## **AC-LGAD sensors for low-mass, low power high precision particle tracking**

*Wednesday, 17 March 2021 10:12 (15 minutes)*

In the first part of this contribution, the principles of operation of AC-LGAD, the first silicon detector based on resistive read-out, are illustrated. Then, we outline how AC-LGADs can enable the construction of a low-mass low-power silicon tracker with excellent spatial (2-3 microns/hit) and temporal (20 ps/hit) resolutions.
