

Removing BDII usage in SSM & APEL client

- For SSM: `/etc/apel/sender.cfg`
 1. In the [broker] section comment out 'bdii' and 'network'
 2. Set "host:" and "port:" to either of:
 - broker-prod1.argo.grnet.gr:6162
 - mq.cro-ngi.hr:6162
- For APEL: `/etc/apel/client.cfg`
 1. In the [spec_updater] section set 'enabled' to 'false'
 2. Set benchmarks manually with `manual_specN` variables.
 - <https://github.com/apel/apel/blob/dev/conf/client.cfg#L28>
 - N.B. names needs to match the ceIDs from CE logs
