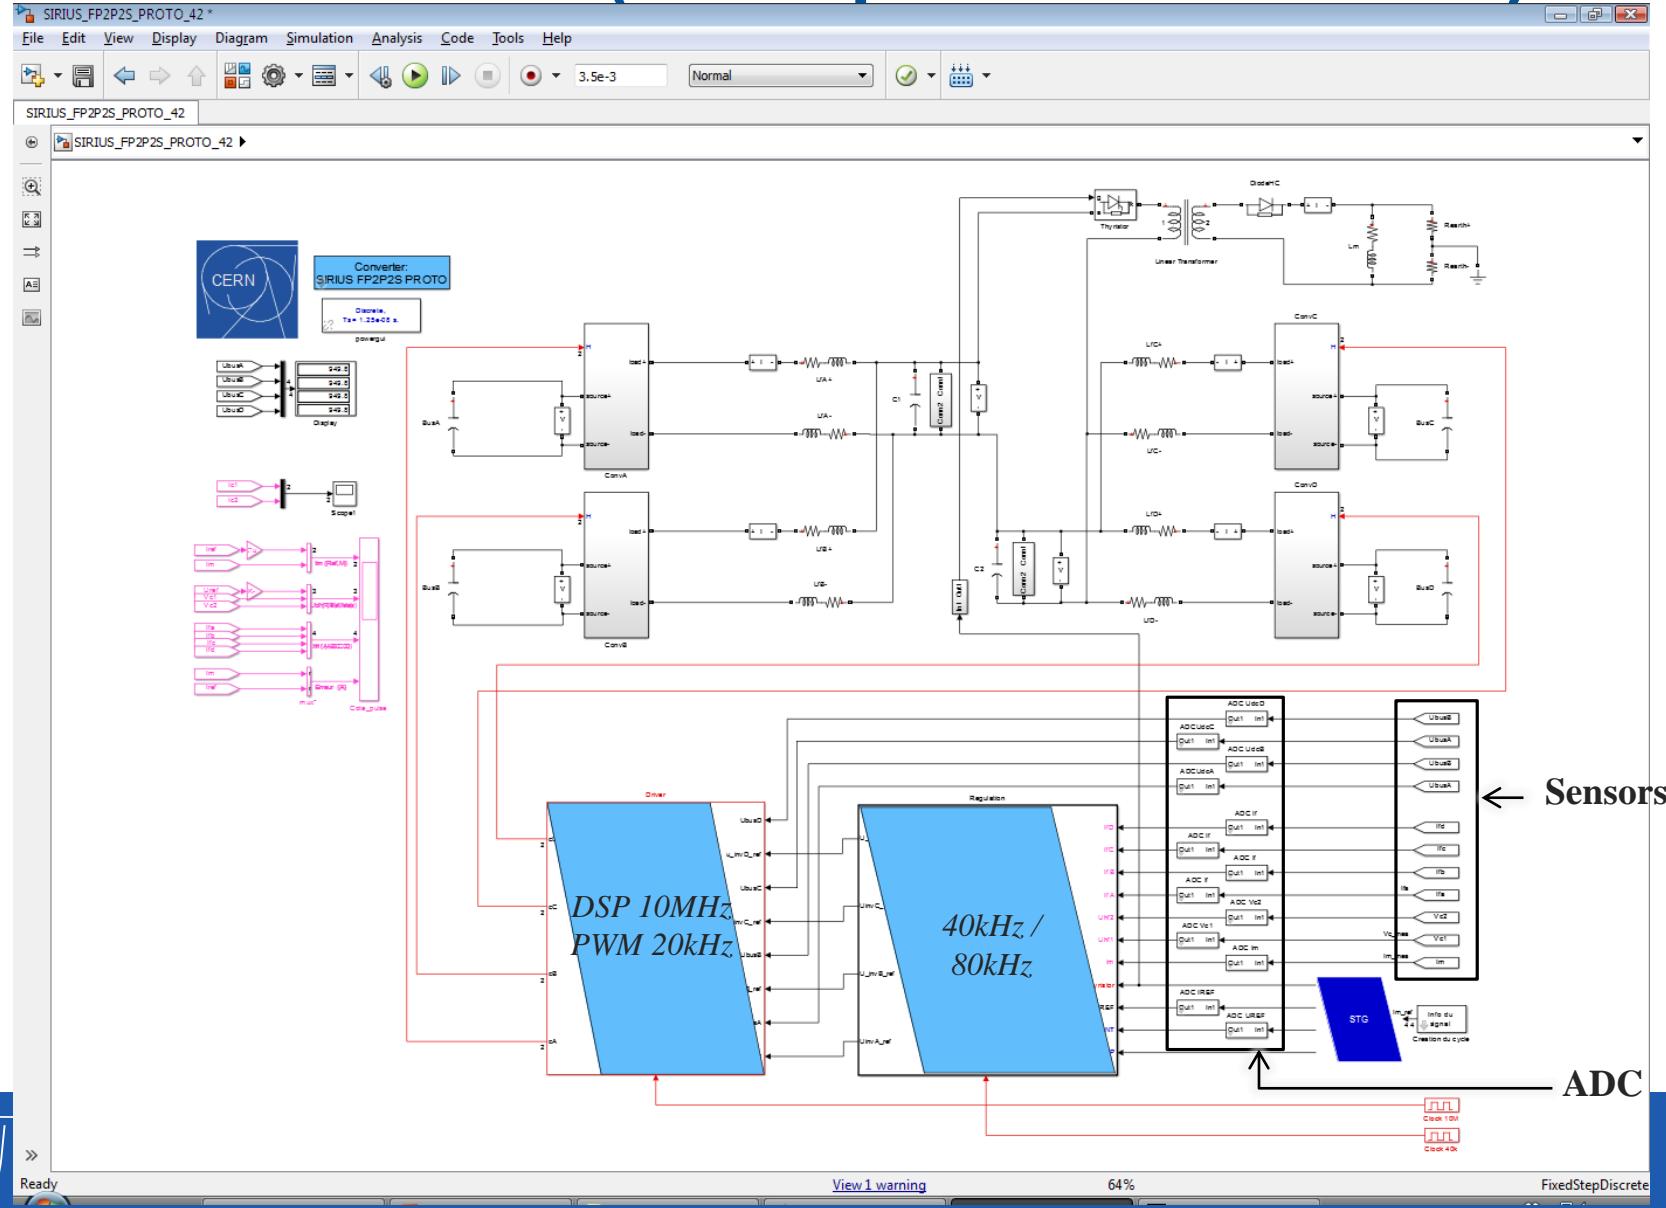

Constraint: Each loop