CERN Cloud Infrastructure status update

Thursday 18 March 2021 09:20 (25 minutes)

CERN's private OpenStack cloud offers more than 300,000 cores to over 3,400 users that can programatically access resources like compute, multiple storage types, baremetal, container clusters, and more.
CERN Cloud Team constantly works on improving these services while maintaining stability and availability that is critical for many services in IT and the experiment workflows.
This talk will cover the updates done on CERN Cloud over the past months, current status and further plans.