must respects the dynamics separation criteria

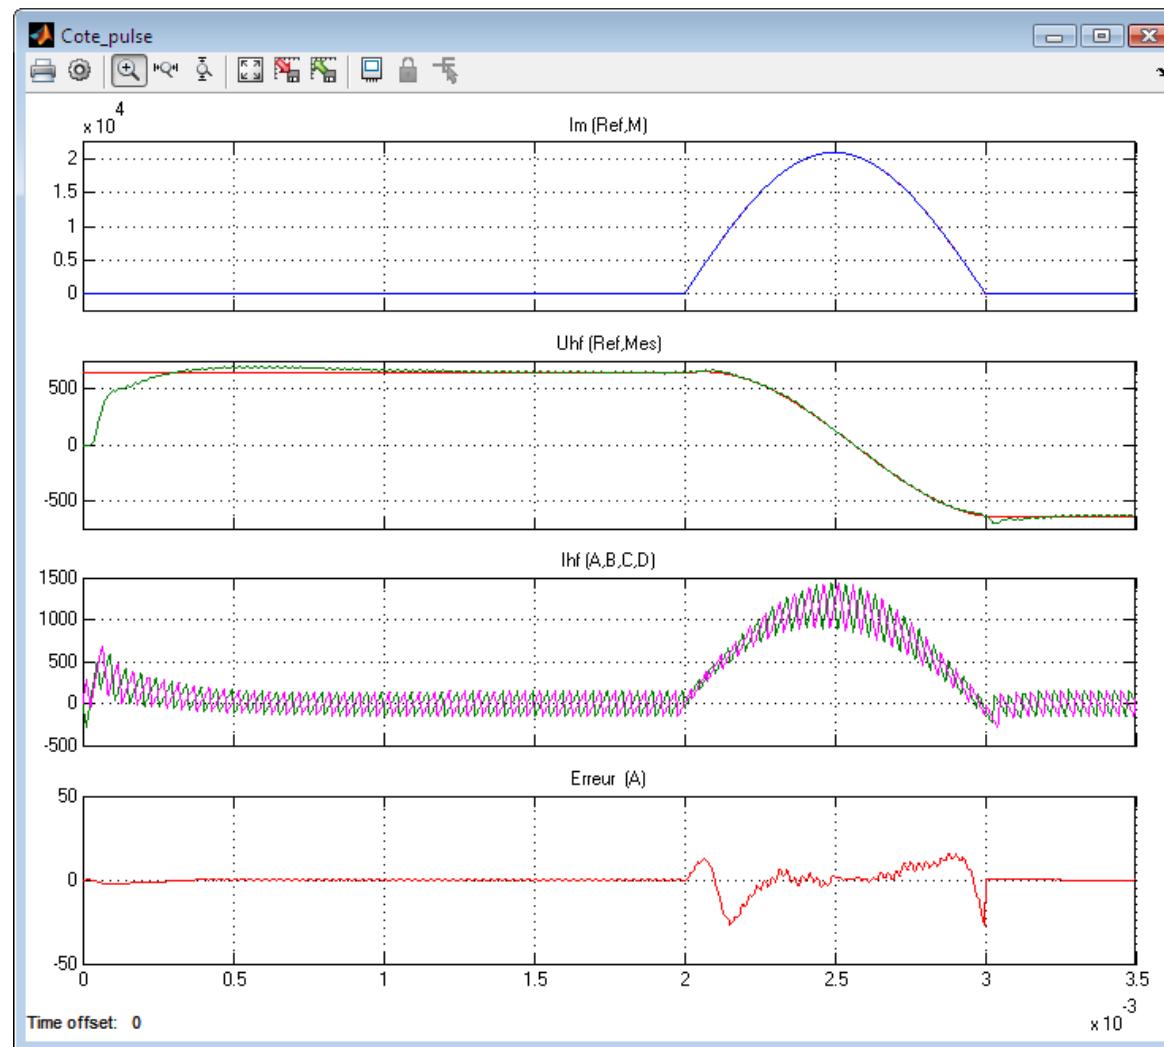

Regulation

Simulation (Simpower - IBC)

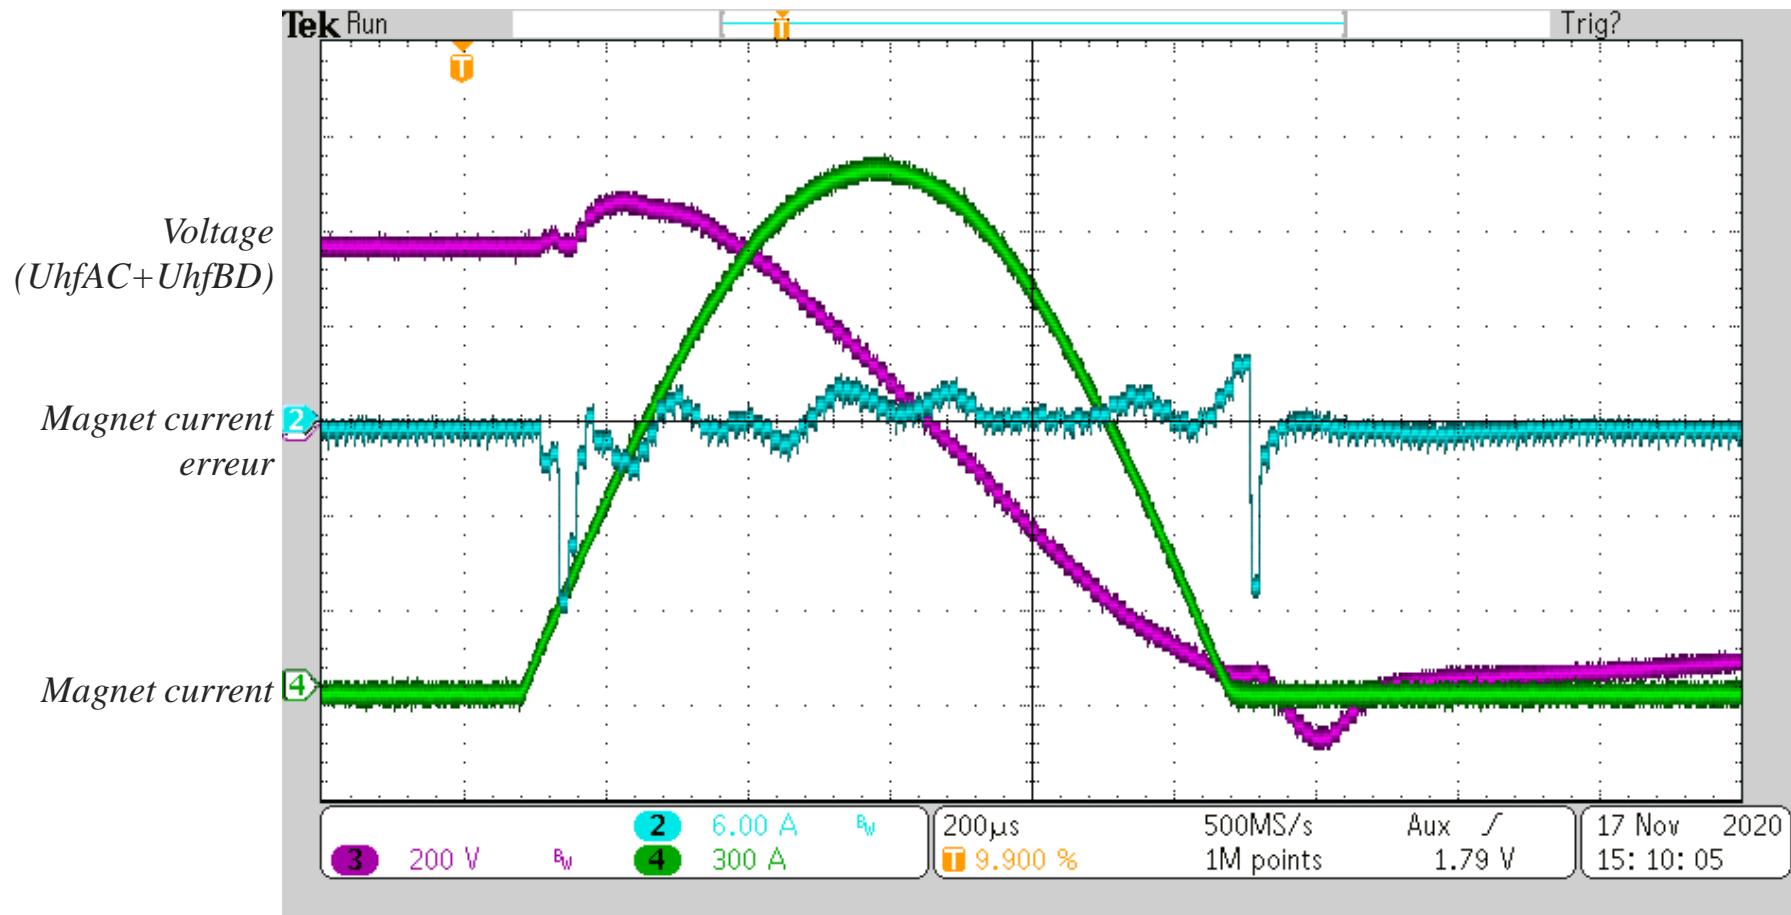

Simulation results (Simpower-IBC)

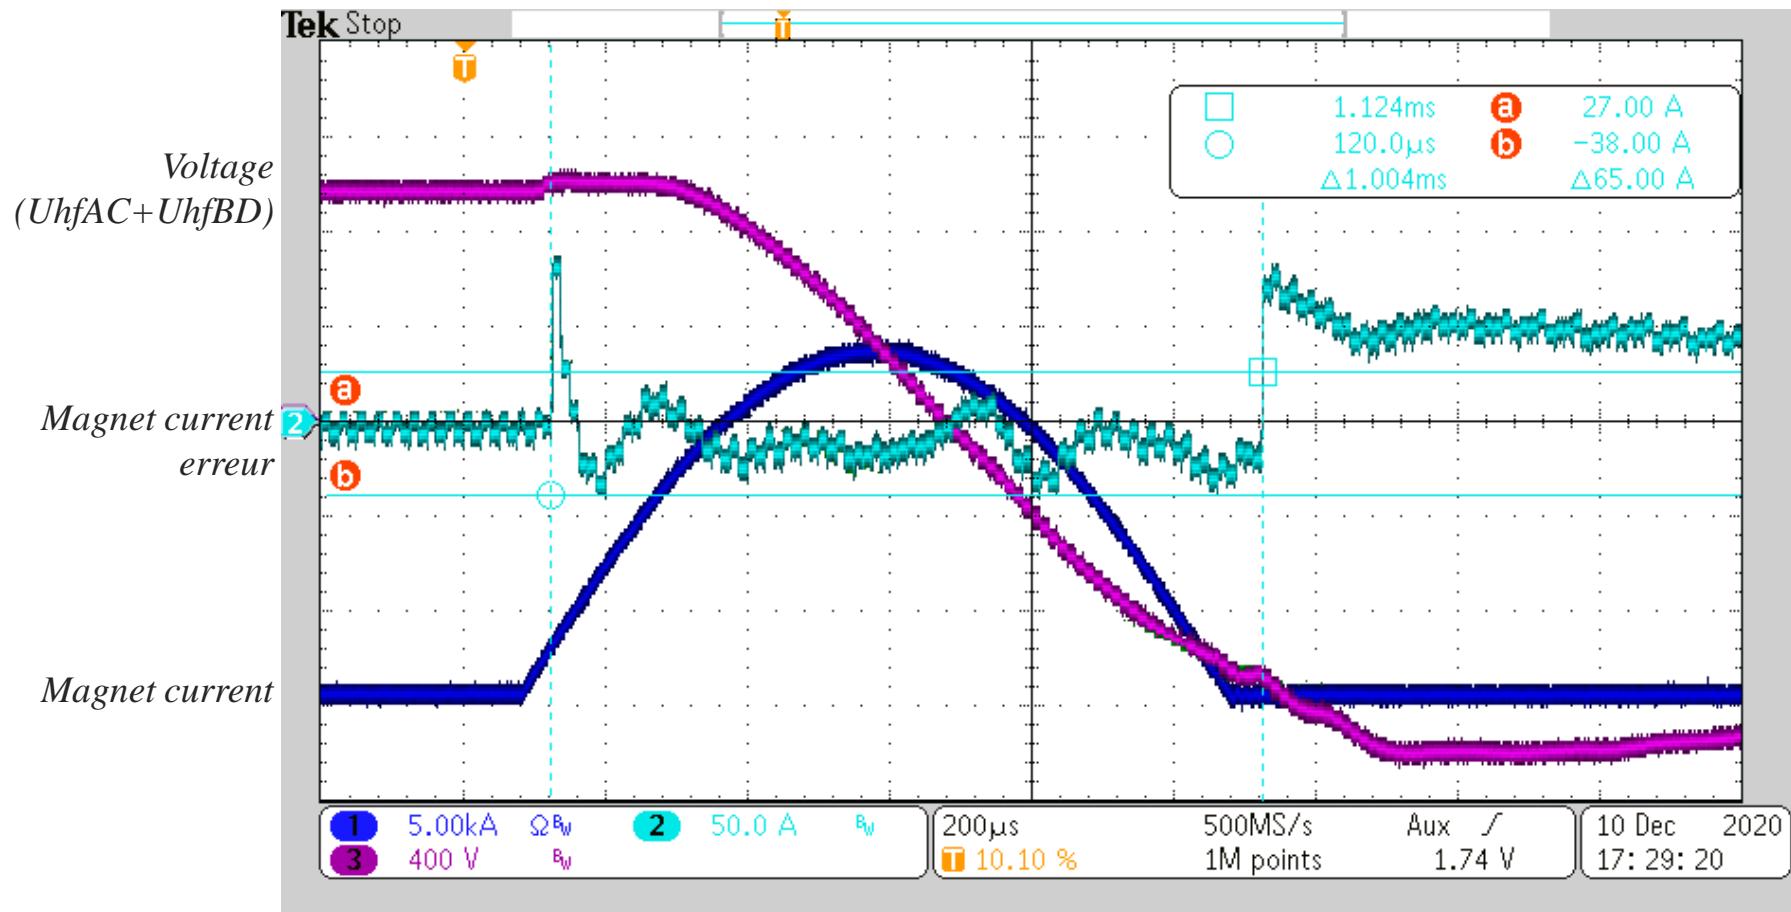

Implementation

Experimentation 1678A

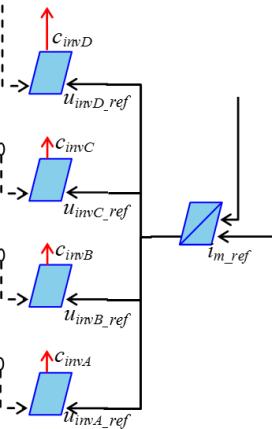

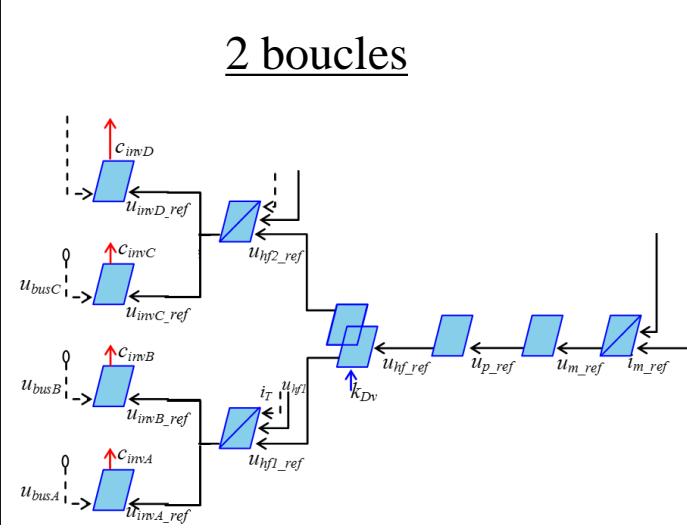

Experimentation 18 kA

Comparisons

Amplitude	1 boucle	2 boucles	3 boucles
1750 A	1.54%	0.68%	0.28%
2000A	1.67%	0.72%	0.22%
2250A	2.08%	0.6%	0.25%
2500A	2.4%	0.736%	0.30%
